Kaustubh K Shetty

Former Co-Founder of HenshinGo

Senior Engineering Manager of Mobile Apps + Android Application Developer

10 Years 06 Months kaustubhkshetty@gmail.com **+91 96110 84074**

Experienced in **building** high-quality well-scaled **Android apps** and **managing** large **teams** while working with esteemed companies and products that reached **millions of users**. Also, having **built my own startup**, I understand **Software Engineering** beyond just coding and can contribute **beyond** my **core areas**. Currently, I am **looking to** join an organization where I can take up **technical roles with increased responsibilities**, where my potential and experience can play a vital role in the **company's success** and in turn, I get to learn further. I have built multiple apps from scratch & took over legacy code bases for maintenance/revamping. Apart from high-performance Native Android Apps, I have also worked on Hybrid Apps using Flutter & Kotlin Multi-Platform (KMM). Also, I can be handy in helping across teams on Angular & Java Spring Boot when needed.

SKILL SET

- ★ Mobile **Application Development** using Android **Studio** IDE for Android **SDKs** From JellyBean to Vanilla to Android 16. Also worked on Eclipse, Fleet, InteliJ & VS Code.
- ★ Expert in **MVVM** Architecture with **Kotlin** (**XML** View Based) apps. Built & deployed apps using **Jetpack Compose, Coroutines, Flows** and **Channels**. Also used MVI, MVC and MVP.
- ★ JetPack Components like **Live Data, View Model, Navigation Graph, Paging, Work Manager, Data Binding** and **ViewPager2**. Also worked on Material design UI/UX.
- ★ Integration of 3rd Party Libraries like **Retrofit** & **KTor** for Network, **Glide** & **Coil** for Image Loading, **Dagger Hilt** & **Koin** for Dependency Injection, CleverTap & MixPanel for analytics.
- ★ **Firebase** for Authentications, RTDB, App Distribution, Storage, FCM, Crashlytics, DeepLinks
- ★ **REST API** Integration, MQTT Web Socket, Payment Gateway, Google Cloud Platform, SAML
- ★ Tools and Portals like PostMan, Swagger, NetCore, OneSignal, DynaTrace
- ★ Instrumentations and **Unit Testing** using JUnit4, **Espresso**, Mockito, RoboElectric and Spoon
- ★ Build Variants using **Flavors**, Obfuscation with **Proguard**/R8, Layout Optimizer, App Profiling
- ★ Database: **RoomDB**, SQLite. Version control system: BitBucket, **Git**Hub. Tracking: **Jira**, Rally
- ★ Near Field Communication (**NFC**) Tap, Bluetooth Low Energy (**BLE**), i**Beacons**, OBD, OCR, QR
- ★ **Leadership** & **Mentoring**, Requirement Gathering, Task Planning, Estimations, Code Review
- ★ **Clean Architecture**, **SOLID principles**, **Play Store Uploads**, Release Monitoring, Crash fixes
- ★ Secondary Skills: Android Java, Flutter, Angular, Java, Figma Designing, **Agile** Scrum Lead.
- ★ **Motion Layout,** Object Animators, Async, RxJava, EventBus, Threads, JSON, CI/CD, Bitmaps
- ★ **Kotlin Multi Platform Mobile** (KMM/KMP) Developer
- ★ **Vibe Coding** using **AI Agents** like **Gemini**, Github Co-Pilot, ChatGPT.
- ★ **Project Management, Scrum Master,** Team Building, Hiring & **Team Management**.

Current Work - As Senior Engineering Manager

As an Engineering Manager for all the 3 Customer Facing Apps mentioned below, I am responsible for:

- **Discussing & Understanding Product Requirement** with the Product Owners & Business Teams.
- **Provide** quick **feasibilty** of the requirement **and estimates** to plan the business communications.
- **Build the team** : Hire, Monitor and Mentor - Team of Developers & Testers via Vendor partners.
- **Prepare Technical Solution**: Convert the Business Requirement to Technical Requirements and prepare Documentations for the internal and cross-teams to understand and work on.
- **Interact** with 3rd party API providers, SDK providers, Potential Partners, Customers, Dealers etc.
- **Release Apps** to Stores, track release health and decide on Rollout percentages, hot-fixes etc.
- **Adhere to SDLC processes** including JIRA Tracking, Agile Scrums, DevSecOps, InfoSec policies.
- **Perform operational tasks** to ensure compliace with DPIA, VAPT, CAB and Audit processess.
- **Working as Senior** Kotlin Multi-Platform **Developer** whenever the team needs additional help.

