MANIKANTA DIRISALA

Email: manikanta.dirisala45@gmail.com | **Phone:** +91-9392777549 | Address: Bangalore, India

Summary:

- Having 4+ Years of IT experience in **AWS & DevOps Engineer** and Well-versed with Amazon Web Services
  (AWS) provisioning and good knowledge of DevOps & AWS services like **EC2**, **Elastic Loadbalancers**, **S3**,
  CloudFront, **RDS**, **VPC**, **Route53**, **Cloudwatch**, **CloudFormation**, **IAM**, **Autoscaling Group**, **Code pipeline**, **ECS**, **Lambda**, **API Gateway**, **SNS**, **Certificate Manager**, **Git**, **Jenkins**, **Maven**, **Docker**, **CircleCI**, **Serverless**, **ELK**.
- Creating Snapshots and Amazon machine images (**AMIs**) of the instances for backup and creating clone instances.
- Experience in providing operations and maintenance support for AWS cloud resources such as launching, maintaining, and troubleshooting **EC2** instances, Virtual Private Clouds (**VPC**), Elastic Block store (**EBS**), **ELB**, **ECS**, **Cloud Watch**, and **IAM**.
- Utilized Cloud Watch to monitor resources such as **EC2**, Amazon **RDS** services to set alarms for notification or automated actions.
- Defined AWS **Security Groups** which acted as virtual firewalls that controlled the traffic allowed reaching one or more AWS EC2 instances.
- Configured **NACL's**
- Good Experience in Server Configurations and Installations and Modifications.
- Automated the creation of Amazon Machine Images (AMIs) using **shell scripts**.
- Hands on Experience on Container Orchestration Service like **ECS**.
- Hands on experience on implementing Service Discovery using scalable DNS service like **Route53**.
- Creating **S3** buckets and also managing policies for S3 buckets and Utilized S3 bucket and Glacier for storage and backup on AWS.
- Responsible for managing the **Docker private registry**.
- Experience in Containerization tools like **Docker**.
- Hands-on experience in writing **Docker files** for building images.
- Experience in defining and running multi-container docker applications using **docker-compose**.
- Experience in branching, tagging and maintaining the version across the environments working on Software Configuration Management (SCM) tools like **GIT**.
- Installed and maintained the **GIT repositories**.
- Trained development teams on GIT usage and best practices.
- Administering **Jenkins** and securing **Jenkins** with role based access controls and matrix based project access.
- Involved in Installing Jenkins on a Linux machine and created a master and slave configuration to implement multiple parallel builds through a build farm.
- Hands on experience on installation of Static Code Analysis tool **SonarQube** and Integrated in **Jenkins Pipeline**.
- Responsible for creating and developing the **Jenkins Scripted Pipelines** for **Container based applications** using **Groovy Script**.

- Experienced with Docker container service. Dockized applications by creating Docker images from Docker file. Experience in maintaining and executing build scripts to automate development and production builds.
- Hands-on working highly available and scalable **Production** and **non-production environment**.
- Installed and Configured the monitor tools like **ELK** to monitor the **Application Performance**, **Infrastructure.**
- Hands-on experience on developing the **Python lambda functions** using **Serverless Framework** and **SAM.**
- Responsible for monitoring the entire infrastructure and Microservices applications using **ELK**.
- Good Knowledge on Configuration management tools like **Ansible**.
- Good communication skills, possess a good work **attitude**, **flexibility** and **ability to learn and work independently**.
- Possess good understanding of the principles and best practices of Software Configuration Management (SCM) in **Agile methodologies**.
- Automating the infrastructure creation using **Terraform**.
- Hands-on experience on executing the python scripts using **Terraform**.
- Designed, built, and automated new solutions centered on the **Kubernetes** container orchestration platform and its ecosystem of projects.
- Hands-on experience in Azure Cloud Services (PaaS & IaaS), Storage, Web Apps, Active Directory, Azure Container Service, VPN Gateway,Traffic Manager, Azure Monitoring, Key Vault, and SQL Azure.

