AUGUSTINE JEBAKUMAR VICTOR

Contact: +91-9629453377 | augustine.jebakumar01@gmail.com | LinkedIn: https://www.linkedin.com/in/augustine-

Full Stack Developer | Data Engineer

US H1B Visa Holder (Till Sep 2027)

GitHub URL: https://github.com/augustine-jeba

TECHNICAL SKILLS

Core Areas: Full Stack Development | Data Engineering | Data Analytics | A.I & Machine Learning.

Front-End Technologies: HTML | CSS | JavaScript | React.js | Angular

Back-End Frameworks: Node.js | Express.js | Spring Boot | FastAPI

Databases: MySQL | PostgreSQL | MongoDB | BigQuery | Redis

Cloud - Platforms: AWS (EC2, S3, Lambda) | Azure (Data Factory, Blob Storage) GCP (BigQuery, Pub/Sub, DataProc, Composer)

DevOps & CI/CD: Docker | Kubernetes | Git | Jenkins | Terraform | Ansible | Concourse CI | Cloud Monitoring

Data Engineering & Data Analytics: Python | PySpark | Apache Airflow | Kafka | Snowflake | Databricks | Azure Data Factory |BigQuery | Delta Lake | AWS Glue

Security: JWT | OAuth 2.0 | IAM | API Gateway | Apigee

A.I & Machine Learning: Gen AI | Agentic AI | Vertex AI | TensorFlow | Scikit-learn | Deep Learning | NLP | NumPy | Pandas | LangChain | OpenAI

Data Visualization: Tableau | Power BI | Excel | Looker Studio

Development Tools & IDE: VSCode | IntelliJ | Eclipse | Postman | Swagger | Jira

Project Management & Methodologies: Agile | Scrum

Programming Languages: JavaScript | Python | SQL

PROFILE SUMMARY

- **Technical Expertise:** 4+ years of hands-on experience in **Full Stack Development** and **Data Engineering**, specializing in building **scalable, data-driven, and AI-powered enterprise applications**.
- **Frontend Development:** Proficient in **React.js**, **HTML**, **CSS**, **JavaScript**, and **Tailwind CSS**, delivering responsive, user-centric interfaces optimized for performance and accessibility
- **Backend Development:** Skilled in **Node.js**, **Express.js**, **Spring Boot**, and **FastAPI**, developing microservice based architectures and RESTful **APIs** with up to **95% faster response times**.
- **Database & Data Integration:** Expertise in **MySQL**, **PostgreSQL**, **MongoDB**, and **BigQuery**, designing **ETL** pipelines and integrating data systems that improved data retrieval speed by 10×.
- **Data Engineering:** Experienced with **PySpark**, **Pub/Sub**, **DataProc**, **Snowflake**, **Azure Data Factory** (ADF), and **Databricks** for building real-time data pipelines**.**
- **AI & Machine Learning:** Proficient in **ML and Generative AI**, including **LLMs**, **Agentic AI**, and **RAG**. Developed Agentic AI systems to enable autonomous reasoning and contextual decision-making
- **Cloud Platforms:** Hands-on experience deploying, scaling, and managing cloud applications on **AWS, GCP** and **Azure** using services like EC2, Lambda, and Big Query to ensure reliability and performance.
- **DevOps:** Deployed secure, containerized solutions using **Docker, Kubernetes, Terraform, and Jenkins** for CI/CD, achieving 99.9% uptime.
- **Data Analytics:** Proficient in **Power BI**, **Tableau**, and **Excel**, translating large datasets into actionable insights that improved **business decision-making by 15%**.
- **Microservices Architecture:** Worked on designing scalable **microservice-based systems,** enabling modular architecture, efficient service communication, and streamlined deployment.
- **System Architecture & Design:** Strong background in **scalable system design**, **API optimization**, and performance tuning for distributed cloud environments.
- **Security Management:** Implemented **JWT**, **OAuth 2.0**, **IAM**, and managed APIs using API Gateway and Apigee for secure access control, rate limiting, and monitoring.
- **Agile & Collaboration:** Experienced in **Agile/Scrum**, **Git**, **Concourse CI**, and **Cloud Build**, promoting teamwork and delivering projects with **high quality code standards** (TDD, unit testing)

