MAHESH KUMAR REDDY

Mobile: +91 8247303479

Email: maheshpython2190@gmail.com

Professional Summary:

- With **6 Years** experience delivering scalable, modular applications using **Python, Django (MVT), Flask, and Fast API**.
- I have **4 Years** experience in building production chat-bots and **Generative AI solutions**, including **agentic (Agentic AI)** workflows and **multi-agent systems (Agentic AI).**
- I have extensive experience in **Lang Graph, RAG cloud deployments, vector search/RAG, and LLM integrations and REST API.**
- I have experience **in OpenAI, Google Gemini Apis, RAG, Lang Chain/Lang Graph, Transformers** and **MCP**.
- **Docker containerization,** and basic Kubernetes (pods, deployments, services,). Strong **Jenkins** expertise for **CI/CD** (setup**,** configuration, pipelines-as-code), integrated with image build/scan and deployments.
- Experienced in Microsoft Azure Cloud Services, including Azure Functions for serverless computing, Azure AI Foundry for developing and managing AI solutions, and Azure Storage services for scalable, secure data management.
- extensive experience in utilizing Python libraries such as **NumPy** for high-performance scientific computing, **Pandas** for effective data manipulation and analysis, and **Matplotlib** for creating static, animated, and interactive visualizations in Python.
- Expertise in designing and configuring databases, including **SQL** and **NoSQL**, as well as developing and implementing robust backend applications and programs.
- Proficient in deploying projects using version control systems such as **Git** and **Bitbucket**, ensuring efficient collaboration, versioning, and seamless deployment of code.
- Experienced in leveraging **Python for network automation**, proficient in developing scripts and tools to automate network configurations, provisioning, and monitoring processes.
- Proficient in working with both **Windows and Linux** operating environments.
- Has good knowledge on **scripting languages**.
- Good working knowledge on **Ansible**.
- Working knowledge of **AWS cloud services**.

Work Experience:

- Working in with **Bosch** in Bangalore from Jan 2025 to still date.
- Worked as **Technical Lead** with **HCL** in Bangalore from Sep-2021 to Jan 2025.
- Worked as **Senior Software Engineer** with Tech Mahindra in Bangalore from Feb-2021 to Sep-2021.
- Worked as **Associate Consultant** with ITC infotech in Bangalore from Feb-2020 to Feb-2021

Educational Qualification:

- M. Tech from Madanapalli Institute of Technology and Science (MITS) in 2018.

Technical Skills:

- **Primary Programming Languages:** Python, Fast Api, Django, Flask, HTML, CSS
- **AI Technologies**: Agentic AI, Gen AI, Vectors db., Lang graph, RAG, Finetuning of LLMs, MCP, Open AI Models, Embedding Models, Transformers and Hugging Face.
- **Secondary Programming Languages:** Java Script, SQL, RESTAPI, Docker, CICD

- **Other Tools:** GitHub, VS code, PyCharm, Anaconda, postman, EC instance, AWS Lambda, SQS, SNS, AWS glue, Azure functions, Azure blob storage, Agile, Pytest, unit test, Cognigy, Automation Any where

Professional Experience:

Project4: ROB (HR Digital Assistance)

Client: Bosch

Duration: Jan 2025 to still date

Location: Bangalore

Team size: 3

Environment: Python 3.10, Fast Api, RAG, Embedding model, Lang chain, Agentic AI, LLM, Gpt-4.1 model, Generative-AI, Bit bucket, Linux, Vector Db, Docker, Jenkins, Azure.

Project description:

- Designed and deployed ROB – a virtual HR assistant integrated with Microsoft Teams, intranet widget, web chat, email, and mobile platforms.
- Automated leave management, reimbursements, asset requests, and onboarding workflows with approval routing.
- Developed recruitment support features including job posting templates, interview scheduling, candidate status tracking, and feedback collection.
- Integrated employee data lookup capabilities for role, manager, location, tenure, and PTO balance from HRIS systems.
- Implemented compliance and training automation with enrolment, reminder notifications, and completion tracking.
- Integrated with ITSM platforms such as ServiceNow and Jira Service Management for HR-related service requests.
- Built enterprise semantic search for quick retrieval of approved HR documents and policies.
- Established human-in-the-loop escalation workflows to route sensitive or complex cases to HR Business Partners.

