PROFESSIONALSUMMARY

- Overall, about 6 years of experience in Software industry. DevOps Engineer with about 4 years of experience in automating cloud infrastructure, CI/CD pipelines, and containerized applications and optimizing cloud environments.
- DevOps Engineer with about 4 years of experience in the software industry, including specializing in automating cloud infrastructure, CI/CD pipelines, and containerized deployments.
- Proficient in AWS (EC2, EKS, IAM, S3), Azure, Terraform, Jenkins, GitHub, SonarQube, Docker, Kubernetes, Helm, Prometheus, Grafana, and Slack.
- Hands-on experience with **Linux-based systems**, performing system administration, shell scripting, package management (apt, yum), troubleshooting, and remote server access via SSH.
- Strong expertise in **Ansible**, including creation and management of **playbooks**, roles, and collections to automate provisioning, application deployment, and environment consistency; utilized **Ansible Vault** for secure credential management.
- Designed and implemented **CI/CD pipelines** using Jenkins, GitHub, Maven, and SonarQube, with end-to-end automation of build, test, and deployment processes.
- Deployed and managed applications on Kubernetes clusters hosted on Amazon EKS; set up real-time **monitoring using Prometheus and Grafana** for infrastructure and workload metrics.
- Collaborated closely with development and operations teams in Agile environments to enhance deployment reliability, reduce manual efforts, and ensure seamless DevOps workflows.

TECHNICALSKILL

Cloud Platforms	:	**Amazon Web Services** (EC2, VPC, IAM,S3, RDS, EKS, Lambda, CloudWatch),**Azure**.
IaC Tool	:	Terraform
Version control	:	Git, GitHub
Operating System	:	Linux (Ubuntu, Amazon Linux), Windows
Code Quality & Security	:	SonarQube, OWASP ZAP
Configuration Management	:	**Ansible, Secret** Manager.
Containerization	:	Docker
Container Orchestration	:	Kubernetes, Helm, Amazon EKS
Programing &Scripting	:	Core Java, SQL, Shell Scripting, Selenium, C#, Python, Bash
Web Technology	:	HTML and CSS.
Monitoring & Visualization	:	AWS CloudWatch, Prometheus and Grafana and Slack
Collaboration & Communication	:	Slack

CARRER SPAN

- Working as **DevOps Engineer** from Aug 2022 to till date in Caliber Technologies.
- Worked as an **Associate SQA Engineer** from Jan 2020 to Aug 2022 in InteQ Software LLP.

PROFESSIONAL EXPERIENCE

Project Details

DevOps Engineer
Caliber Technologies
Date: Aug 2022 -Present
Project Name: **learn-iq**
Roles & Responsibilities:

- Architected and maintained **AWS infrastructure**, ensuring high availability, scalability, & security.
- Automated infrastructure provisioning and management using Terraform to ensure repeatability, version control, and consistency across development, staging, and production environments and reducing manual configuration errors. Infrastructure as Code (IaC)
- Established branching strategies to facilitate concurrent development streams.
- Built and maintained end-to-end automated CI/CD pipelines with Jenkins, GitHub, Maven and SonarQube for continuous integration, testing, and deployment of code.
- Containerized legacy applications using Docker and deployed them on Amazon EKS clusters using Helm for high availability, load balancing, and scalability across containerized environments.
- Configured Ansible for configuration management and automated repetitive operational tasks.
- Automated server configuration and deployment tasks with Ansible playbooks, ensuring seamless application updates and patch management across environments.
- Configured Canary and Blue-Green deployment strategies to minimize downtime during releases. • Implemented continuous monitoring using Prometheus and set up dashboards in Grafana for visualization of application and infrastructure metrics and alerting mechanisms for proactive issue resolution and reducing downtime.
- Used **Ansible** to automate server configuration and software deployment.
- Created custom **Ansible** collections and roles to simplify infrastructure automation
- Worked on **Linux servers** for deployment, monitoring, and troubleshooting.
- Managed user access, permissions, **and SSH key-based authentication to ensure secure access to Linux servers.**
- Performed root cause analysis for incidents **on Linux environments** to ensure high availability and reliability.
- Configured and managed Linux-based environments for hosting containerized applications. Collaborated with software development and operations teams in an Agile environment, participating in sprint planning, retrospectives, and daily stand-ups to streamline processes.

Associate SQAEngineer
InteQ Software LLP
Date:Jan 2020 – Aug 2022
Project Name:
Datawing (DataTug).
Roles & Responsibilities:

- Created and maintained automated test scripts using tools like Selenium, JUnit, and TestNG
- Implement and manage CI/CD pipelines using Jenkins.
- Merged the code of peers into master branch.
- Work closely with cross-functional teams including developers, product managers, and other stakeholders.
- Develop and maintain test automation frameworks to streamline testing processes.
- Resolving client issues.
- Used to fix bugs as well(Since having some development knowledge).
- Execute performance tests to evaluate system performance under various conditions, identifying bottlenecks and optimizing system performance.

EDUCATIONALQUALIFICATION

- Bachelor of Engineering from MVSR Engineering College Hyderabad with **75.6%** (2015 to 2018).
- Diploma from GMR Polytechnic (Bhadarachalam) with **88%** (2012-2015).
- SSC from AVM EM High School Nalgonda **9.3 CGPA** (2011-2012).

DECLERATION

I hereby declare that the above furnished information is true to the best of my Knowledge and belief.

Place: Hyderabad, India **Signature:** Vijaya Krishna B.
