BISWAJIT SAHOO

PYTHON TEST ENGINEER | ATOS GLOBAL IT SOLUTIONS

Bangalore, India | +91 9861795923 | sahoo.biswajit0003@gmail.com

CAREER SUMMARY:

Detail-oriented and highly skilled Python Test Engineer with 4+ years of hands-on experience in automated testing using Selenium, Pytest, and Robot Framework. Proficient in UI and API testing, test planning, and defect management across agile environments. Seeking to leverage strong technical expertise and problem-solving abilities to ensure high-quality software delivery and contribute to continuous improvement in a dynamic organization.

TECHNICAL SKILLS

- 4+ years of Experience in Software Automation Testing Using Black Box Technique.
- Clear understanding of Software Development Life Cycle models (SDLC)
- Involved in the Designing, and Execution of the test cases.
- Through knowledge of software testing methodologies including Sanity, Smoke, Functional, Retesting, Regression, Browser Compatibility, Integration, Usability, and GUI testing of an Application.
- Knowledge of software testing methodologies including Sanity, Smoke, Functional, Retesting, Regression, Browser Compatibility, Integration, Usability, and GUI testing of an Application.
- Involved in review of test cases.
- UI automation testing involves testing the graphical user interface (GUI) of an application to ensure that it functions correctly from the end-user perspective.
- (Selenium WebDriver) and Framework use Pytest and Robot Framework.
- Knowledge about software quality assurance, ISO, CMM Levels, AGILE methodology.
- Combining UI and API automation testing provides comprehensive test coverage, ensuring both the frontend and backend components of the application are thoroughly tested.
- Involved in Review of Test Cases.
- Expertise in resolving bugs and issues with developers.
- Logged and tracked defects using defect management tools such as ALM 11 and Jira.
- Involved in UI and API Testing.
- Good knowledge of UNIX.
- Experience in testing web based application.
- Good interpersonal skills &Learn new technologies and undertake challenges.
- Prepared mapping sheet of SRS and test case.
- Write UNIX command to Verify Response file in putty.
- Discuss with client and BA to clear the requirements Complexity.
- Good communication, collaboration with proficiency at grasping new technical concepts quickly and utilize the same in a productive manner.

SKILLS

Testing Expertise

- Web Testing
- API Testing
- UI Testing
- Manual Testing
- Security Testing
- Performance Testing
- Regression Testing
- Cross-Platform Testing

Automation Frameworks & Tools

- Selenium
- Rest-assured
- Robot Framework
- Pytest
- Playwright (Javascript)
- Cypress
- JMeter
- Postman
- TestScript
- UI Automation
- BDD / TDD
- Cucumber

Programming & Scripting

- Python
- Unix
- SQL Server
- MySQL Development

DevOps & CI/CD

- CI/CD
- AWS Cloud
- Docker
- Jenkins
- GitLab
- Git

Defect Tracking and Management

- Jira
- Agile & Scrum
- ALM

PROFESSIONAL EXPERIENCE:

Atos Global IT Solutions | Software Test Engineer | May 2021 - Present

WORKED DOMAINS:

- **Payments:**
  Payment terminals, Card networks (VisaNet, Banknet), Acquiring bank & Issuing bank, Merchant & Cardholder flow
- **Telecom:**
  OSS-Order management, Telecom Billing-BSS, Card Payment, Amdocs CRM, Salesforce CRM.

PROJECT UNDERTAKEN

Sequence 1:

Project Name: Payment Terminal and 3D Report Analytics
Vertical: Payments
Client: Strip, United States
Technology: Python, Selenium, Playwright, Pycharm, Pytest, Robot-framework, BDD, Cucumber, Kubernate, Azure Devops, Docker, CI/CD-Jenkins, Jmeter, Postman, Manual Testing, API Testing, Rest API, Ui Testing, Rest Assured SQL, Agile Methodology, GIT, Jira .
Business and Technical Flow of Project:

A cardholder begins a credit card transaction by presenting his or her card to a merchant as payment for goods or services.... The acquiring bank (or its processor) captures the transaction information and routes it through the appropriate card network to the cardholder's issuing bank to be approved or declined.4 major actors who are responsible to govern the payment processing. Acquiring Bank (Merchant's Bank). Issuing Bank (Cardholder Bank), Card Associations (Visa and MasterCard), Cardholder, Merchant.