Responsibilities:

- Interacted with clients to discuss Requirements and involved in Technical, Functional analysis.
- Every day attending the client meeting and discussing the requirements.
- Implemented unit tests for the code in Test Driven Development using Agile, Scrum methodologies.
- Implemented business logic as per client requirements.
- Here we are following two-week sprint, after compensation of sprint conducting sprint review and sprint planning meetings. we are discussing any roadblocks and any dependency.

Project3:

Project: iCE Chat Bot (intelligent ChatOps Engine)

Client: Cisco

Duration: Sep 2022 to Jan 2025

Location: Bangalore

Team size: 1

Environment: Python 3.6, Rasa framework, Generative-AI, Django Rest Framework, Bit bucket, Linux, Mongo dB, Docker, Jenkins.

Project description:

- iCE (Intelligent Chatbot Engine) is AIOps engine, which enables true collaborative work between Project Management, Development, Testing and Ops/Infrastructure team - assisting each member fulfilling their individual responsibilities in silos.
- The available Chatbot targets to offer Software-as-a-Service and can be integrated through REST APIs to chat systems such as Webex/MS Teams, Slack etc.
- iCE is a AIOps engine that offers end-to-end virtual project management, DevOps, and assistance, improving project governance, dev collaboration, and asset re-utilization.
- Developing the Generative-AI feature for business requirements.

Responsibilities:

- Interacted with clients to discuss Requirements and involved in Technical, Functional analysis. Every day attending the client meeting and discussing the requirements.
- Implemented unit tests for the code in Test Driven Development using Agile, Scrum methodologies.
- Implemented business logic as per client requirements.
- Here we are following two-week sprint, after compensation of sprint conducting sprint review and sprint planning meetings. we are discussing any roadblocks and any dependency

Project2:

Project: ITS Assurance Dashboard

Client: Cisco

Duration: Feb2022toSep2022

Location: Bangalore

Team size: 7

Environment: Python 3.6, Django Rest Framework, Bit bucket, Linux, MySQL, Ansible, Jenkins

Project description:

- ITS Assurance Dashboard is a web-based application developed for Cisco, aiming to automate Linux server alerts and seamlessly integrate them into a user-friendly frontend dashboard.
- Developing a Python script to fetch alert data from remote Linux servers and generate well-structured reports, which can be easily distributed via email.
- Leveraging Ansible playbooks to efficiently configure the remote servers for seamless integration with the application.

Responsibilities:

- Interacted with clients to discuss Requirements and involved in Technical, Functional analysis.
- Every day attending the client meeting and discussing the requirements.

- Implemented unit tests for the code in Test Driven Development using Agile, Scrum methodologies.
- Implemented business logic as per client requirements.
- Here we are following two-week sprint, after compensation of sprint conducting sprint review and sprint planning meetings. we are discussing any roadblocks and any dependency.

Project 1:

Project: Cuit-Columbia

Client: Columbia University

Duration: Feb 2020 to Feb2021

Location: Bangalore

Team Size: 25

Environment: Python 3.6, Django Rest Framework, Git lab, GIT, Linux, Docker, MySQL, Kafka.

Project Description:

- Developed Cuit-Columbia, a secure web-based application designed exclusively for Columbia University, enabling client customers to access and manage their records, courses, student information, and department details within the education system.
- Implemented robust security measures including permission controls and JWT token authentication to ensure that unauthorized users are restricted from accessing sensitive information of other users.

Responsibilities:

- Interacted with clients to discuss Requirements and involved in Technical, Functional analysis in daily stand ups.
- Used Micro services architecture to build modular and maintainable applications.
- Implemented unit tests for the code in Test Driven Development using Agile, Scrum methodologies.
- Implemented business logic as per client requirements.
- Here we are following two-week sprint, after compensation of sprint conducting sprint review and sprint planning meetings.
- we are discussing any roadblocks and any dependency.

Description:

I affirm that the information provided above is accurate to the best of my knowledge, and I take full responsibility for the accuracy and authenticity of the details mentioned.

(Mahesh Kumar Reddy)
