THEJAS M

Cloud Engineer | DevOps Engineer | Platform Engineering

Bengaluru, Karnataka | +91 91130 26915 | thejasm52@gmail.com | linkedin.com/in/thejas-m

PROFESSIONAL SUMMARY

Results-driven Cloud & DevOps Engineer with 2+ years of progressive experience in cloud-native platform engineering, Kubernetes orchestration, and CI/CD automation. Demonstrated expertise in designing and managing Azure and AWS infrastructure supporting 400+ microservices with 99.9% uptime. Proven track record in leading zero-downtime migrations, building self-service developer platforms, and implementing DevSecOps practices. Recognized with Tech Titan Award and Wall of Awesomeness Award for exceptional contributions to platform automation and customer-facing solutions.

TECHNICAL SKILLS

Cloud Platforms: Microsoft Azure (AKS, VMs, Application Gateway, Key Vault, Monitor) | AWS (EC2, VPC, Transit Gateway)

Containers & Orchestration: Kubernetes, Azure Kubernetes Service (AKS), Docker, Helm, Container Registry, Microservices Architecture

CI/CD & IaC: Jenkins, GitHub Actions, Azure DevOps, Terraform, GitOps, Git, Bitbucket, Infrastructure as Code

Security & DevSecOps: HCL AppScan (SAST/SCA), Trivy, IAM, RBAC, Security Hardening, Golden Images, Certificate Management

Monitoring & SRE: Prometheus, Grafana, Azure Monitor, Centralized Logging, Alerting, Incident Management, Autoscaling

Scripting & Tools: Python, Bash, Shell Scripting, YAML, JSON, Linux Administration, Automation

PROFESSIONAL EXPERIENCE

Cloud Engineer | GoDigit General Insurance Limited, Bengaluru

April 2024 – Present

- Architected and deployed InfraOps self-service platform enabling developers to independently debug production/non-production issues, reducing operational support tickets by ~200/month and incident triage time by 40%
- Integrated HCL AppScan (SAST/SCA) and Trivy security scanning into Jenkins CI/CD pipelines, automating vulnerability detection and enforcing security-by-default with build failure gates on critical CVEs
- Designed and implemented AWS Transit Gateway in non-production environment, centralizing VPC connectivity using hub-and-spoke architecture and simplifying routing compared to complex VPC peering configurations
- Built centralized infrastructure status portal integrating service health, pod metrics, application logs with keyword search, security alerts, and planned migrations, establishing single source of truth for DevOps operations
- Collaborated on platform reliability engineering, Infrastructure as Code automation with Terraform, and cloud cost optimization initiatives supporting production-grade Kubernetes workloads at scale

Software Engineer | GoDigit General Insurance Limited, Bengaluru

April 2023 – April 2024

- Led end-to-end zero-downtime migration of 6 Kubernetes clusters and 400+ microservices from version 1.27 to 1.30, including cluster provisioning, progressive service migration, and automated validation workflows
- Developed Digit Application Status Page providing real-time service uptime monitoring, outage tracking, and customer-impacting flow visibility, enabling faster incident response and transparent communication with customers and partners
- Designed and built hardened Docker golden images with reduced vulnerabilities and security compliance, improving containerized application security posture across all deployment environments
- Created self-service Jenkins automation enabling developers to check service health, Kubernetes pod status, and access application logs across environments with one-click operations, eliminating ~200 monthly DevOps support requests
- Automated critical production operations including server restarts, disk cleanup, and service health monitoring with integrated email alerting, ensuring proactive issue resolution and system reliability
- Standardized infrastructure-level Bitbucket repository structure and branching strategies, improving team collaboration, code maintainability, and GitOps workflow consistency

Graduate Trainee Engineer | GoDigit General Insurance Limited, Bengaluru

June 2023 – April 2024

- Implemented CI/CD pipelines using Jenkins and Git, establishing automated build, test, and deployment workflows to ensure code quality and accelerate software delivery velocity
- Deployed and orchestrated containerized applications using Docker and Kubernetes, managing manifest files, Helm releases, and microservices deployment strategies for cloud-native architecture
- Configured cloud infrastructure monitoring on AWS and Azure including server health checks, CPU/memory utilization metrics, and automated scaling actions to maintain system reliability and optimal performance
- Designed reusable Infrastructure as Code (IaC) components using Terraform to provision scalable, highly available cloud resources with focus on disaster recovery and cost optimization

KEY PROJECTS, ACHIEVEMENTS & RECOGNITION

InfraOps Self-Service Platform – Developer Productivity & Operational Excellence

- Built centralized platform providing real-time Kubernetes pod health, service status, application logs with advanced search, reducing MTTD by 50% and enabling self-service debugging
- Implemented RBAC-based operational controls reducing direct cluster access by 50%, improved security posture, and cut monthly support tickets by 200 through developer enablement
- Recognized with Tech Titan Award for exceptional contributions to DevOps self-service automation and live operations, demonstrating significant impact on team productivity

Digit Application Status Page – Customer-Facing Transparency Solution

- Proactively developed UI solution providing transparent, real-time status view of customer-facing applications, improving communication with customers and partners during incidents
- Integrated service uptime tracking, outage notifications, and business flow impact analysis, enabling stakeholders to quickly assess system health and customer impact
- Awarded Wall of Awesomeness Award for innovative approach to customer transparency and creating a critical operational visibility tool serving internal and external stakeholders

Zero-Downtime Kubernetes Migration – Platform Modernization at Scale

- Orchestrated migration of 6 production Kubernetes clusters (400+ microservices) from v1.27 to v1.30 with zero service disruption using progressive rollout strategy
- Standardized infrastructure repositories and GitOps workflows, improving deployment consistency, reducing configuration drift, and accelerating release cycles

DevSecOps Security Integration – Shift-Left Security Automation

- Integrated automated SAST, SCA, and container image scanning (AppScan, Trivy) into CI/CD pipelines, detecting vulnerabilities early in development lifecycle
- Enforced security gates with automated build failures on critical CVEs, improving security posture and reducing remediation timelines across microservices platform

EDUCATION

Bachelor of Technology (B.Tech) in Computer Science Engineering

Maharaja Institute of Technology, Mysore | Graduated: 2023 | CGPA: 9.2/10
