SENIOR CLOUD/PLATFORM ENGINEER

5+ years of experience designing, automating, optimizing and migrating platforms on AWS. Specialized in Infrastructure-as-Code, multi-account governance, Serverless Compute platforms (EMR/ECS/EKS/Lambda), CI/CD automation, and FinOps-driven cost efficiency. Proven ability to build scalable cloud foundations, reduce cloud spend, and enable rapid, secure delivery for engineering teams.

SKILLS

AWS: VPC, IAM, Organizations, Control Tower, SES, SQS, S3, EC2, EMR, EKS, ECS, Dynamodb, Lambda, EMR, CloudWatch, KMS, ALB/NLB, Transit Gateway

DevOps & Automation: Code Pipeline, Terraform, Jenkins, ArgoCD, GitHub Actions, Helm, Docker, Ansible, HashiCorp Vault, Python, Shell

FinOps: Cost Explorer, Turbonomic, Cloudability, rightsizing, storage optimization, automated scheduling

Other: Git, SonarQube, Trivy, Nexus, CI/CD governance, security best practices

EXPERIENCE

Software Engineer III – Allvue Systems., January 2026 - Present,Pune

- Contributed to the architecture of a Document Ingestion and Analysis Layer(DIAL & DocIQ), reducing reliance on third-party vendor tools while improving governance, scalability, and operational control.
- Built reusable, modular Terraform frameworks to standardize infrastructure patterns for asynchronous event-driven serverless systems (SQS, SES, S3, Lambda, ECS & DynamoDb) and AI-powered search and query application across all environment.
- Designed and Operationalized secure, multi-environment CI/CD pipelines in Jenkins, enabling automated and consistent application and infrastructure releases.

Technology Delivery Senior Analyst – Accenture Solutions., August 2024 - Present,Pune

- Architected and maintained scalable EMR serverless clusters for EL Pipelines, and automated deployments using Jenkins.
- Implemented S3 lifecycle rules, cross-region replication, and archival policies, contributing to annual storage cost reduction.
- Designed EL job workflows and automated job deployments with python and shell scripting, improving reliability for data processing workloads.
- Led a 4-engineer team to migrate on-prem Data Pipelines to AWS, improving platform uptime and enforcing governance.

Cloud Engineer - Infosys Limited., January 2021 – August 2024,Pune

- Built reusable Terraform modules for VPC, EKS, EC2, IAM, and networking, reducing provisioning time by 60% across teams.
- Architected and deployed high-availability EKS clusters; implemented monitoring via CloudWatch and centralized logging using ELK.
- Applied FinOps practices including rightsizing, automated EC2 scheduling, and S3 optimization, resulting in 15–25% compute & storage savings.
- Developed CI/CD pipelines using Jenkins, Nexus, and code quality gates (SonarQube + Trivy), and ArgoCD ensuring secure and consistent releases.

PROJECTS

1. Building Asynchronous Serverless Document Ingestion Analysis Layer.

- Designed to handle asynchronous document ingestion and analysis layer to a downtier application using AWS serverless approach also paving for future integration with AI for Document processing.
- Implemented Security hardnening, lifecycle policies, and integrated monitoring to enhance durability and reduce security risk.
- Developed automated deployment infra and app pipelines in Jenkins1`, improving reliability and reducing manual intervention.
- Working with AI product team to provision their workloads in AWS using Terraform and Jenkins, ensuring secure, scalable and reliable.

2. Modernizing Mainframe-Based Data Processing to AWS EMR Framework

- Built a serverless architecture using S3, EMR Serverless, and IAM guardrails to replace legacy jobs.
- Implemented cross-region replication, lifecycle policies, and integrated monitoring to enhance durability and reduce storage cost.
- Developed automated deployment pipelines for EMR workflows, improving reliability and reducing manual intervention.
- Worked in a cross-functional team to migrate workloads from mainframe to AWS, ensuring cost efficiency, reliability, scalability and governace.

3. Migration and Provisioning of Infrastructure on AWS Cloud

- Migrating on-prem legacy apps to AWS, architecting landing zones, VPC networking, and IAM policies.
- Implemented infrastructure provisioning with Terraform modules, reducing provisioning time and ensuring governance via AWS Control Tower and AWS IAM.
- Automated EC2 start/stop schedules, S3 lifecycle transitions, and rightsizing recommendations using FinOps dashboards.
- Delivered end-to-end CI/CD pipelines for containerize workloads on EKS with governance controls, enhancing release quality and reducing deployment failures.

CERTIFICATIONS

- AWS Certified Cloud Practitioner Foundational.
- AWS Certified Solutions Architect Associate.

EDUCATION

Bachelors of Engineering - Savitribai Phule Pune University, Pune • 2020
