- Completed SSC in C.D.O. Meri High School at 2015 with **89%**

AWARDS

- **Outstanding Employee** of the month July 2022
- Peer recognition and appreciation from clients
- Runner-up for Star of the Sprint

PROJECTS

Project 1: Orion
Duration: March 2024 – Present
Technologies: .Net Core 8, Postgres SQL
Roles and Responsibilities: Spearheaded the development of **centralized authorization packages with role-based access control (RBAC)** across multiple applications. Led and managed a team of 3 developers, **providing technical leadership** and ensuring **on-time delivery of high-quality enterprise solutions**.
Team Size: 5
Project Brief: The system is designed to manage multiple interconnected applications that work collaboratively to automate and streamline the policy generation process. Each application is responsible for specific functions, such as data input, validation, risk assessment, and policy creation. The architecture ensures seamless integration across modules, optimizing workflow efficiency and enabling real-time policy generation. The project emphasizes security, scalability, and flexibility to adapt to various policy types and regulatory requirements.

Project 2: Related to healthcare domain from Non-medic side
Duration: Dec 2021 – Nov 2023
Technologies: .Net Core, Angular 10, Web APIs, Entity Framework Core, MS SQL 2019, Azure DevOps.
Roles and Responsibilities: Collaborated with **product owners** to gather requirements, design wireframes, develop new features, **perform code reviews**, and resolve **critical production issues**.
Team Size: 22
Project Brief: A healthcare web application designed for UK hospitals, enabling seamless coordination among management, nurses, and staff. Features include managing organizations, units, wards, shift schedules, location assignments, shift swaps, overtime tracking, leave management, report generation, and role creation.

Project 3: Related to management system
Duration: Oct 2023 – Nov 2023
Technologies: Kendo, Angular 10
Roles and Responsibilities: Responsible for implementing the system's user interface by gathering the requirements from manager.
Team Size: 6
Project Brief: The system involves analysis of the system, computing the risk and management of the overall system.

Project 4: ERP system
Duration: Nov 2023 – Mar 2024
Technologies: .Net Core, Entity Framework Core, MS SQL 2019, Angular and Dev Express
Roles and Responsibilities: Designed and implemented **database functions for multi-table exports**, optimized stored procedures, built **XLSX import functionality**, and implemented **centralized logging with automated backup generation**.
Team Size: 4
Project Brief: This project entails documenting product and company details alongside various dependencies. It primarily encompasses an enterprise-level application tailored for managing CRUD operations related to the product.