Authorization:

The credit card issuer receives the transaction information from the acquiring bank (or its processor) through Banknet or VisaNet and responds by approving or declining the transaction after checking to ensure, among other things, that the transaction information is valid, the cardholder has sufficient balance to make the purchase and that the account is in good standing. The card issuer sends a response code back through the appropriate network to the acquiring bank (or its processor). The response code reaches the merchant's terminal, software or gateway and is stored in a batch file awaiting settlement.

Credit card clearing and settlement

The acquiring bank (or its processor) reconciles and transmits the batch of authorizations through interchange via the appropriate card association's network (VisaNet or Banknet). The acquiring bank also deposits funds from sales into the merchant's account via the automated clearinghouse (ACH) and debits its merchant's account for processing fees either monthly, daily or both depending on the merchant's processing agreement.

Card Network: The card association debits the issuing bank's account and credits the acquiring bank's account for the net amount of the authorizations which is gross receipts less interchange and network fees.Issuer : The card issuing bank essentially paysthe acquiring bank for its cardholder's purchases. Cardholder : The cardholder is responsible for repaying his or her issuing bank for the purchase and any accrued interest and fees associate with the card agreement.

ROLES AND RESPONSIBILITIES:

- Reviewed Business Requirements, Functional Specifications, and Detailed Design documents (including UML).
- Updated test plans, created test cases and test scenarios for assigned functional areas (including Transact SQL queries for data validation).
- Analyses mapping sheet and verify source and target system.
- Reviewed Business Requirements, Functional Specifications, and Detailed Design documents (including UML)
- Updated test plans, created test cases and test scenarios for assigned functional areas (including Transact SQL queries for data validation).
- Analyses mapping sheet and verify source and target system.
- Use complex queries to check output to ensure it meets the business logic.
- Executed test cases to ensure functionality meets the customer requirement.
- Logged and regressed bugs using HPALM.
- Maintained 12 servers used by the test team (including setup, configuration and change management).
- Performed setup and BVT testing with each build

Sequence 2:

Project Name: Intelligent Business Platform [MS Dynamics]
Vertical: CRM, Telecom
Client: Voice Host, United Kingdom
Business and Technical Flow of Project:

This solution deals below functions -Streamline sales planning with quota and territory management. Empower sellers and leaders to make data-driven decisions with flexible, pre-built dashboards that offer interactive drill-through capabilities and natural language Q&A.

Optimize Customer sales efforts with automation and an event-driven sales process based on best practices. Make it easier for sellers to know what steps to take next to close deals faster with embedded business processes. Increase user adoption with rich, context-sensitive help and guidance across the web and mobile apps. Ease onboarding and align sales behavior with interactive help and documentation. Boost performance, morale, and business application adoption with fun, engaging team based sales contests that energize the entire organization, while holding sellers accountable. Increase user adoption and minimize training with rich, context-sensitive help and an intelligent, event-driven sales process that guides sellers to optimal outcomes.

Accelerate deals with an end-to-end, immersive experience for opportunity management. Use familiar tools like Excel and Outlook for day-to-day sales activities. See the status of cases, all without the hassle of switching apps. Enrich account, contact, and lead data with contextual third-party firmographics, news, and compelling events for both B2B and B2C business models. Work on the go, even without connectivity, with modern mobile apps that provide contextual news, social data, and task flows. Elevate user email communications with embedded intelligence that lets user know when and how customers interact with customer emails, so user can be more proactive and responsive in customer communications.

ROLES AND RESPONSIBILITIES:

- Discuss with Business Analysts to define testing requirements to satisfy the business objectives.
- Creating complete test cases, test plans, test data, and reporting status ensuring accurate coverage of requirements and business processes.
- Experience in SDLC and Agile methodologies such as SCRUM.
- Analyzing requirements and creating and executing test cases
- Involved in Test Case Execution and perform sanity test after receive new build testing
- Performed Integration, End-to-End, system testing.
- Involving in Functional Testing & Regression Testing along with system integration.
- Performed data validation testing writing SQL queries.
- Used HP ALM for creating and documenting Test Plans and Test Cases and register the expected results.
- Using HP ALM forstoring, maintaining the test repository, bug tracking and reporting.
- Experienced in retest the existing test cases with the different kind of source systems for different periods of data.
- Preparing documentation forsome of the recurring defects and resolutions and business comments for those.

EDUCATION

Bhubaneswar College of Engineering, Bhubaneswar (2017)
Graduated in B.Tech (Mechanical) from BPUT with 7.8 CGPA

PERSONAL DETAILS

DOB: 02/06/1992
Place: Dhenkanal, Odisha

DECLARATION

I hereby declare that all the data and information provided above are true and correct to the best of my knowledge and I hold responsible myself for any irregularities if found.