WORK EXPERIENCE

FULL-STACK DEVELOPER
Dec 2023 – Present | Cardinal Health International India, Bangalore
U.S.-based Healthcare Product Company headquartered in Dublin, Ohio

Project Overview:

Vantus is a **U.S.-based healthcare web and mobile application** developed by **Cardinal Health**, headquartered in **Dublin, Ohio**. It enables hospitals, clinics, and distributors across the **United States** to efficiently order, manage, and track **pharmaceutical products and medical equipment** through a secure and scalable digital system.

BackEnd Development:

As a **Backend Developer**, I worked on designing and developing **APIs & backend services**, connecting them seamlessly with databases to ensure efficient data flow and performance.

Project Title: Order Express Application – Vantus
Role: Backend Developer
Tools & Tech Stack: Node.js | Springboot | RESTful APIs | Microservices | Mongo | PostgreSQL | MySQL| Redis | Kafka | Docker | Kubernetes | Jenkins | AWS (Lambda, EC2, S3) | GCP (BigQuery) | APIGEE |PCF | Concourse CI

Responsibilities:

- Built and optimized **enterprise-grade backend microservices and RESTful APIs** using **Spring Boot, Node.js** to power core healthcare operations.
- Designed and optimized efficient data storage and queries in **MongoDB, PostgreSQL, and BigQuery**, handling large-scale healthcare datasets with high performance.
- Implemented **real-time, event-driven systems** using **Kafka and Redis** for asynchronous communication and caching.
- Led DevOps automation, including containerization with **Docker**, orchestration with **Kubernetes**, CI/CD pipelines through **Jenkins**, and automated infrastructure management using **Terraform**.
- Deployed and maintained **secure, scalable backend systems** on **AWS and GCP**, ensuring 99.9% uptime and high system resilience.

Key Achievements:

- Developed and deployed **25+ high-performance microservices and APIs**, improving system response times by **30%**.
- Optimized database performance across **MongoDB, PostgreSQL, and BigQuery**, reducing data retrieval latency by **20%**.
- Implemented **JWT/OAuth 2.0-based security**, achieving **100% audit compliance** and reducing vulnerabilities by **40%**.
- Performed **Performance Engineering and Load Testing** using **Dynatrace**, identifying system bottlenecks and optimizing backend throughput for peak traffic scenarios.
- Reduced **API response time by up to 40%** and **memory usage by 25%** through profiling, query tuning, and code-level optimization.
- Improved API security and code quality by integrating **Veracode** and **SonarQube** into the CI/CD pipeline.

Front-End Development
Cardinal Health International India, Bangalore
U.S.-based Healthcare Product Company headquartered in Dublin, Ohio

As a Front-End Developer, I designed and developed highly responsive, user-centric web and mobile interfaces for the **Vantus healthcare application**, focusing on seamless integration with backend APIs, optimized performance, and an improved end-to-end user experience across platforms.

Project Title: Order Express Application – Vantus
Role: Front-End Developer
Tech Stack & Tools: HTML | CSS | JavaScript | React.js | Angular | Redux | Tailwind CSS | Node.js

Responsibilities:

- Built dynamic, responsive, and reusable UI components using **React.js** and **Angular**, ensuring consistent design and cross-browser compatibility.
- Styled applications using **Tailwind CSS**, maintaining a consistent **design system** for rapid UI development.
- Integrated front-end components with backend REST APIs using **Node.js**, enabling real-time data synchronization and smooth user interactions.
- Managed state effectively with **Redux & Context API** to support user interaction and **real-time data updates**.
- Enhanced component modularity and maintainability by leveraging **React Hooks** and **functional components** streamlining code structure and improving developer productivity.

