PROFILE

Passionate QA Professional | 3+ years experience.
Leveraging automation to boost test coverage, speed up releases and deliver rock-solid, bug-free products. Eager to Collaborate, innovate and push boundaries.

TECHNICAL SKILLS

- Core JAVA
- Selenium
- TestNg
- Cucumber
- Playwright-typescript
- GitHub
- CI/CD
- Postman
- Restassured
- Basic SQL & Mongo DB
- JIRA – Agile Methodology

PROFESSIONAL SUMMARY

- Collaborated cross-functional teams.
- Defined digital underwriting requirements.
- Designed comprehensive test cases.
- Validated data and workflows.
- Executed end-to-end testing.
- Reported and tracked defects.

EDUCATION

GURU NANAK COLLEGE

M.Sc Mathematics [**RANK HOLDER**] – (2020 – 2022)

SDNB VAISHNAV COLLEGE FOR WOMEN

B.Sc Mathematics – 85% (2017 – 2020)

CHRIST THE KING SCHOOL

HSSLC – 90% (2017)

WORK EXPERIENCE

M2P FINTECH : [21/9/2022] – [till date]

Role : Software developer Engineering in Testing.

PROJECT 1: SURROGATE ORIGINATING SYSTEM

Project Domain : Web Application (Bank)

Testing Methods : Functional, Smoke, Sanity, API and Regression Testing.

Technologies used : Core JAVA, Maven, TestNg, Cucumber, JIRA, Postman, Restassured.

DESCRIPTION

The Surrogate originating system is a web-based application developed for a bank to streamline and automate the loan and card application process. It provides customer to conveniently submit their loan and card applications, which enabling bank employees to efficiently review and process these. As a QA Engineer, my primary responsibility was to ensure the application's quality, functionality and security.

ROLES & RESPONSIBILITIES

Test planning and strategy:

- Understand the business requirements and translate them into test plans.
- Gain the overall product knowledge and define test strategies

TEST case design & Execution:

- Design details testcases based on user stories
- Execute the manual and automated tests to validate application functionality.
- Identify, document and track defects using tools like JIRA.

Test automation:

- Develops and maintained automated test scripts.
- Integration of automated tests in GitHub actions.

Documentation and Reporting

- Maintain clear document for testcases and bug reports.

LANGUAGES KNOWN

- Tamil & English

PROJECT 2: PREPAID CARDS

Project Domain : Web Application (Bank)

Testing Methods : Functional, Smoke, Sanity, API and Regression Testing.

Technologies used : Playwright with TypeScript, GitHub, CI/CD.

DESCRIPTION

This project revolves around management and issuance of various types of prepaid cards like Gift, GPR, GPRNCMC, Forex cards, and Wallet.

Core functionality:

- The system manages BIN, BIN ranges, programs, and creates distinct products having its own eligibility criteria determining which beneficiary to possess which type of cards.
- The testing process spans across Admin portal owned by bank/bank- branches/corporates and as well the customer- facing portal
- Designed and implemented end-to-end test scripts using Playwright to automate these portals and integrated them in CI/CD pipeline through GitHub Actions for seamless product delivery.

ADDITIONAL SKILLS

- MS Word
- MS Excel
