SWAROOP R

Associate Consultant, Engineering

Phone: +91 8123765776

Email: rswaroop.sse@gmail.com

LinkedIn: linkedin.com/in/swaroop-raj/

Senior Software Engineer adept at leveraging new technologies, effectively collaborating within teams and seeking challenging opportunities to drive impactful projects. Experienced in AI/ML, Full-Stack development, FinTech and building scalable microservices.

RELEVANT SKILLS

• GO (Golang) • React.JS • Python • Java • JS • AWS • GCP • Azure • TS • REST • gRPC • MySQL • MongoDB • JQL • AI/ML • GenAI • Agentic AI • Kubernetes • Docker • HTML • CSS • Django • PHP • XML • Spring Boot • Redis • Protobuf • Microservices • Beego • Node.js • Android Studio • CloudFront • Linux • Kafka • Helm • Terraform • Grafana • Git

PROFESSIONAL EXPERIENCE

GlobalLogic, Bengaluru *11/2024–Present*

Associate Consultant, Engineering - AI/ML

- Led full-stack development and cross-cloud deployment of Cloudera-AI (CAI/CML) on GCP, AWS and Azure, delivering a secure, scalable ML platform used by 500+ data scientists.
- Built core platform modules including MCP Server with Apache Iceberg for Impala, enabling scalable data access layers for AI copilots and enterprise ML workloads.
- Implemented high performance backend and model-serving infrastructure in Go, using gRPC/protobuf APIs for low latency inference, request batching, Redis caching and GPU aware scheduling. Docker & Helm for reproducible packaging and releases and Kubernetes (kubectl / k9s) for orchestration and live troubleshooting enabling safe canary rollouts and autoscaling of model services.
- Engineered scalable ML microservices and APIs for automated model training, versioning and deployment; implemented dynamic autoscaling in CAI to optimize resource utilization and cost by allowing compute resources to scale based on workload demands.
- Implemented Kubernetes based orchestration and fault-tolerant infrastructure for containerised ML applications, achieving 99.99% uptime SLAs on GCP.
- Developed React.js configuration UIs for AI Workbench (CPU/GPU allocation, autoscaling, load balancer, access controls) and integrated them with backend autoscaling infrastructure for improved operational efficiency.
- Designed and implemented model governance, lineage, monitoring and compliance features to ensure model/data traceability and operational observability.
- Integrated CAI with native cloud services (BigQuery, Vertex AI, Cloud Storage, IAM) to enable hybrid/multi-cloud workflows and improve cloud-native compatibility.
- Collaborated with product, data engineering and architecture teams to define roadmap features (AI assistants for SQL/BI, open-source model support) & delivered 40+ customer prototypes, including FedRAMP healthcare demos.

KreditBee, Bengaluru *11/2021 - 11/2024*

Senior Software Engineer - Full Stack

- Took end-to-end ownership of the payment gateway model at Kreditbee, one of India's leading FinTech startups.
- Developed and maintained highly concurrent microservices for a scalable payments system using GO, ensuring high availability and reliability to efficiently handle thousands of simultaneous requests.
- Designed and implemented custom APIs and payment processing modules to facilitate secure and efficient transactions, utilising technologies such as Golang, Python and RESTful APIs.
- Understood requirements from product, led tech discussions, designed and implemented solutions utilized by approximately 12,000 Daily Active Users.

- Developed full stack m2p credit card integration, open banking API payment solution for our product that allows the user to create, view and transact on m2p card from our app.
- Provided mentorship to peers, optimising solutions, removing obstacles and fostering a culture of producing clean and high-quality code which eventually led to minimal or zero P0s.
- Recipient of the organization's highest recognition award and acknowledged twice for outstanding performance.

Temenos, Bengaluru *06/2021– 11/2021*
Senior Software Engineer

- Engineered and incorporated new APIs in Java and JDBC, emphasising efficiency by optimising code time complexity. Facilitated the deployment of a full-stack feature within a remarkable 2-week timeframe.
- Worked on the leading core banking software - T24 transact. Architected and integrated Java EE components leveraging Spring MVC, significantly enhancing system scalability and performance; developed microservices using Spring Boot and Hibernate.

Temenos, Bengaluru *07/2019– 06/2021*
Software Engineer

- Contributed software engineering expertise in the development of products through SDLC, from requirements definition through successful deployment. Designed and implemented CI/CD pipelines.
- Built Enquiries, overview screens and drill-down UI structures for the front end as per the client requirement. Unit test, Debug the code, deliver the data records and APIs on time.

