SKILLS

.NET Core MVC | C# | ASP.NET | Entity Framework | LINQ | MSSQL | Stored Procedures | Query Optimization | RESTful APIs | Swagger | Postman | Azure DevOps (CI/CD, Git) | Deployment | Server Configuration | Angular (Basics) | HTML | CSS | Grafana | Kibana | ElasticSearch | Device Orchestrator (DO) | Process Engine | SignalR | Adaptive Alerts (Teams) | XUnit | API Testing | Debugging | Strategy Pattern | Modular Architecture | Layered Architecture | Technical Documentation | User Manuals | Agile (Scrum)

WORK EXPERIENCE

Application Engineer | Helmapps Limited | March 2023 – October 2025

Core Project: SRCS (Storage Retrieval Control System)

An Automated Storage and Retrieval System (ASRS) deployed across Spain, Germany, Turkey, and the UK for high-demand industrial environments.

Technologies Used: .NET Core MVC, Angular, MSSQL

Project 1: Backend Development & Database Management

• Developed backend APIs and business logic using .NET Core MVC to automate warehouse functions, improving speed and reliability.

• Worked extensively with SQL Server via SSMS for monitoring, optimization, and troubleshooting.

• Designed and maintained stored procedures and optimized slow-running queries.

Project 2: Real-Time Data Integration & Device Orchestrator (DO)

• Installed and configured Device Orchestrator (DO) and Admin Tools on production servers.

• Mapped PLC tags to memory locations and configured resources for SRCS and PLC communication.

• Prepared and deployed automation workflows using Rudder Studio.

• Configured and deployed the Shopfloor UI, enabling real-time monitoring of cranes, conveyors, and nodes.

• Customized UI layouts using JSON and handled production hosting.

Project 3: Process Automation with .NET

• Developed File Loader Processor to integrate data from sequencing applications.

• Created Pallet Allocation Processor to match inventory demand with resource availability.

• Used the Strategy Pattern for modular and scalable processor design.

• Developed Error Processor with Teams Adaptive Alerts for monitoring system failures.

Project 4: Advanced Troubleshooting & Testing

• Performed extensive unit testing using XUnit and API testing using Postman.

• Simulated real-time events by triggering processors and updating database states.

• Ensured stability and reduced production issues through proactive validation.

Project 5: System Monitoring & Server Configuration

• Configured Process Engine as a Windows service with SignalR real-time communication.

• Installed Grafana and created dashboards with SQL queries for warehouse KPIs.

• Installed and configured ElasticSearch & Kibana to maintain logs and provide insights to developers.

Project 6: Documentation & User Support

• Authored user manuals, technical documentation, and onboarding guides for clients.

• Created internal knowledge base resources for analyst teams to reduce support load.

EDUCATION

Artificial Intelligence and Machine Learning | IIT Palakkad | 2022–2023

B.Tech in Mechanical Engineering | Government Engineering College Barton Hill | 2017–2021