- Implemented best practices in **responsive design, cross-browser testing, and performance optimization**, delivering smooth and consistent UI across devices.

Key Achievements:

- Delivered **50+ reusable UI components**, reducing front-end development time by **30%**.
- Built **50+ reusable components** with **React and Angular**, accelerating **feature development** and maintaining design consistency.
- Optimized **application performance** through modern tooling (**Webpack**), reducing **load times by 25%**.
- Implemented **efficient state management** using **Redux and Context API**, enabling **real-time updates** and smoother workflows.
- Integrated **front-end with backend APIs** using **Node.js**, ensuring seamless **data flow** and **dynamic functionality** across the platform.

DATA ENGINEER
May 2023– Dec 2023 | Cardinal Health International India, Bangalore

As a Data Engineer at Cardinal Health, I contributed to **Vantus**, a U.S. healthcare platform for medical product ordering. Designed and optimized **scalable data pipelines**, integrated **large-scale healthcare datasets**, and enabled **analytics, reporting, and ML initiatives**. Ensured **high data quality, reliability**, and **actionable insights** to enhance decision-making and operational efficiency.

Project Title: Customer Data Behavior - Vantus Application
Role: Data Engineer
Tech Stack & Tools: Python | Pyspark | SQL | AWS (S3, Lambda, Redshift) | GCP (BigQuery, IAM) | Cloud SQL | Data Factory

Responsibilities:

- Designed and built **scalable data pipelines** using **AWS Glue and Lambda**, processing **10TB+ healthcare data daily**.
- Ingested and analyzed **streaming and batch data** stored in **S3 and Redshift**, generating actionable patient and operational insights.
- Automated **ETL/ELT orchestration** using **AWS Step Functions**, **GCP Composer**, and **Cloud Functions**, improving reliability and reducing latency by **30%**.
- Enforced **HIPAA compliance and data security** with **IAM policies,** encryption, **and role-based access** across multi-cloud environments.
- Deployed **predictive ML models** on **Vertex AI** to forecast patient churn and medication non-compliance.
- Optimized **data storage** and query using **Redshift, BigQuery** ensuring low-latency data retrieval for analytics.
- Implemented **infrastructure-as-code** via **Terraform and CloudFormation**, supporting scalable and reproducible deployments.
- Performed **data cleaning, transformation, and analytics scripting** with **Python (Pandas, PySpark)** and **SQL**

Key Achievements:

- Achieved **95%+ data pipeline reliability**, ensuring continuous availability of critical healthcare data for analytics and reporting.
- Reduced **ETL runtime by 30%** through optimized Spark and Glue jobs across AWS and GCP.
- Delivered **interactive dashboards** in **Power BI** for clinical and operational teams, enabling **data-driven decision-making**.
- Improved **predictive analytics outcomes** by designing and deploying multiple **machine learning models** to forecast patient behavior and medication adherence.
- Enhanced **data processing efficiency** by optimizing large-scale datasets **(10TB+),** reducing ETL processing time by **30%**.
- Boosted operational efficiency by automating **data quality checks, alerts, and workflow monitoring** through Cloud Composer and AWS Step Functions.
- Enabled real-time analytics by building data pipelines with **Kafka**, **Pub/Sub**, and **BigQuery**, reducing latency for critical healthcare insights from hours to seconds.

Machine Learning Engineer
Jun 2022 – May 2023 | Open Turf Technologies, Bangalore, India

Project Title: AI-Powered Conversational Assistant
Role: Machine Learning Engineer
Tech Stack & Tools: Python | LangChain | OpenAI | Llama 2 | Groq | RAG | GenAI | Agentic AI | Hugging Face | FastAPI | Streamlit | Power BI

Project Overview:

Developed an **end-to-end AI chatbot** using **OpenAI GPT models**, **Llama 2**, and **Groq inference**, capable of retrieving domain-specific knowledge through **Retrieval-Augmented Generation (RAG)** and performing **autonomous reasoning tasks** using **Agentic AI frameworks**.

