Professional Summary

Test Automation Engineer with 3+ years of experience in **healthcare** and **enterprise** applications, specializing in test automation using **Selenium (Java/C#),BDD (Cucumber/SpecFlow), API testing**. Proven track record in automating **700+ test cases**, reducing manual effort by **40%,** and ensuring **95%+** test case stability in CI/CD pipelines. Experienced in designing scalable automation frameworks, and collaborating across Agile teams to deliver secure, reliable, and high-quality releases. Adept at **root cause analysis**, **test strategy creation**, and **continuous process improvement**.

Skills

- **Automation Tools:** Selenium (Java/C#), Postman, JMeter (Performance),
- **Frameworks:** BDD (Cucumber, SpecFlow – Gherkin),Hybrid, Page Object Model (POM)
- **Programming Languages:** Java, C#
- **CI/CD**: Jenkins, GitHub Actions, Allure Reports
- **Agile Tools:** JIRA, Confluence, Zephyr, Scrum, Browserstack, Azure Board
- **Testing Practices:** SDLC, STLC, Integration, Regression, Smoke, Functional, API
- **Automation Processes:** Test Case Design, Automation Roadmap, Framework Enhancement, Bug Tracking & Reporting, Continuous Improvement

Work Experience

Test Engineer, Tietoevry India ***Aug 2022 - Present***

- Automation Test Engineer with 3+ years of experience in Healthcare and Insurance domains, skilled in **Selenium WebDriver with C#, Java, BDD (SpecFlow, Cucumber)**, API testing.
- Experienced in building scalable frameworks (POM), cross-browser testing (Browser Stack), and delivering **600+** automated test cases reducing manual effort by **70%**. Strong expertise in Agile, defect management (Jira, Azure), and reporting.
- Proficient in **Selenium** for efficient automation testing. Have knowledge of building automation frameworks (Java, Selenium) and automation tool- **Cucumber (BDD), following the Page Object Model (POM) for Web/UI Automation.** Good in designing the automation scripts and experience in writing customized x paths. Experience in Automation testing using selenium web Driver
- Analyzing and maintaining Test Cases using and mapping release requirements to test case creation.
- Mapping manual regression test cases into automation test scripts for test code coverage leading to reduction manual regression testing efforts.
- Experienced in version control tools – **GIT, GitHub Actions, Browser Stack** for agile deployments and environments.
- Skilled in Rest API/API Testing along with POSTMAN different use cases.
- Actively contributing for domain specific testing - Test Cases creation, engaging in Ad-Hoc Testing, and maintaining Defect Reports following RTM Matrix, aligning SDLC & STLC

Projects

Symplr – Provider Portal Application | Selenium (C#), SpecFlow, BDD framework

Tech Stack: Selenium WebDriver with C#, Spec Flow (BDD), Page Object Model (POM), Cucumber Framework, Extent Reports, Azure, Git, Git Desktop

- Designed, developed, and executed automated test scripts using **Selenium WebDriver with C#** and Spec Flow BDD framework.
- Set up and maintained automation test environments leveraging C#, Java, Selenium WebDriver
- Applied **Page Object Model** (POM) design pattern to build reusable, maintainable, and scalable automation framework.
- Worked extensively with **Git and Git Desktop** for version control and PR (Pull Request) workflows, enabling efficient collaboration and code reviews.

- Participated in **Agile** ceremonies (sprint planning, daily stand-ups, retrospectives) and provided automation status updates. Performed defect identification, logging, tracking, and retesting using Azure Board.
- Identified web elements using multiple locators (XPath, CSS, ID, Name) and implemented dynamic handling strategies.
- Managed pipeline triggers and monitoring in Azure, and fixing performance issues in the script
- Conducted client demos showcasing automated test coverage and execution results.
- Handled script exception management and debugging to ensure smooth execution across multiple browsers.
- Conducted cross-browser and cross-platform testing on **BrowserStack** to ensure compatibility across devices and browsers.

Symplr – Smart E-Badge Application | Manual Testing

- Designed and executed **comprehensive test cases, scenarios, and plans** aligned with business requirements and specifications.
- Logged, tracked, and validated defects using Azure DevOps, ensuring timely resolution and improved product stability.
- Analyzed requirements for new features and collaborated with stakeholders to refine acceptance criteria.
- Authored **detailed test cases** and facilitated both **internal** and **external reviews** to ensure completeness and accuracy.
- Conducted **functional, UI, integration, smoke, sanity,** and **regression testing**, ensuring end-to-end product validation.
- Provided client demos for user stories and feature releases, enhancing transparency and customer confidence. Organized and participated in feature closure ceremonies, driving alignment between QA, development, and business teams.

Therapy brands (Ensora Health) – A2C and WebABA Application | Selenium (Java), BDD

- Developed and maintained **20+ automated** test cases using Selenium Java with BDD, improving automation reliability.
- Performed 30+ manual integration verifications to complement automation coverage, ensuring end-to-end validation.
- Investigated and reproduced production defects, assisting developers with root cause analysis and faster resolution. Logged, tracked, and retested defects using Jira.
- Identified objects using **multiple locators (XPath, CSS, ID)** and implemented dynamic element handling strategies.
- Collaborated with cross-functional teams during **Agile** ceremonies (sprint planning, daily scrums, retrospectives).
- Ensured compatibility testing across multiple browsers and environments.
- Worked extensively with **Git and Git Desktop** for version control and PR (Pull Request) workflows, enabling efficient collaboration and code reviews.
- Handled exceptions and debugging to ensure reliable and stable automation execution.

Education

Program	Institution	CGPA	Year
B.E. (Computer Science and Engineering)	Mangalore Institute of Technology, Moodbidri	9.1/10	2022

Achievements and Certifications

- Automated **600+ test cases** in 7 months, reducing manual effort by **40%** (Healthcare Suite).
- Awarded 2 **Team Kudos Awards** for automation and quality delivery.
- Recognized for **fast defect analysis**, reducing production bug turnaround time by 25%.
