EXPERIENCE (8+ years incl. internship)

Ionixx Technology, Chennai — *Senior Programmer*

January 2021 - PRESENT

Current Position

Ionixx Technology, Chennai — *Programmer*

October 2018 - December 2020

Ionixx Technology, Chennai — *Trainee Programmer*

July 2017 - September 2018

Ionixx Technology, Chennai — Project Trainee(*Internship 8 Months)*

October 2016 - June 2017

EDUCATION

Nandha Engineering College(Autonomous), Erode — *B.Tech(IT)*

2013 - 2017

Percentage: 7.4% - CGPA

PSG Higher Secondary School, Sankari— *12th Board*

2011- 2013

Percentage: 69%

PSG Higher Secondary School, Sankari— *SSC*

2011- 2013

Percentage: 79%

LANGUAGES

Tamil, English, Telugu

SKILLS

Problem Solving.

Able to grasp new tech/concepts in a rapid manner.

Adapt and respond to changing work situations and environments.

Convergent thinker and solver.

IT Proficiency

Techstack: Java Spring Boot, Microservices,REST, Spring batch, gRPC, R2DBC, IBATIS, JOOQ, JUNIT, Reactive Programming, GraphQL, and Laravel PHP, HLD and LLD designs

Servers:Postgresql, MySQL, AWS S3,AWS EC2, Docker, Airflow, Openshift, GCS, Elasticsearch, Redis, Kafka.

Tools: Intellij, Webstorm, PHP storm, Git, Microsoft Office.

AWARDS

Rewarded for being one of the best senior developers in the Ionixx - 2021

Rewarded for being one of the best developer in the Ionixx - 2020

Microsoft Student Partner India - 2016

PROJECTS

Drivewealth PostTrade System — Senior Programmer (Mar 2020 -Present)

Techstack: Java Spring Boot, Microservices, Reactive Programming,REST, gRPC, R2DBC, JOOQ, JUNIT, GraphQL, Kafka, Postgresql, S3

Tools: Intellij, DBeaver, GitHub, JIRA

Role: Backend Senior Developer

PostTrade(CBU) serves as an application dedicated to the management of trade transactions and corporate actions at the organizational level. It facilitates the transfer of transactions from the existing system through Apache Airflow jobs, enabling the computation of balances, ledgers, and tax lots using FIFO and Average lot techniques. Mandatory corporate actions are applied to tax lots, and we calculate account-level profits and losses. Our processes have become more precise, yielding partner-specific reports. The automation of daily and historical migrations is accomplished through Apache Airflow, while record processing is handled by Spring Batch jobs, significantly enhancing performance and accuracy compared to the existing system. Additionally, we have implemented recon jobs to ensure synchronization between current systems.

- Led development teams in the successful integration of product strategy use cases,
- Played a crucial role as an individual contributor in core modules such as processing transactions and corporate actions. The migration of old customers with large datasets to the current system was executed successfully.
- I conducted thorough analysis and optimization of the code, resulting in improved performance compared to the previous system.
- Furthermore, I developed a more accurate and efficient tax lot calculation process.
- Involved in most of the HLD and LLD designs which improved the overall application performance by 80%.

LSLB Advanced monitoring System — Senior Programmer (Dec 2019-Feb 2020)

Techstack: Java Spring Boot, Microservices, REST, JUNIT, MySQL, S3, SendGrid, Angular, MySQL, RedisServer, GCS

Tools: Intellij, Git, DBeaver

Role: Senior Developer

The LSLB application is designed for tracking online lottery tickets. We have established API services to gather ticket purchase information from various vendors, enabling the calculation of overall revenue for both the operator and the entire system. The application also allows for the export of periodic reports for comprehensive analysis.

- Played a pivotal role in the backend API development for both the admin and operator modules.
- Specifically, I contributed to the development of the tax calculation feature for operators. This functionality generates revenue dynamically, taking into account the specific operators and games involved, ensuring precision in the financial calculations.
- Played major role in the DB design which improved the dashboard and analytical query performances

Kashkind — Senior Programmer (Jan 2019-Nov 2019)

Techstack: Java Spring Boot, Microservices, REST, JUNIT, MySQL, S3, Angular, MySQL, RedisServer

Tools: Intellij, Git, DBeaver

Role: Senior Developer

Kaskind is an application designed to extend loans to corporate customers. We have developed API services and an Angular-based front end, allowing for the creation of customizable forms and streamlined processing of applications from corporate clients. An admin portal is also implemented, providing the flexibility to customize application forms and effectively address customer concerns and inquiries. The backend services are powered by JAVA Spring Boot, Angular, MySQL, and Elastic Search.