The system provided contextual, human-like responses, real-time analytics, and seamless integration with enterprise data sources.

Responsibilities:

- Designed and implemented **LLM-powered chat workflows** using **LangChain** and **OpenAI API** to handle multi-turn, context-aware conversations.
- Integrated **RAG pipelines** combining **vector databases** with **custom embedding models** for domain-specific document retrieval.
- Deployed **Llama 2 models on Groq inference servers**, optimizing response latency and cost.
- Built **agentic AI modules** capable of autonomous task planning — including knowledge search, summarization, and dynamic decision-making.
- Created **FastAPI endpoints** to expose the chatbot's backend as a scalable REST API.
- Implemented **prompt engineering**, **context management**, and **memory chains** to maintain personalized, coherent interactions.
- Monitored model performance through **Power BI dashboards**, analyzing token usage, latency, and user engagement metrics.
- Conducted **fine-tuning and evaluation** of LLMs using **Hugging Face Transformers** to enhance domain accuracy.

Key Achievements:

- Built and deployed a **fully functional GenAI chatbot** integrated with enterprise knowledge bases, improving query resolution time by **65%**.
- Achieved **real-time reasoning and contextual understanding** through **Agentic AI orchestration**, enabling the system to perform multi-step autonomous actions.
- Developed **custom AI workflows** (summarization, Q&A, report generation) that automated repetitive tasks for business users.
- **Received special recognition from senior leadership for driving the company's first GenAI initiative**, integrating LLMs and RAG to automate customer support and setting the foundation for future AI transformation projects.

Full-Stack Developer
Jun 2022 – May 2023 | Open Turf Technologies, Bangalore, India

Project Title: Find Green – EV Charging Station Booking Application
Role: Full Stack Developer
Technologies & Tools: Angular | Node.js | MongoDB | PostgreSQL | RESTful APIs | Google Maps API | Razorpay | AWS (EC2, S3) | Git

Project Overview:

Find Green is a **full-stack web application** that helps **electric vehicle (EV)** users **find, book & manage** charging stations **in real time.** It makes the charging process faster and easier by reducing waiting time**, handling** slot scheduling**, and offering** secure payments **with** live map navigation **for nearby stations.**

Responsibilities:

- Developed **end-to-end full-stack** features using **MEAN** stack, covering UI, REST APIs, and data models.
- Built **responsive UI components** and dashboards using **Angular** ensuring a smooth and accessible user experience.
- Designed and integrated **RESTful APIs** with **Node.js** connecting with **MongoDB** and **PostgreSQL** databases.
- Optimized **database queries and API payloads**, improving performance and scalability.

Significant Impact:

- Integrated **Google Maps API** for real-time navigation and live station tracking.
- Designed **slot management logic** supporting cancellations and rescheduling, improving user convenience
- Implemented **Razorpay gateway** for secure and seamless transactions.
- Introduced **automated notifications and rewards**, increasing user engagement and retention.
- Contributed to a **30% increase in operational efficiency** and higher user satisfaction across the platform.
- Enhanced **system response time by 25%** through optimized API design and reduced payload size.

Mobile Application Developer (React Native)
Jan 2022 – Jun 2022 | Dot Com Info Way, Madurai, India

Project Title: SmartShop - E-Commerce Mobile Application
Role: Application Developer
Technologies & Tools: React Native, JavaScript, Node.js, REST APIs, MySQL, Firebase, Redux, JSON, Microservices

Project Overview:

Contributed to a full-featured Ecommerce mobile application for a retail client. The app allowed users to **browse, purchase** and **track products in real time** offering a smooth and secure shopping experience.

Focused on building a scalable, cross-platform mobile solution integrated with backend APIs, payment gateways and real-time notifications.

