MOHANA MURALI Y K

Senior Software Engineer

CAREER SUMMARY

Specialist Software Engineer / Backend Engineer with 8.5 years of combined experience (8 years in software engineering and 1 year of data science exposure), holding a Master's in Data Science & Management and a Bachelor's in Computer Science. Strong expertise in Java (11, 17/18, 21), Spring Boot, microservices, RESTful APIs, SQL, and enterprise databases including Teradata, Oracle, and Sybase. Experienced in backend system design, complex logic building, API-driven development, and data-intensive applications, with additional analytical and business understanding gained through data science exposure. Actively seeking Java and backend engineering roles.

WORK HISTORY

Senior Engineer, **11/2025 to Current**
Teradata - Remote

- Developed and monitored 3 API endpoints for model prediction.
- Developed SQL queries for target and feature building for a complex use case involving time series and cross-sectional data.
- Analyzed two endpoints and **added validation and logging** to maximize the use of the prediction service.

Specialist Software Engineer | Data Scientist, **03/2022 to 11/2025**
Societe Generale Global Solution Centre - Chennai

- Specialist Software Engineer with expertise in corporate financing using FINASTRA LOANIQ, managing funding monitoring, loan details, data reconciliation, and process automation.
- Worked in **Java 18 to Java 21 migration** for applications used for reconciliation like Duco and worked in Java and spring boot migrations for **5 applications**.
- Managed and monitored applications like change tracker, a central application, running in Java using stored procedure to pick up and process details for other reconciliation and funding applications.
- Spearheaded key projects, including improving funding monitoring performance, transitioning to a new business model, and migrating Oracle to Cloud, **earning a 'Spot award' for decommissioning a critical SQL component** impacting 13 applications.
- Developed a Non-Regression Robot in just 4 months, **reducing regression testing time by 90%, and integrated into CI/CD pipeline**.
- Developed a method to test and compare the API end point's response using JMeter for a set of inputs and trigger a comparison end point to compare the results and give the result in a text file.
- Refactored core application logic to **Domain-Driven, Hexagonal Architecture, creating domain entities, implementing business rules in domain layers,** and isolating infrastructure concerns.
- Worked as a part of converting legacy Java logic into maintainable, modular, testable domain-driven design, improving code maintainability, reducing regression risks, and enabling easier enhancements.

WEBSITES, PORTFOLIOS, PROFILES

- https://github.com/Mohan16071996/

TECHNICAL SKILLS/CERTIFICATION

PROGRAMMING LANGUAGE: Java, Python, Scala [Beginner]

COLLABORATION/IDE: IntelliJ, Eclipse, Git, Visual Studio Code, Jupyter Notebooks, Google Colab, R studio

DATABASE MANAGEMENT: MySQL, Oracle, Sybase, Teradata

FRAMEWORKS & TOOLS: Spring Boot, Hibernate, JPQL, Rest API, Spring Batch, JUnit, BDD, Cucumber, Test First Development, Hexagonal architecture, Spring Security

DEVOPS & DEPLOYMENT TOOLS: Jenkins, CI/CD, Artifactory, XL-Deploy, Docker

FRONTEND FRAMEWORKS: Angular [Beginner], Jasmine [Beginner]

MONITORING & LOGGING TOOLS: Elasticsearch, Grafana, Kibana, R Logger

TECHNICAL COURSES: Probability, Statistics, Linear Algebra, ML, AI, Algorithms, Data Structures, DBMS

- Core member of Late Booking project which aimed at **reducing liquidity buffer of 2M Euro annually**. Wrote core logic to classify late bookings on the application.
- Data Science experience in building MRM-approved econometric models (ARIMAX, ARDL) to forecast Net Banking Income (NBI) across multiple business units at Société Générale, supporting financial planning and budgeting exercises. Implemented model refresh cycles post-deployment and performed model monitoring and drift analysis using statistical tests.
- Developed API for models built using python/java, saving alerts, developing system for storing drifts and predictions, built dashboards, reducing the efforts of monitoring team by **30%**
- Played a pivotal role in classifying alerts in the central alert management system and presented innovative time series and classification models to predict late bookings, **winning a hackathon award**. Played a role in predicting **cost for each developer's commit**.

Software Engineer, **06/2017 to 03/2022**
BNP Paribas India Solutions Pvt Ltd - Chennai

- Worked with the Acquisition Team - Investments Performance Reporting to source market prices from multiple vendors and ensure data accuracy for performance reports (L1, L2, L3).
- Roles: **Developer, Configuration Manager - Managed software code, coordinated deployments**, and oversaw releases for over three years. Configuration Auditor - **Auditing SCM practices as per company QA norms.**
- Contributed to major projects including SVN to GIT migration and Unix to Linux migration. **Received 'Spot Award' and 'Quarterly Award'**

EDUCATION

M.S, **Data Science & Management**, **07/2024**
IIT Indore & IIM Indore - Indore
GPA: 3.53/4.33

B.E, **Computer Science**, **05/2017**
Anna University - Chennai
GPA: 8.13/10

ACADEMIC, CO-CURRICULAR & SPORTS ACTIVITIES

- **Winner for Best Idea in Hackathon** under Data Driven Innovation, Société Generale, Chennai 2024
- Presented a paper in International Conference, Chennai 2017
- Represented **DHARAN-CC and SIVAJI-CC in intra-district level cricket** tournaments.
- Won multiple "Best Bowler" awards, with performances featured in *The Hindu* newspaper.

MANAGERIAL COURSES: Operations Management, Supply Chain, Managerial Economics, Financial Management, Managerial Accounting [Basics], Theory of Constraints, Linear and Convex Optimization