Hero App :: Over 15+ Million Users

https://apps.apple.com/in/app/hero-app/id1079298028

Hero MotoCorp has been the World's #1 Two-Wheeler Manufacturer for 25 years in a row. With such a vast customer base, it was important to provide a companion application built for all the customers who purchase any Hero Branded vehicles. This application intends to provide users with easy ways to Book Service or View past history, Fetch Vehicle Details, Exchange Price, Road Side Assistance, Loyalty Programs etc. From a business pov, it makes use of the large reach to upsell the products, parts and accessories to the customers.

Harley-Davidson Connect :: For a Premium Experience

https://apps.apple.com/in/app/harley-davidson-connect/id6450543264

Under the H-D X banner (a collaboration btwn Harley-Davidson & Hero MotoCorp), a new segment was opened up in the Indian market, where users could purchase affordable Harley-Davidson branded bikes for around 3L INR. Along with the bike, a companion application was built to provide a premium experience by giving features like Find My Vehicle, Bluetooth Connectivity, Turn-by-turn Navigation, Fuel indicators etc using BLE and TCU Cloud Connectivity using OTC. To enhance the experience further, we also introduced the Digital Journey for Harely Owners Group (HOG) for the premium Rides and Community Experience.

My Vida :: With Connected Technology

https://play.google.com/store/apps/details?id=com.hero.vida

The electric scooters in the VIDA lineup are the future of mobility with its all electric vehicles ranging from everyday scooters, to kids bikes to upcoming four wheelers. This application is a companion application that works by connecting the vehicle display with the application to provide connected features, including Geo Fence, Immobilization, Trip Analysis, Battery Analysis, Vehicle Diagnosis, Share Live Location, Phone Stats, Emergency Alerts etc.

Other Top Apps on Play Store - As Senior Android Developer

SportyBet :: Native Mobile Games for Sports Betting in Africa

https://play.google.com/store/apps/details?id=com.sportybet.android.gp.gh

SportyBet.com is currently ranked #1 in "Most Visited Sports Betting Websites of the World". Apart from responsible gambling, this app provides live score updates, interactive games & amazing gifts to all users. The games were first designed and developed as WAP and based on user traction, they are then chosen to be built on Native Mobile Platforms, to look and feel the best and utilize the native capabilities.

As an **Android Native Game Developer**, here I have:

- Independently developed a fully native Android Game and provided within this app as SDK
- Upskilled team by bringing latest concepts like Flows, Channels, Streams, Dispatchers etc.
- Co-ordination with the Designers, Testers and Creative Teams to ensure quality output.
- Native Animations including complex ones like collision detection and custom movements without using libraries to keep it light. Also worked on Sound Management & Socket APIs.
- SDK releases on Jenkins and Testing on various devices on BrowserStack to ensure games do not lag or break on Older Android OS.

Dunkin' Donuts :: Order On The Go (**20+ Million Downloads**)

https://play.google.com/store/apps/details?id=com.dunkinbrands.otgo

Order ahead & skip the wait! Ordering through the Dunkin' app is fast, easy and contactless! App users can place their order ahead through the app & skip the wait in the store.

As a **Senior Software Engineer 4**, here majorly I have:

- Built Android features under the Loyalty Program
- Made necessary changes in the entire code base for supporting white labelling after Inspire Brand took over the company.
- Code Coverage and Native Automation using Espresso.
- Was responsible for code quality and Sonar Qube implementations too.