- Played a significant role in the development of the loan leads creation process and the implementation of customizable forms.
- Additionally, I focused on performance tuning for the loan processing forms, resulting in a remarkable 50% improvement in the overall application performance.

MarketPlace — Programmer (Aug 2018-Dec 2018)

Techstack: Java Spring Boot, REST, MySQL, S3, Angular, MySQL, RedisServer, ElasticSearch

Tools: Intellij, Git, DBeaver

Role: Developer

The MarketPlace is the application which can be used to sell and buy vehicles online. Both used and new vehicles.This application is developed using Laravel PHP, MySQL as backend and Angular 6 as frontend and uses Elasticsearch engine to get search results in an effective manner and also uses Redis through which users can have better experience when using the application where the page loads within a second.

Chola HomeLoan — Programmer (Dec 2017-July 2018)

Techstack: Laravel PHP, REST, MySQL, Angular, MySQL, ElasticSearch

Tools: Phpstorm, Webstorm, Git, DBeaver

Role: Senior developer

Chola Loans is a specialized application designed to facilitate the approval and management of home and vehicle loans for the public. We have developed robust API services and an Angular frontend to streamline the creation and processing of loan applications. Once approved, customers can conveniently monitor and manage their loan details within the same portal. Payment options are diversified, allowing users to make payments through various gateways. The application also includes features such as reminders for document submission and updates on processing status. To address customer concerns and inquiries, an admin portal has been implemented.

- Played a crucial role in the backend API development for customer-facing applications and admin portals, ensuring the seamless functioning of the loan application process.
- Additionally, I integrated payment gateways and meticulously handled payment transactions to ensure precision

Gaadibazaar — Programmer (May 2017 - Nov 2017)

Techstack: Laravel PHP, REST, MySQL, Angular, Elasticsearch, Redis, S3

Tools:Phpstorm, Git, DBeaver

Role: Backend Senior developer

Gaadibazaar is a versatile application designed for the online buying and selling of vehicles, encompassing both used and new options. Users have the added functionality of securing loans based on their selected vehicles. Developed with Laravel PHP and utilizing MySQL as the backend, the application employs the Elasticsearch engine for efficient search results. Additionally, Redis is utilized to enhance user experience, ensuring swift page loading within a second.

- I played a significant role in developing the REST API for importing and exporting new/used vehicles, contributing to the seamless integration with Elasticsearch.
- Implemented a search algorithm using elastic search for both new and used vehicles, further enhancing the application's overall functionality.

The Farmacy — Trainee Programmer(Jan 2017 - Apr 2017)

Techstack: Yokart CMS, PHP, MySQL

Tools: Phpstorm, Mantis, Git, Beyond Compare

Role: Backend developer

The farmacy application is used to sell Medicinal products online across the country. In which we can do both Business to Business and Business to Customer dealing.In this we have also developed API services for the mobile application. In this we successfully changed and used the Yokart core framework.

Dubuqu — Project Trainee(Intern)

Techstack: PHP, MySQL, REST

Tools: Phpstorm, Mantis, Git, Beyond Compare

Role: Backend Developer PHP

Dubuqu is a mobile application which can be used to share media to the users in a secure manner.

UNUM — Project Trainee(Intern)

Techstack: Angular JS

Tools: Webstorm, Mantis, GIT, Beyond Compare

Role: Angular JS Developer

The Unum is the application which can be used to schedule post media on Instagram. This is developed for organizational Instagram handling applications. In which we can edit the media before posting to Instagram. We can schedule when to post and track the post likes and analytics to get the best timing for the posts.

Chip — Project Trainee(Intern)

Techstack:PHP, MySQL, AngularJS

Tools: Mantis, Eclipse, Git, Beyond Compare

Role: Backend PHP and Frontend Angular JS developer

The Chip is the application which can be used to track patient information and to easily communicate within the

doctors. Doctors can share patient details (i.e.,) files or images which can be used for diagnosing the disease easily and also has video calling features for communication.

DECLARATION

I do hereby declare that the above information is true to the best of my knowledge.
