Nipun Sharma | Senior DevOps Engineer

Pune, India | nipunncs.2011@gmail.com | +91 8379060959 | Linkedin Profile

Profile Summary

- **Senior DevOps Engineer** with **5.2 years** of experience in **designing, automating, and optimizing cloud infrastructure**, **CI/CD pipelines**, and deployments for **high availability** and seamless operations. Proficient in **AWS** with hands-on experience in **GCP** and **Azure**, skilled in **multi-cloud strategies**, **cloud security**, and **IaC** using **Terraform** and **Terragrunt**. Expert in **CI/CD automation** with **GitHub Actions, GitLab CI/CD, Jenkins,** and **Travis CI**. Strong background in **Docker, Kubernetes (EKS, GKE), Helm** for scalable, **containerized** environments. Experienced in **production troubleshooting**, **incident management**, **secure cloud architecture**, and **compliance** in **government-secured** setups. Passionate **mentor** and **trainer** in **DevOps, Kubernetes, and CI/CD**, collaborating closely with cross-functional teams to streamline workflows and enhance efficiency.

Technical Skills

Cloud Platforms	AWS, GCP, Azure DevOps
DevOps	Linux, Kubernetes EKS, Docker, Terraform Terragrunt, Ansible, Helm, Nginx, Git, Openstack
Monitoring & Logging	Prometheus, Grafana, Cloudwatch
Incident Response Tool	Sentry, Splunk, Slack, Pagerduty
CI/CD	Github Actions, Jenkins, ArgoCD, Gitlab, AWS Pipeline, Travis CI
Scripting Languages	Bash, python, shell
Web Servers & Networking	Nginx, OpenVPN, Domain Management

Work Experience

Senior DevOps Engineer | crest{data}.ai | Apr'25 – Present

DevOps Engineer | crest{data}.ai | Feb'24 – Mar'24

- **Cloud Architecture & Optimization:** Architecting and optimizing scalable, multi-region cloud environments using open-source technologies to enhance system resilience and efficiency.
- **Infrastructure Security & Administration:** Administering and securing Linux-based infrastructures by implementing robust cloud networking policies and best security practices.
- **Cloud Development & Management:** Developing and maintaining high-performance cloud architectures on AWS and Google Cloud to support seamless application deployment.
- **CI/CD Automation & Deployment:** Automating and streamlining CI/CD pipelines using Infrastructure as Code (IaC) tools, Configuration Management, and Jenkins to accelerate software delivery.
- **Monitoring & Performance Optimization:** Enhancing system observability by implementing advanced monitoring frameworks, ensuring real-time performance tracking and proactive issue resolution.
- **Collaboration & Cloud Strategy:** Collaborating cross-functionally with development and operations teams to drive cloud adoption strategies and optimize deployment workflows

.

DevOps Engineer | ThinkFuture Technologies | Remote | Dec'20 – Jan'24

- **CI/CD Pipeline Optimization:** Designed and optimized CI/CD pipelines to accelerate software delivery and deployment efficiency.
- **Test Automation & Quality Assurance:** Automated and streamlined testing workflows, enhancing product quality and reducing manual intervention.
- **Cross-Functional Collaboration:** Collaborated with development and operations teams to ensure seamless solution integration & customer satisfaction.
- **Infrastructure Management:** Leveraged and fine-tuned Linux, AWS, Nginx, Docker, Kubernetes, and Terraform to enhance infrastructure performance and scalability.

Projects

Splunk

Tools & Technologies: **Terraform, Terragrunt, EKS, Splunk Dashboards (Skynet), Helm, GitLab, Jenkins, AWS Secret Manger,VPC, Storage S3, RDS, ELB, KMS, WAF, CDN, Route53**

Duration: Feb 2024 - July 2025

Responsibilities:

- Designing and managing multi-region signalFX environments to enhance system availability and ensure comprehensive observability, tracing, and monitoring capabilities.
- Utilising Terraform, Terragrunt to create and manage Infrastructures on AWS.
- Provisioned architecture using terraform
- Deployed and managed configurations using helm charts
- Creating and maintaining the CICD pipeline using Gitlab CI/CD, Jenkins
- Monitoring any issue via K8s alerts , Slack notifications and Splunk Observability Dashboards

NetSkope (On Prem)
Tools & Technologies: **Terraform, Ansible, Kubernetes, Rancher, Stackstorm, GithubActions, Salt, Openstack**
Duration: August 2025 - Present
Responsibilities:

- Ensure high availability, scalability, and resilience of production infrastructure across global data centres through automation and standardized processes.
- Resolved and managed production issues across multiple regional data centres and Points of Presence (PoPs).
- Worked on a standardized process for load balancer deployment for any PoP..
- Developed GitHub Actions workflows for automated remediation of known server issues.
- Improved system reliability by reducing manual intervention and response times.

MoBerries

Tools & Technologies: **Terraform, Terragrunt, Helm Charts, AWS, Travis CI, Kubernetes, Sentry, Mongo Atlas, Route53, Velero, IAM, Load Balancers, AWS CDN, AWS Secret Manager, Operators, Prometheus, Grafana Dashboards, SNS, AWS Billing & Cost Management, Bash Scripting, Git**
Duration: October 2021 - January 2024
Responsibilities:

- Optimized and scaled a recruiting platform environment, improving cost-efficiency and deployment processes while enhancing system performance using Terraform Terragrunt on AWS.
- Reduced infrastructural costs while maintaining critical resources, improving efficiency and productivity.
- Managed project infrastructure, pipelines, and deployment processes, optimizing overall performance with Sentry, Cloudwatch alerts, Travis CI and Helm
- Managing DNS and Certificates for the Origin. Added DNSSEC onto the domain to avoid DNS spoofing.
- Configuration, maintenance and troubleshooting of deployed systems.
- Created clear and thorough documentations on Infrastructure.

Brucbond

Tools & Technologies: **AWS, Ansible, Terraform Cloud, Gitlab, IIS Server, AWS CodePipeline CodeDeploy, AWS Systems Manager, AWS Backups, AWS RDS, AWS Cloudwatch,OpenVPN**
Duration: March 2022 - December 2023
Responsibilities:

- Built a secure corporate banking infrastructure enabling global partner bank connectivity.
- Designed resilient systems for seamless operations and implemented ASGs with blue-green deployments across 13 production environments.
- Fixed Ansible AMI user data scripts for IIS setup, ensuring persistence across reboots.
- Delivered timely issue resolution, enforced security improvements, and enhanced infrastructure documentation via Confluence.

Omnamah, Keshet, Self.Best

Tools & Technologies: **AWS, Docker, Nginx, GitHub Actions, Git, GCP, Cloud NAT, VPN, Pub Sub, Interconnect**
Duration: December 2020 - September 2021 **Responsibilities**:

- Contributed to setting up the OmNamah startup application with automated CI/CD using GitHub Actions.
- Dockerized frontend and backend services, orchestrated via Docker Compose for consistent, scalable deployments on GCP.
- Implemented concurrent pipeline runs, scheduled cron jobs for instance cleanup, and resolved server space issues.
- Identified and fixed MongoDB security risks, ensuring data integrity.
- Optimized infrastructure for high traffic using RDS parameters and read replicas.

Certifications

- AWS Solutions Architect Associate