Attain By Aetna :: Reward Program (For **CVS Health**, USA)

https://play.google.com/store/apps/details?id=com.aetna.attain (Discontinued)

Earn rewards for taking healthy actions and hitting your activity goals. This app is exclusive to Aetna Health Insurance users. It derives the calories burnt from the users' linked Fitbit & gives rewards for fitness. As a **Senior Software Engineer 4**, here majorly I have:

- Worked remotely in US Time zones to coordinate with teams.
- Native Automation for Code Coverage using Espresso and JUnit Tests

Oliveboard :: Mock Tests, Study Material & Live Videos (**8M+ Downloads**)

https://play.google.com/store/apps/details?id=in.oliveboard.prep

Oliveboard is an online exam test preparation platform for students, mainly offering services for banking and government exams for aspirants from Tier 2 and Tier 3 cities in India. The main app is an exam preparation app for Bank exams and Government exams like IBPS PO, IBPS Clerk, RBI Grade B, SSC CGL, SBI PO, ESIC SSO, Railway RRB Group D, Railways ALP, and more.
As an **Android Application Developer**, Engineered Development primarily:

- Focusing on User Experience to increase the Play Store rating from 4.1 to 4.5 stars with millions of users.
- Built features like a Daily news module, a discussion forum with leaderboards and PDF downloads of test materials.
- Revamped home screens and other screens

ClikSource :: For Candidates and Employers (now Hyqoo)

This application is used by candidates searching for a job based on Location and Skill. Apart from job listings, job applications, and notifications, Candidates also have the option to take Assessments and create video profiles to increase their chances.

ClikSource for Candidates - Revamp (From Scratch)
https://play.google.com/store/apps/details?id=com.hyqoo.talent
ClikSource for Candidates (From Old Code)
https://play.google.com/store/apps/details?id=com.cliksource.talentmobilityconsultant
ClikSource for Employers
https://play.google.com/store/apps/details?id=com.hyqoo.client
We did a Complete Revamp on the UI part & wrote the app from scratch using the then-latest technologies in Android Application Development, like Kotlin with MVVM, Navigation Graph and many of the Jetpack Components.
As an **Android Application Developer,** I was tasked to:

- Learning new concepts and creating generic implementations for the team to reuse
- Candidate Profiles and Jobs. OCR integrations.
- Ensured deliveries adhering to deadlines
- Constantly involved in UI design inputs and suggestions

Current Affairs and GK :: Exam Preparation App

https://play.google.com/store/apps/details?id=in.oliveboard.gkprep

The Daily Current Affairs app was released to provide free content for all users. All free content was placed strategically in this app, where the major focus was on current affairs & general knowledge. As an **Android Application Developer**, I built the features required for the app and created SDKs for integration with partner apps.

Skholar :: UPSC Exam Preparation

https://play.google.com/store/apps/details?id=in.oliveboard.skholar

Taglined as the most comprehensive online preparation portal for Civil Service Exams, skholar.com became an instant hit amongst all UPSC aspirants. This success on the website had to be cached in well, by launching a supporting Android application for the same.

As an **Android Application Developer**, I **learnt the Kotlin Language in 2018**, when it was relatively new and convinced the management to use it for this new product. I took the responsibility of learning Kotlin, writing the code and aligning my teammates to build our first completely Kotlin Based App in 2018 **and** even **released** it to the Play Store.

Few Important Apps that are no longer on Play Store

Below are some disclosable application variants where I have taken complete leadership and worked as a **Delivery Manager cum Lead Developer**, primarily focusing on:

- Client Interactions, Requirement Gathering and Effort estimations
- Sprint Planning, Scrum Master
- Android Lead Developer
- Backend & Web developer on a need basis
- White Labelling and Play Store releases
- Reporting. Constant Maintenance.

Kohot :: Hiring and Upskilling Platform for Beauticians

https://play.google.com/store/apps/details?id=com.kohot.jobs

Kohot.com is part of the Professional Beauty Group, one of the world's leading media and trade show organisers for the aesthetics, beauty, hair, spa and wellness communities: www.kohot.com.

