SUMMARY

Certified Cloud Engineer (Azure AZ-104, AZ-305, AZ-700; GCP; RHCSA) with expertise in hybrid cloud infrastructure, automation, and DevOps practices. Seeking a motivating and challenging position as **Site Reliability Engineer/DevOps** role in a growth-focused environment.

EXPERIENCE

Cloud Engineer

LUMEN **March 2022 - Present, Bangalore**

- Discovery & Asset Intelligence: Implemented Flexera Cloudscape RN150 to automate enterprise asset discovery and application stack mapping, providing the data-driven insights necessary for infrastructure reliability analysis.
- Disaster Recovery & Hybrid Cloud: Led migrations for 30+ enterprise customers using VCDA, Zerto and Azure Migrate, ensuring zero-impact service reliability.
- Toil Reduction & Automation: Eliminated 40% of operational toil by architecting an Ansible framework for automated host management, patching, and service operations.
- Resource Optimization & Cloud VM Engineering: Optimized large-scale VMware infrastructure using vMotion and DRS to maximize CPU, memory, and I/O efficiency, while also building and configuring virtual machines across Azure and AWS to support scalable and reliable cloud workloads.
- Infrastructure as Code (IaC): Designed and maintained modular Terraform repositories to standardize infrastructure patterns, reducing time-to-market for new projects and ensuring 100% environment consistency.
- Cloud Native Orchestration: Managed Kubernetes manifests and Helm templates for microservices while automating Docker CI/CD pipelines.
- Observability & SLOs: Engineered full-stack observability via Grafana, automating resolution workflows to maintain high availability and meet strict SLA/SLO targets.
- Performance Engineering: Executed post-migration hardening and NUMA-optimization, boosting performance by 20% and reducing downtime by 30%.

Server Engineer (Linux)

Nivid Technologies **January 2021 - December 2021, Kerala**

- System Hardening & Security: Managed and hardened Linux systems (RHEL 7.x/8.x, Ubuntu, CentOS) with strong expertise in user management, permissions (standard, special, ACL), and SSH access to ensure compliance with strict security policies.
- Change Management & Stability: Maintained system stability and security posture by performing routine patch management, kernel upgrades, and software installations using native package managers (YUM, APT) across 200+ servers, achieving 98% patch compliance within 24 hours and minimizing unauthorized changes.
- Virtualization Reliability: Installed and managed XenServer hypervisors supporting 50+ virtual machines, leveraging XenCenter GUI for proactive health monitoring and efficient resource allocation, which improved virtualization uptime to 99.9%.
- Performance: Administered and monitored Linux systems across a distributed environment, ensuring optimal performance and achieving 99.5% service uptime, while reducing average troubleshooting time by 30% through proactive monitoring.

SKILLS

Operating Systems: RHEL 7.x/8.x, Ubuntu 20.04/22.04, CentOS 7/8, Windows Server 2012/2016/2019.

Scripting: Bash Shell.

Networking: TCP/IP, DNS, DHCP, HTTP/HTTPS, FTP, SMTP, SNMP, SSH, WMI, WinRM, Azure Networking. Load Balancing, Firewalls.

Cloud Platforms: Microsoft Azure , Google Cloud Platform (Compute Engine, IAM, VPC), AWS (EC2, VPC, ELB) , VMware Cloud.

Infrastructure and Automation: Ansible, Terraform, ARM Templates.

Containerization & Orchestration: Kubernetes (deployments, pods, services), Helm, Docker.

Observability & Monitoring: Prometheus, Grafana, ELK Stack, Dynatrace.

Version Control & CI/CD: Git, GitHub. Jenkins.

Ticketing Tool: BMC Remedy, Service NOW.

EDUCATION

B.Tech/B.E.

APJ Abdul Kalam Technological University, Kerala • 2019 • 7.4/10

PROJECTS

Automated Infrastructure Deployment with Ansible

Lumen

- Designed and implemented modular Ansible playbooks to provision Linux servers and configure critical services including Apache webservers, user accounts, and SSH key distribution.
- Ensured 100% environment consistency across 100+ servers, strictly adhering to Infrastructure as Code (IaC) principles.
- Reduced manual setup time by 70%, significantly improving efficiency and reliability in server provisioning and configuration.

Patch Management & System Reliability Automation

Lumen

- Engineered Ansible playbooks to automate OS patching, package installations, service management, and firewall configuration across a 200+ server fleet, achieving 95% patch compliance within 24 hours of release and reducing manual intervention by 70%.
- Achieved 95% patch compliance within 24 hours of release, ensuring rapid remediation of vulnerabilities.
- Enhanced overall system uptime to 99.9% and reduced the security exposure surface by 40% across 200+ servers through streamlined automation of patching, configuration management, and monitoring.

Custom Monitoring & Alerting Tool

Nivid Solutions

- Built a Shell script-based synthetic monitoring solution in Git Bash to perform continuous HTTPS health checks using curl, monitoring 50+ endpoints and detecting downtime within 30 seconds.
- Integrated SMTP email alerts to automatically notify stakeholders within 30 seconds of downtime detection.
- Reduced Mean Time to Detect (MTTD) by 70% and improved incident response efficiency by enabling rapid visibility into outages across 50+ monitored endpoints.

CERTIFICATIONS

Red Hat Certified System Administrator (RHCSA) | Red Hat | 2025

Introduction to AI and ML in Google Cloud | Google | 2025

Microsoft Azure Fundamentals (AZ-900) | Microsoft | 2022
