- **Frameworks:**Ruby on Rails, Basic React.js, Basic Node js
- **Tools:**Sublime Text, Rubymine, Pycharm, Git, Code
- **Databases:**MySQL, PostgreSQL, SQLite
- **Operating Systems:**Linux, Windows
- **Deployment:**Git, GitLab, Capistrano, Heroku, BitBucket
- **Other Technologies:** Grahql, Rspec, REST Api, Sidekiq, Background job using delayed Job.
- **Other Skills:** Ability to work well in both team and individual environments, capable of developing new leading technologies, PowerPoint presentation skills, training interns, conducting interviews

Project Summary

- **Transport Management System:**https://logifreight.mahindralogistics.com/
  A comprehensive transport management system designed to optimize logistics operations, improve supply chain visibility, and ensure real-time tracking of shipments. Key features include:
  - Real-time GPS tracking for freight movement
  - Automated dispatch and route optimization
  - Integration with third-party logistics providers
  - Detailed analytics and reporting
- **HyperSpace: Inventory Management System**
  An inventory management platform that enables businesses to track stock levels, manage suppliers, and streamline warehouse operations. Features include:
  - Centralized inventory tracking across multiple warehouses
  - Automated restocking alerts to prevent shortages
- **Leber:**https://www.leber.jp/
  A comprehensive website designed for hospitals and schools to help students and patients monitor their stress levels and COVID-19 status. The platform includes interactive features and user-friendly interfaces to ensure that users can easily input their data and receive accurate results. Developed with a focus on accessibility and ease of use, the website helps institutions maintain the well-being of their communities.
- **Teams Bot Development:**
  A sophisticated application developed using Node.js and Ruby on Rails, leveraging the Microsoft Teams toolkit extension. This bot provides various functionalities within Microsoft Teams, such as automating tasks, responding to user queries, and integrating with other services and applications. The bot enhances productivity and collaboration within Teams by streamlining workflows and providing real-time support to users.
- **SmartFlow:**https://smartflow.vebuin.com/jp/
  A versatile to-do task management website tailored for employees who travel for project meetings. The platform allows users to create and manage tasks, set deadlines, and track progress. It is designed to improve productivity and ensure that employees stay organized while on the go. SmartFlow is used by various companies to manage their employees' project-related tasks efficiently.
- **RIGHT-ON:**https://right-on.co.jp/
  An e-commerce platform for online shopping in Japan, particularly focusing on clothing and accessories. The website offers a wide range of products, detailed descriptions, and a seamless shopping experience. RIGHT-ON's user-friendly interface and efficient search functionality ensure that customers can easily find and purchase the items they need.
- **INVOEASE:**https://invoease.com/
  A US-based website designed for purchasing printing products. The platform allows users to browse products, place orders, and make payments using debit, credit, and bank-to-bank transfers. INVOEASE focuses on providing a hassle-free shopping experience for customers in the printing industry. The website is designed with a user-friendly interface and secure payment options.
- **VIRTUAL INSURANCE TOOLS:**https://virtualinsurancetools.com/
  A specialized tool developed for insurance companies to manage their policies and agents. The platform enables insurance companies to register and provide login credentials to agents, who can then manage insurance policies, track client information, and process claims. Virtual Insurance Tools aims to streamline insurance operations and improve efficiency.
- **KBZ Ticketing System:**
  A robust ticketing system designed to track customer service requests. The system supports multiple channels for creating tickets, ensuring that customer issues are efficiently logged and addressed. The KBZ Ticketing System includes features like ticket assignment, status tracking, and automated notifications, enhancing the overall customer support experience.