Zeel :: Video Reviews based E-Commerce

https://play.google.com/store/apps/details?id=com.zeel.beauty

Zeel Beauty is a creator-led, review-first shopping network for conscious beauty products and is powered by shoppers, creators and brands. This was built completely using Jetpack Compose.

Fan Side :: Live Streaming App with In-App Coins

https://play.google.com/store/apps/details?id=com.company.videochat

Creator-friendly live video streaming platform where performers can earn directly from fans using in-app purchases. One of the build flavors was the Company Dating App linked above.

Lets Ving :: An IoT Product

https://play.google.com/store/apps/details?id=com.letsving.meeting

As an hardware & software agnostic platform, Ving OS simplifies collaboration for users using any Personal device, VC camera, TV Display & Meeting platform, providing an efficient way to collaborate.

Tsunagu Kun :: Election E-Campaigning app

https://play.google.com/store/apps/details?id=com.imss.ecampaign

A platform to enable the office users to view data & manage the supporter information. This was used during the Japanese election, to communicate between supporters & the person in charge.

FEW OTHER PROJECTS WORTH DISCUSSION (Interesting apps that weren't released)

Big Vision:: **Flutter** Hybrid App

This app helps in tracking users' proximity data using mobile channels and helps in effective user engagement. Using this application to identify customers poised to make a purchase and tying coupons & promotional efforts, into personalised offers that can help to engage and retain customers. As a **Front-end Lead**, I developed the:

- Flutter-based hybrid app development for Android and iOS
- Did the Bluetooth Ranging on iBeacons
- Assisted with Web development on a need basis using VueJs.
- Team Lead to coordinate between multiple organisations.

XipAPP:: Xla Engine

http://www.nearex.com/products/xip-apps

Xip-Lite Application (.xla extension) is a proprietary format of Nearex Technologies, created for developing applications on an XipPOS Terminal which runs on a custom operating system developed in-house. Clients around the globe are trained to write high-standard XLAs as required by the client organization's business logic. With a plan to use Smartphones with Android OS as a POS device. XipPos App was built as an engine that supports all existing XLAs on any Android device with a native look and feel. The code base of this project is built as a pure engine for rendering XLAs and hence it is highly customizable in terms of logos, images, colours & other assets and new flavoured apps can be built just by using XLAs and Jenkins. Engineered Application Development primarily focusing on:

- NFC implementation
- EMV Chip Card integration
- Printers, Network communications
- API Integrations
- XLA parsing and handling

XipHost:: Host-based Card Emulation for Tap & Pay (HCE)

Already had an established payment ecosystem with form factors such as Nfc Cards, Stickers and Wristbands. To add to the list of form factors, Android HCE was implemented, which could be activated as a card and could make payments through XipPOS terminals. This was included as an SDK module in one of our client's Mobile Applications (African Mobile Money Giant). Engineered primarily focusing on:

- Complete Wireframe Development, UI Design & Development
- API Integration and SDK Integration with Client Migration

Trip Expense:: Employee Tracker

Our client has most of their employees working on-site for sales and support tasks with a lot of local travelling involved. On submitting the bills, the fuel amount & other bills could be reimbursed. This app is built to keep track of all expenses incurred during the on-field trips by scanning & submitting bills in real time. Reporting heads can take action on those trips accordingly. Also, this has the employee's location tracking feature to ensure that the trip was on track and provide additional information to the manager while approving or rejecting a billing claim.

iPSP:: UPI Payment by NPCI

UPI (Unified Payments Interface) is a payment system that allows you to transfer money between any two parties directly via bank accounts. This application, entitled iPSP, was built to initiate a bank account transfer from anywhere with a few clicks, by using just a virtual address of the beneficiary. Features included linking bank accounts, setting up UPI Pin, Pay Money, Collect Money, Split Bills, Recurring Payments, Transaction History etc. The application used ANT Build on Android Studio to provide a high level of customization using property files, which could be easily modified as per customers to make the application look different for different clients, with minimal changes.