EDUCATION:

- **MBA** from CSN PG and Degree College,Bhimavaram in 2016.

TECHNICAL SKILLS:

Technologies	Skills
Cloud Computing	AWS
Scripting	Shell Scripting, Groovy, Python
Containerization Tool	Kubernetes
SCM	Git, Github
CI/CD Tool	Jenkins
Monitoring Tools	ELK, Grafana
Operating Systems	Ubuntu, Linux
Web Server	Apache2

Ticketing Tools	Gitlab
Container Orchestration Tool	Elastic Container Service(ECS)
Infrastructure as a Code	Cloudformation, Terraform
Static Code Analysis	SonarQube
Build Tools	NPM, Maven
Configuration Management Tool	Ansible
Language	JSON, YAML

PROFESSIONAL EXPERIENCE: -

! Aziro Technologies (Msys) – Bangalore Senior Software Engineer, Oct 2022 - Sept 2025.

Current Project: TechAccelerator

Project Description:

TechAccelerator is a cutting-edge SaaS platform and professional services company designed to accelerate revenue opportunities for our technology clients. Focus on your core competencies, and let us create solution environments that will drive more leads and more sales. Faster.

Technical Summary: VMware, kubernetes, windows and basic of powershell scripting.

- Experienced on creating the labs and blueprints as per client requirements and presentation.
- Deploy the blueprints and launching the labs for creating the infrastructure.
- Troubleshooting the issue on building the blueprints and taking the client inputs for solving the issues.
- Automated the minor functionalities using the shell and powershell scripts.
- Experience on testing the blueprint functionality and promoted it into VM template.
- Creating the virtual machines using story guidelines and testing the VM's on Vcenters.
- Validating the different clients customer stories on blueprints and labs and updating to client within timeline.
- Experience on Gitlab issues and understanding the Gitlab features and functionalities.
- Implemented Docker automation solution for Continuous Integration/Continuous Delivery model. Managed Docker orchestration and Docker containerization using Kubernetes.
- Worked on Deployment Automation of all microservices to pull the image from Private Docker registry and deploy to Kubernetes Cluster.
- Created, managed and performed container-based deployments using Docker images containing Middleware and Applications together and Evaluated Kubernetes for Docker container orchestration.
- Utilized Kubernetes for the runtime environment of the CI/CD system to build, test deploy.

•

! Msys Technologies Pvt Ltd - Bangalore Senior Software Engineer, Nov 2021 – Sep 2022 **.**
Project: AERA Technology

Project Description:

Aera Technology is the Decision Intelligence company that makes business agility happen. Our innovative cloud platform integrates with your existing systems to digitize, augment, and automate decision making in real time. In the era of digital acceleration, Aera helps enterprises around the world transform how they respond to the ever changing environment.

Technical Summary: GitHub, Jenkins, Terraform and AWS

- Experienced in Continuous, Integration using Jenkins server for end to end automation builds and deployments.
- Experienced in build tools such as Apache Ant, Maven, Jenkins.
- Experience with CI (Continuous Integration) and CD (Continuous Deployment) methodologies with Jenkins.
- Managing all phases of build and release activities, dependency management and deployment strategy.
- Configured and Administered Nexus Repository Manager for GIT repositories and builds.
- Creating the IAM policies and import the IAM policies using with Terraform code.
- Experience in Implementing Organization DevOps strategy in various environment of Linux and windows servers along with adopting cloud strategies based on AWS.
- Creating the S3 bucket in AWS console and attached with IAM policies using with terraform code.
- Creating the AMI images in Jenkins job with Terraform Code.
- Source Code Control & Repository Administration with merging and branching to develop new features in the existing code using GIT.
- Git Secrets stored in Jenkins job using with GPG keys
- Creation of EC2 instances from AWS console in multiple regions.
- Working on AWS Auto Scaling for providing high availability of applications and EC2 instances based on the load for applications by using Cloud Watch in AWS.
- Managing the infrastructure of applications on AWS.
