SUMMARY

Senior DevOps Engineer with 5+ years of experience across AWS and Azure, focused on cloud automation, CI/CD, and reliable infrastructure at scale. Experienced in building secure, scalable systems, and improving deployment efficiency, with a growing focus on integrating AI-driven tooling to enhance operational intelligence and performance.

SKILLS

- **Cloud Platforms:**AWS (EKS, ECS, Fargate, Lambda), Azure (AKS, App Services, Key Vault, Azure AD, Entra)
- **Containerization and orchestration:** Docker, Kubernetes (EKS, AKS), and Helm charts
- **Infrastructure as Code (IaC):**Terraform, Terragrunt, AWS CloudFormation
- **Automation and configuration management**: Ansible AAP
- **CI/CD and DevOps Tools**:Jenkins, Azure DevOps, and GitHub Actions
- **Databases**: PostgreSQL, MySQL, and MongoDB
- **Monitoring and Logging**: ELK Stack, Prometheus, Grafana, Nagios, Loki, and New Relic
- **Web Servers and Proxies:** Nginx
- **Authentication:** LDAP, Azure AD
- **Programming languages:** .NET, Python, Shell, Bash
- **Operating Systems:**Linux (Ubuntu, CentOS, RHEL), and Windows
- **Disaster recovery**
- **Direct Server Support**
- **Database migration**

EXPERIENCE

DEVOPS ENGINEER, 05/2025 - Current
Evolent Health, Pune, IN
Evolent is a healthcare solutions company that partners with providers and payers to deliver value-based care through clinical expertise, data analytics, and technology-driven solutions.

- **Transformed infrastructure delivery velocity** by architecting a fully automated provisioning platform across Azure and VMware, reducing environment readiness timelines from weeks to **under 2 days**.
- **Scaled standardized infrastructure delivery** through reusable, modular IaC frameworks, enabling consistent deployment of **80+ production systems** with embedded security and compliance controls.
- **Established platform-level automation standards** using Terraform, Terragrunt, and Ansible, shifting infrastructure provisioning from manual execution to self-service, repeatable pipelines.
- **Embedded security and configuration enforcement at build time** by developing enterprise-grade server hardening and database automation, eliminating post-deployment fixes and drift.
- **Solved complex identity and integration challenges** by designing fully automated domain onboarding within infrastructure workflows, removing manual touchpoints across hybrid environments.
- **Improved release reliability for mission-critical applications** by re-engineering deployment automation, introducing deterministic sequencing, validation, and rollback-safe execution.
- **Enhanced CI/CD observability and control** by implementing real-time deployment feedback mechanisms, accelerating failure detection and improving operational confidence during releases.
- **Elevated engineering maturity across teams** by delivering reusable automation frameworks and documentation that enabled independent execution and reduced platform dependency.

SENIOR DEVOPS ENGINEER, 06/2022 - 05/2025
Thinkbridge Software, Pune, India
ThinkBridge specializes in enhancing and optimizing **client technology ecosystems** for **efficiency and growth**.

- Enhanced deployment efficiency across the **AWS ecosystem** by provisioning infrastructure using **Terraform** and developing **reusable Terraform modules**, streamlining deployment processes.
- Improved application hosting performance and reliability by orchestrating **AWS Serverless solutions** using **ECS Fargate** and **Lambda**, incorporating **multi-AZ**, **autoscaling**, and **load balancing**.
- Implemented **containerized .NET and Python applications** on **AWS Lambda**, integrating **EventBridge**, **SQS**, and **API Gateway** triggers to optimize functionality.
- Spearheaded **CI/CD pipelines** using **GitHub Actions** and **Jenkins** for deploying applications on **AWS serverless services**, enhancing development workflow efficiency.
- Implemented **parallel processing** in **multi-stage Jenkins and Azure DevOps pipelines** for **SQC testing** and **data migration** processes.
- Directed **source code repository management** across **GitLab**, **GitHub**, **Azure DevOps**, and **CodeCommit**, implementing **branching strategies** to support parallel development and faster code reviews.
- Improved **code quality and security** by integrating **SonarCloud** with **Azure DevOps** and **GitHub Enterprise** for automated code scanning and analysis.
- Led **on-premises to AWS migration**, moving application servers to **EC2** and databases to **RDS**, supported by structured inventory management and migration strategies.
- Implemented **secure VPN connectivity** across **multiple AWS accounts** and **on-premises networks** with peered network architectures.
- Deployed **ECS clusters** with **Nginx proxy configurations** to enhance **network security** and optimize performance within a **unified DNS architecture**.
- Successfully migrated **production on-premises databases** to **Azure SQL Managed Instances** and application servers (**IIS**) to **Azure SaaS services**.
- Architected and managed **Kubernetes clusters** enabling **zero-downtime deployments**, implementing **NGINX Ingress**, **multi-domain routing**, and **health probes**.
- Developed and maintained **Helm charts** for streamlined deployments, automated configuration management, and **CI/CD integration**, ensuring consistent and repeatable releases across environments.

IT INFRASTRUCTURE ENGINEER, 05/2021 - 05/2022
Vadict Innovation, Vadodara, India
Vadict digitizes and automates company assets using **IIoT sensors and AI models**.

- Designed and implemented a **containerized Nagios monitoring system** for a distributed network, enabling automated service monitoring, health checks, and **proactive issue resolution** through alerting.
- Led **containerized logical database replication**, ensuring reliable data synchronization across multiple servers and improving data availability.
- Integrated **RADIUS and LDAP authentication services** in a containerized environment to strengthen secure device authentication within the Unifi network.

EDUCATION

K.K Wagh Institute of Engineering , *Nashik, Maharashtra, 06/2021*
Bachelor of Engineering: **Information Technology**

CERTIFICATIONS

- **AZ-900**: Microsoft Azure Fundamentals. - Microsoft
- **MTA**: Introduction to Programming Using Python - Microsoft

LANGUAGES

Hindi: First Language

English: C2
Proficient (C2)

Gujarati: C2
Proficient (C2)

Marathi: C2
Proficient (C2)

PROJECTS

Question/Answer Matching System

- A web-based machine learning application to map the candidate's answers to their respective questions for automated score generation.
- **Technology:** LSTM and CNN model, Django Framework, Python, TensorFlow and AWS services like EC2,S3, SageMaker.

Sentiment Analysis Model

- An unsupervised learning model for Sentiment Analysis of Restaurant Review dataset with 82.5% accuracy.
- **Technology:** Python Libraries Sklearn, NumPy, Pandas.

Accreditation System

- A web-based application for managing all the Accreditation related activities of an Education Institute.
- **Technology:** Python, Django, MySQL, Html, CSS, JavaScript, jQuery.
