OBJECTIVE

Software Engineer with 7+ years of experience in Developing, Designing and Deploying AI solutions seeking full-time Software engineering roles. Proficient with deep learning technologies, such as computer vision, LLM, Agentic AI, GenAI etc.

Technical SKILLS

Artificial Intelligence	Agentic AI, LLMs, AI Agent, NLP, Agentic RAG, ML, DL, GenAI
Cloud Technologies	Azure ML, Azure OpenAI, Azure (Blob Storage, Search, Computer vision, Functions, Key Vault, Event Grid, Monitor, Cognitive Service, App services)
Tools & Libraries	Visual Studio, Visual Studio Code, Azure AI Foundry, Microsoft Copilot Studio, Google DialougflowCX, LUIS, Git, Postman, Power Automate, Language Studio, Document Intelligent
Database	Cosmos DB, SQL Server, Azure Blob, MySQL, Oracle
Programming Skills	C#, Python, JavaScript, Angular, Node, Typescript, HTML, CSS, SQL
Frameworks	.Net, Microsoft Bot, MVC, MCP, ASP.net, Swagger
Version Control	Azure DevOps, Git, Docker

EXPERIENCE

Senior AI Engineer Jul 2024 - Present
Sword Global *Chennai*

- Designed and developed an intelligent Agentic Bot to assist students with academic queries, leveraging Azure OpenAI, Azure Cognitive Search, and Semantic Kernel for enhanced contextual understanding and precise response generation.
- Developing and maintaining a Retrieval-Augmented Generation (RAG) model to ensure reliable, up-to-date information retrieval and generative response synthesis.
- Developed Summarization Tool to help tutors to understand user report and improvement area.
- Tech used: C#, .Net, Python, Gen AI, Open AI, RAG, Microsoft Copilot Studio, LLM, Azure, Semantic Kernal, Azure AI Foundry

Lead Software Engineer Dec 2021 – Jul 2024
Persistent System *Pune, Maharastra*

- Developing a chatbot which helps remove extra burden on HR team, it can help employees with HR, Legal, finance etc. department FAQs and holiday, vacation, project and people related queries.
- Developed a Tool to mark the attendance of zoom meeting participants
- Developed a Tool to on board new members in the project.
- Technology used: C#, .Net, Cognitive Service, Microsoft Copilot Studio, Power Automate, Dataverse

Software Engineer Sept 2018 – Dec 2021
Acuvate Software *Hyderabad, Telangana*

- Build, Developed and Deployed many bot for different channels and platforms that help user understand the product, details of the product and buy products from the platform.
- Developed a site for training ML Data to open portals Like Luis, QnA Maker and store Data in databases.
- Designed and Developed Chatbot with the help of Google DialogFlowCX

PROJECTS

Tutor BOT. Designed and developed Agentic Bot which Provide accurate answers to students' queries based on study material using Semantic Kernal, Azure Search and Azure OpenAI. Utilized **Semantic Kernel** to orchestrate prompt engineering and integrate external knowledge sources efficiently. Integrated **Azure Cognitive Search** to index and retrieve relevant study materials, enabling accurate and real-time answers based on context-specific content. Collecting and digiting study materials and maintained the end-to-end lifecycle of the RAG system, including data ingestion, vector embedding generation, document chunking, and retriever-tuner loops for performance optimization. Used Python for chunking and storing document data into Vector Database. Uesd Copilot studio for developing a POC on multiagent Bot. Common languages for chatbot development include C#, Python, JavaScript, node.js, React. And Platform used are OpenAI, Azure AI Foundry and Azure, Microsoft Copilot Studio.

Steve. This tool is designed to enhance the process of reviewing and understanding course session transcripts, making them more accessible and easier for tutors to work with. By analyzing complex or lengthy transcripts, the tool extracts and highlights the most important information, presenting it in a clear and concise format. Built using **Angular**, **JavaScript**, and **OpenAI**, the application ensures an interactive and dynamic user experience.

Enterprise Chatbot. Developed an AI-powered chatbot to reduce the operational burden on the HR team by automating responses to common employee queries related to HR, Legal, Finance, Projects, People, Holidays, and Vacations. The chatbot integrates with multiple enterprise systems to deliver accurate, real-time information while maintaining conversational context and personalization. developed a custom app for Holiday and vacation balance using bot skill and bot framework. Created MS flows for Luis and Dataverse tables to mark logs of user. Used DialogFlow to create intents to welcome the user, verify employee credentials (via Azure AD), retrieve employee ID and role from Dataverse. It was build and deployed with Microsoft copilot. using C Sharp Bot Framework, Microsoft Copilot Studio, Microsoft Azure, LUIS, QnA Maker, Power Virtual Agent, Microsoft Flows, Synapse, Azure Web services, Dataverse, SQL Server

MyLearning Transcript. Developed an automated tool that reads and processes all meeting participants, calculates their individual attendance durations, and records their attendance in a learning portal based on predefined meeting categories. The system accurately tracks participation time to ensure fair and reliable attendance registration. Built using **C# with .NET Core**, the solution leverages **Azure WebJobs** for background processing and automation, enabling efficient handling of meeting data. **SQL Server** is used for secure data storage

Common on-boarding Tool. Developed a centralized portal to register and manage new project members, assign their associates, and track daily delivery activities. The system streamlines project coordination by providing structured workflows for member onboarding, task assignment, and delivery monitoring. Built using Angular for a responsive and user-friendly front end, and C# with .NET Core for a robust and scalable backend. Integrated Swagger for API documentation and testing, Utilized SQL Server for secure and efficient data storage, enabling reliable tracking, reporting, and data management across the project lifecycle

Q-Core. Implementation and delivery of the end-to-end conversation flow in bots by considering the complex use cases and business functional specifications including cross integration's Deployed bot for Teams Channel, Salesforce, modern SharePoint, classic SharePoint and adobe classic sites. Creating ASP.Net MVC Application Bot with V4 Bot Framework. Custom Pipelines for automated notifications. Prepared Technical Design and Functional documents. Developed SharePoint classic site for training and adding intent. using C Sharp Bot Framework, Microsoft Azure, Typescript, Microsoft SharePoint, Microsoft Flow, Azure Data factory, LUIS, QnA Maker, Adobe Classic, JavaScript, SPFx, SQL Server

Clear. As a Developer for Consumer Facing Web chat Project for a leading BPC brand. Configuring and Hosting bots on Web chat and Facebook. Integrating external action API such as Gigya, Augmented Reality, ML trained Product Recommendation systems, feedback collecting system. Created a custom display on Facebook, to show scalp details and recommended products. Using C Sharp Bot Framework, Microsoft Azure, LUIS, QnA Maker, Microsoft SharePoint, JavaScript, SQL Server

C-Core. Designed and developed intelligent conversational bots for Microsoft Teams and Facebook Messenger using Microsoft Bot Framework v4 and Google Dialogflow CX, enabling complex conversational flows, intent recognition, and contextual understanding. Built and maintained an ASP.NET MVC bot application using C#, hosted on Microsoft Azure for secure and scalable cloud deployment.

EDUCATION

Bachelor of Technology, Uttarakhand technical University 2013 - 2017

EXTRA-CURRICULAR ACTIVITIES

- Actively involved in running club, participating in half marathon.
- Regularly engage in cycling activities, including long distance rides and fostering a dedication to physical fitness
- Player of the tournament in organization level on Cricket and badminton.

LEADERSHIP

- **Team mentor:** Provided dynamic leadership as the mentor for a team of six member, fostering individual development through tailored guidance, constructive Feedback, Leading Client discussion, Conducting Internal training's and collaboration problem solving.