- Complete Wireframe Development, Designed UI incorporating Material Design guidelines
- Business Logic and API Integrations, ANT build configurations using Property files

Freemium:: Expense Manager and Freebies by VISA

This application keeps track of all credit or debit card purchases and ATM withdrawals, based on successful transaction SMS received by the user. It organizes them as expenditures in a sorted UI with all available information. Also, based on the volume of transactions on a particular card, based on tie-ups with banks, the application could provide freebies in the form of coupons which could be availed with certain minimum loyalty points. Users could avail any of the available coupons based on their needs. To issue these freebies or coupons we used VISA API. It was also integrated with one of the nationalized bank's APIs for retail banking where the transactions were fetched online without having to match patterns for SMS. This enabled the bank to provide loyalty points to their customers in an interactive way.

iWallet:: Template app with Cyclos Payment

iWallet is a mobile wallet offering financial services on the Android platform. This application was built with Cyclos Server as a Backend. At the application level, a set of predefined UI templates are built with on-screen logic. Screen transitions and UI flow could be a mix and match of these pre-defined templates. Also, the APIs and button actions were all template-based and could be easily modified using Java property files. This application was built with Eclipse as IDE. Major features were "Cash In" and "Cash Out" for Agents and "Send Money" for regular end users. It also included Top Up and Bill Payments.

MY ACADEMIC PROJECT (With National Awards)

MUHA:: Multi-Utility Hardware Application

This project aims to develop a software solution for hardware problems. This Android application allows the user to use their Android device as various hardware components of the computer system such as a computer mouse, joystick, keyboard, touchpad, presenter and notepad.

- Being the team leader, I played a key role in building my innovative idea
- Developed Touchpad, Joystick, Presenter and Notepad modules.
- Designed the overall user interface and integrated modules.
- Assisted in the documentation of the project.
- Presented in several project competitions at National & State Levels.

EDUCATION

Srinivas Institute of Technology, Valachil, Mangalore (Aff. VTU)
Bachelor of Engineering, Computer Science B.E. (CSE)

Dr. N. Shankara Adyanthaya Mem. English Medium School, Nitte
Primary and Secondary Education SSLC - 86%

WORK EXPERIENCE

Hero MotoCorp Ltd. / Senior Engineering Manager for Mobile Apps
MAY 2024 - PRESENT, Bengaluru

HenshinGo Technologies / Co-founder and Technical Lead
MAY 2022 - MAY 2024, Bengaluru

Photon Infotech / Senior Software Engineer 4
October 2020 - May 2022, Remote

ClikSource Solution / Executive Application Engineer
June 2019 - October 2020, Bengaluru

Oliveboard Comptech Pvt. Ltd / Android Developer
June 2018 - June 2019, Bengaluru

Integra Micro Software Services Pvt. Ltd / Software Engineer
July 2015 - June 2018, Bengaluru

ACCOMPLISHMENTS

- **Founded an IT service startup in 2022** & led the technical team for project deliveries. Trained many youngsters while delivering high-quality apps to ensure client satisfaction.
- Received **multiple Individual & Team Awards** at Hero MotoCorp from first month of joining till date.
- From winning the award of "**Promising Talent**" in my **1st** year to winning the "**Outstanding Contribution - Development**" in my final year of employment, consistency, brisk learning & excellent performances have been the summary of my professional career.
- My innovative academic project "**MUHA**" secured **2nd Place** at the **National Level** for "**Best Projects of the year**" competition organized by FAER in association with Motorola.
- MUHA **also** featured in **finales** (Top 20) of few other competitions such as Jed-I (National Level), KSCST (State Level), after having won the **best** project of the year in college level.
- I was elected as the **President of the college** cultural club for the AY 2014-15 because of my **strong interpersonal skills** and headed our college teams in several successful fests.
- Awarded **Best Outgoing Student** for the SSLC batch of 2009.
- Directed and performed in multiple Skits, Mime Shows and dramas and won awards at various stages including **Prathibha Karanji** at School level & National level inter-collegiate competitions during graduation.