Enmorche, Bengaluru *01/2019– 05/2019*
Freelance Web Developer

- Built an e-commerce website from scratch and hosted online.
- Collaborated directly with clients, understanding their requirements, generating user stories and overseeing the end-to-end development and delivery of the final product.

KEKKAR InfoTech and Services, Bengaluru *07/2018– 09/2018*
Android Developer Intern

- Created custom mobile applications using native technologies as per client specifications.
- Implemented JAVA based Android SDK for Image and data processing via activities, Intent/Services, Content Providers. UI design using XML, custom android views/widgets.

Skribe, New Delhi *03/2018– 05/2018*
Summer Intern

- Built web crawlers for 34 national news websites like Times of India, Indian Express, The Hindu.
- News article extraction using python libraries such as Beautiful Soup, Numpy and Regular Expressions.
- Selection algorithms coded to retrieve and parse only the required data from the websites.

PROJECTS

Cloudera - AI (CAI/CML)

GenAI, Agentic AI, Golang, React.JS, TS, gRPC, GCP, AWS, Azure, Kubernetes, Docker, MongoDB, Grafana, Swagger, Protobuf, Linux

- Contributed to the development of Cloudera's enterprise-grade AI platform, enabling secure and scalable model training, inference and lifecycle orchestration across hybrid and multi-cloud environments.
- Developed full-stack features with Go, ReactJS, TypeScript/TSX and integrated them with Helm, Docker, gRPC, Kubernetes, improving deployment automation, observability (Grafana, Prometheus) and CI/CD workflows.
- Delivered 40+ customer-ready AI prototype solutions, accelerating adoption across finance, healthcare, public sector (including FedRAMP healthcare demos).
- Built core backend components in Go using Apache Iceberg, Impala, Kubernetes, powering AI copilots and large-scale ML workloads.

- Implemented governance and monitoring for ML workloads using OpenTelemetry, feature flags, automated rollbacks, model/version tracking, ensuring reliability and compliance.

Unified Payments Interface (UPI)

Golang, ReactJS, AWS, MySQL, Redis, REST, Docker, ELK

- Successfully launched a UPI payment system that processed 200,000 transactions per day with a 95% success rate. Developed RESTful and gRPC APIs to handle end-to-end UPI payment processing across various channels, supporting functionalities such as UPI mandates and transaction authentication..
- Ensured high availability and fault tolerance by designing microservices that can handle millions of transactions per day, ensuring zero downtime for the UPI system.

24K Digital Gold

React.JS, Flutter, TS, CSS, Golang, AWS, REST, MySQL

- Designed and developed full stack digital gold integration to our application that allows to establish a user behaviour of investing in 24k Gold on our app platform. Built new front-end components for customer facing app pages where users can buy, view or sell gold.
- Responsible for developing UI layouts and creating custom views/widgets. Built new front-end components in ReactJS using Boilerplate for the customer-facing app page. My responsibilities extended to API design and backend integration to ensure optimal functionality.

PhonePe Payment Gateway Integration

Golang, REST API, AWS, Redis, MySQL, Kubernetes, Docker

- Developed a seamless integration of the PhonePe Payment Gateway into the KreditBee app facilitating all payment transactions. Worked on S2S integration, writing new APIs, encryption algorithms fostering secure communication.
- Set up and manage Kubernetes clusters on AWS to deploy and scale applications, including configuring pods, deployments, services, ingress and config maps. Managed scalable microservices using Docker for containerization.

NACH Auto Debit Mandates

Golang, REST, AWS, MySQL, React.JS, Firebase

- Spearheaded the development of the NACH Auto Debit Mandates feature, crafting a seamless solution for creating UPI mandates on behalf of customers.
- Engineered robust APIs using Golang to enable the creation and management of UPI mandates for customers. Leveraged AWS services, including Lambda functions, API Gateway and DynamoDB, to support the scalability and reliability requirements of the feature.

M2P Card Integration

Golang, React.JS, REST, AWS, MySQL

- Developed full-stack m2p credit card integration for our product using ReactJS, Golang, SQL, AWS Lambda, EC2, CloudWatch, Athena, S3, SNS, SQS, REST/HTTP API that allows the user to create m2p card, view card, transact on card and perform various actions on card.
- Handled event triggers through Webhooks and APIs. Handling API requests and responses.

EDUCATION

Sir M Visvesvaraya Institute of Technology, Bengaluru (Affiliated to VTU)

B.E - Computer Science *08/2015– 07/2019*

FIRST CLASS DISTINCTION

CGPA: 8.7
