EDUCATION

Coimbatore Institute of Technology — Coimbatore, India
B.Tech Information Technology; First Class — **Aug 2018 - Apr 2022**
Malar Higher Secondary School — Namakkal, India
HSLC (Bio-Maths) – 94.25% — **Jun 2016 – Apr 2018**

SKILLS SUMMARY

- **Languages**: Python, JavaScript, TypeScript, Shell scripting
- **Databases**: PostgreSQL, MongoDB
- **Frameworks / Libraries** FastAPI, Flask, React, Express, Pandas, NumPy, Pytest
- **Backend Practices** RestAPI, Microservices, Serverless, Test Driven Development, Agile methodologies
- **Cloud Platforms** AWS, Google Cloud, Firebase
- **Cloud Technologies:** AWS, EC2, S3, IAM, Lambda, API Gateway, CloudFront, CloudWatch
- **CI/CD**: Git, RHEL, Gitlab, Jira, Jenkins, Terraform, Docker, ArgoCD, AWS Developer Tools
- **Observability & Monitoring:** Elasticsearch, Logstash, Kibana, Filebeat, Elastic Agent, Grafana, Logging, L3 Production Support

TOTAL WORK EXPERIENCE – 4 Years

Senior Associate II, Software Engineering – Development | Kyndryl — **June 2022 - Present**
Client: ESAF Small Finance Bank (2025 – Present)

- Designed and implemented a centralized observability platform using the ELK Stack (Elasticsearch, Logstash, Kibana) to monitor application logs, transactions, and system metrics across multiple banking services.
- Built and optimized Logstash pipelines for structured log ingestion and transformation, improving log searchability and reducing incident investigation time by ~30%.
- Developed Kibana dashboards to track service health, error rates, and performance trends, enabling proactive monitoring and faster detection of production issues.

Client: USDC Global (2023 – 2025)

- Developed and maintained Python-based backend services and REST APIs using Flask/FastAPI and SQL to support loan management workflows and MIS reporting dashboards.
- Automated bulk onboarding, data validation, and processing workflows using Python, Pandas, and SQL, reducing manual operational effort by approximately 80–90% and improving data accuracy.
- Implemented serverless automation using AWS Lambda integrated with S3, IAM, Cognito, and CloudWatch, enabling scalable user onboarding and internal operational tools.
- Built internal Python utilities such as password reset automation and operational report generators, reducing support turnaround time and dependency on manual interventions.
- Acted as an L3 production support engineer, performing root-cause analysis by correlating application logs, metrics, and database data, and coordinating hotfix deployments to maintain SLA/SLO compliance.

Client: DodoSkills Pvt Ltd (2022 – 2023)

- Built Python utilities to fetch, parse, and analyze application logs from AWS EC2 instances, improving debugging efficiency and reducing log analysis turnaround time.
- Automated CI/CD workflows using shell scripting and Jenkins, reducing build and release time from approximately 50 minutes to under 10 minutes and improving developer productivity.
- Designed and implemented serverless email communication workflows using AWS Lambda, Python, and API Gateway, enabling reliable, low-maintenance notification delivery.
- Monitored and resolved production issues by analyzing AWS CloudWatch logs and system-level metrics in both EC2 and serverless environments.

CERTIFICATES

AWS Cerified Cloud Practitioner — **2022-2028**
AWS Cloudquest Solutions Architect Badge — **March 2023**
Meta Advanced React Certification — **April 2024**

PROJECTS

Personal Portfolio Website | React, AWS CloudFront
Deployed on AWS | Global CDN

- Designed and developed a responsive personal portfolio website to showcase projects, skills, and experience using React.
- Deployed the application using AWS CloudFront to enable global content delivery and low-latency access.

○ Improved page load performance and availability through CDN caching and optimized static asset delivery.
○ Implemented a clean, modular UI to ensure scalability and ease of future enhancements.

Task Disposer Application | React, AWS Amplify
Productivity Web Application
○ Built a lightweight task management web application using React to help users organize and track daily tasks.
○ Deployed the application on AWS Amplify with integrated CI/CD, enabling automated builds and seamless deployments.
○ Implemented CRUD functionality and state management to ensure smooth user interaction and data consistency.
○ Reduced deployment effort and release time by leveraging Amplify's managed hosting and pipeline features.

Chronic Kidney Disease Analysis | Flask, Machine Learning
Predictive Analytics Application
○ Developed a Flask-based machine learning application to predict the likelihood of chronic kidney disease using patient health data.
○ Applied data preprocessing techniques including handling missing values, feature scaling, and exploratory data analysis to improve data quality.
○ Trained and evaluated a Linear Regression model to identify key health indicators influencing disease prediction.
○ Built a REST-based interface to serve predictions, enabling easy integration and testing of the model outputs.