Responsibilities & Key Areas:

- Built and maintained a **cross-platform mobile application** using React Native for Android devices.
- Developed **reusable UI components** and responsive layouts for product catalogs, search filters, and cart pages.
- Integrated **REST APIs and Firebase** for authentication, product data, order tracking, and push notifications
- Implemented offline data caching using **AsyncStorage** and **Redux Persist**, allowing users to browse products and access cart data without internet connectivity.
- Enabled real-time engagement, alerts and transactional updates using services like OneSignal and FCM.

EDUCATION

Master of Computer Applications (MCA)
The American College, Madurai, India
CGPA 9.1/10

Bachelor of Science(B.Sc) in Mathematics
The American College, Madurai, India
CGPA: 8.9/10

Diploma in Data Science
The American College, Madurai, India

ACHIEVEMENTS & OUTCOME

- **Full Stack Development:** Designed and developed dynamic, high-performance web and mobile applications using **React, Angular, Node.js and springboot** delivering seamless UI/UX and optimized backend systems.
- **Backend Engineering:** Built and deployed **30+ RESTful APIs** following microservices architecture, enhancing scalability and maintainability across distributed systems.
- **Frontend Development:** Engineered responsive interfaces with **React.js, Angular, HTML5, CSS3,** JavaScript (ES6+), and TypeScript, achieving a 40% improvement in page load times and accessibility across devices.
- **Database Optimization:** Implemented and optimized **PostgreSQL, MongoDB, MySQL, and** Big Query databases—achieving **10× faster query performance**
- **Cloud Computing**: Deployed and managed applications on **AWS** (EC2, S3, Lambda), **GCP** (BigQuery, Cloud Functions, Dataproc), and **Azure** (Data Factory, Cosmos DB).
- **Devops:** Automated deployment pipelines using **Docker, Kubernetes, and Jenkins**, cutting release cycles by 40%**.** Integrated **Veracode** and **SonarQube** for continuous security and code quality checks. Performed load testing and monitoring via **Dynatrace** and **JMeter**.
- **Data Engineering:** Designed and automated large-scale data pipelines using **PySpark**, **Databricks**, Snowflake**,** AWS Glue**,** and Azure Data Factory, enabling real-time analytics.
- **Data Analytics :** Performed advanced data analysis using Python, SQL, and Power BI to extract meaningful patterns from healthcare and workflow data.
- **AI/ML Engineering:** Built and deployed **Generative AI** and **Agentic AI** solutions using **OpenAI, LLaMA,** and LangChain enabling reasoning, knowledge retrieval, and adaptive decision-making.
- **Microservices & API Architecture:** Designed and deployed scalable microservices architecture with API gateway, load balancing, and containerized deployments.
- **Certifications & Continuous Learning:**
  • Completed certifications in **Full stack Development, Data Engineering, and Machine Learning**.
  • Solved numerous **DSA problems** on **LeetCode, GFG** and **Striver Sheet**
  • Holder of **Typewriting (Basic & Advanced)** certifications.

SOFT SKILLS

Effective Communication:
Clearly articulate ideas and provide regular updates to ensure team and stakeholder alignment.

Collaboration & Teamwork:
Strong team player who values cooperation and contributes actively to shared goals.

Time Management:
Efficiently prioritize and handle multiple tasks, consistently meeting deadlines without compromising quality.
Accountability:
Take ownership of tasks end-to-end, delivering high-quality outcomes with reliability and commitment.
Quick Learner:
Rapidly adapt to new technologies, concepts and continuously upgrading skills to meet evolving challenges.
Problem-Solving Attitude:
Proactively identify issues, implement effective solutions, and drive continuous improvement.
Adaptability:
Flexible in changing environments and comfortable working across diverse teams and time zones.
Interpersonal Skills:
Build strong professional relationships and foster collaboration through clear, empathetic communication.
