JOB OBJECTIVE

Pursuing opportunities as an SDET (Software Development Engineer in Test) to leverage **over 3 years** of hands-on experience in automation framework design, API-first testing, and CI/CD-integrated quality engineering, contributing to the development of scalable, reliable, and high-quality software products through automation-first and engineering-driven testing practices.

CORE COMPETENCIES

- Test Automation Framework Architecture
- API Automation & Contract Testing
- UI Automation
- End-to-End & Integration Testing
- CI/CD Pipeline Integration
- Test Strategy & Automation Planning
- Intelligent Test Execution & Parallelization
- Flaky Test Analysis & Reliability Engineering
- Performance & Load Testing
- Production Monitoring & Defect Root Cause Analysis
- AI-Assisted Test Generation & Automation Optimization
- Test Data Management & Environment Handling
- Agile/ Scrum Quality Ownership
- Code Reviews & Engineering Collaboration
- Quality Metrics, Reporting & Test Governance
- Software Testing Life Cycle
- Cross-Functional Team Collaboration

SOFT SKILLS

- Automation-First Mindset
- Quality Advocate
- Analytical Problem-Solver
- Innovative Thinker
- Collaborative Team Player
- Adaptable Learner
- Mentor & Knowledge Sharer
- Result-Oriented Performer

EDUCATION

- **Bachelor of Technology (B.Tech.) in Mechanical Engineering**
  Ashokrao Mane Group of Institutions, Vathar | 2022
- **Diploma in Mechanical Engineering**
  Ashokrao Mane Polytechnic, Vathar | 2019

PROFILE SUMMARY

- **Focused SDET / QA Automation Engineer** with wealth of experience in building scalable, production-grade automation frameworks for **API**, **UI**, and end-to-end testing in product-driven organizations.
- Currently **Software Engineer II** at **Solera**, contributing to **automation framework development**, managing **CI/CD quality gates**, and supporting cross-team quality initiatives.
- Proficient in **Java-based automation**, designing frameworks, and embedding quality early in **SDLC**.
- Skilled in **API automation** with **REST Assured** and **UI automation** using **Selenium**, optimizing test development through **reusable components**.
- Experienced in integrating automation into **CI/CD pipelines** (**GitLab CI**, **GitHub Actions**), enabling parallel execution and intelligent test selection to improve **regression efficiency** and accelerate **releases**.
- Strong background in production **reliability engineering**, including eliminating **flaky tests**, performing **root cause analysis**, and optimizing **API performance**.
- Innovator in **AI-assisted test generation** and automated **API documentation**, improving test coverage and reducing manual documentation efforts.
- Proven skills in architecting **automation frameworks** and developing **API-first test strategies**, while collaborating with Developers and **DevOps Teams** to promote modern **quality engineering practices**.

TECHNICAL SKILLS

- **Test Automation & Frameworks:** Java, Selenium WebDriver, TestNG, REST Assured, E2E Automation, UI Automation, Smoke & Regression Testing, Performance Testing (JMeter)
- **API & Functional Testing:** API Testing, End-to-End Testing, UI Validation, Integration Testing, Regression Automation, Service-Level Testing
- **CI/CD & DevOps:** GitLab CI, GitHub Actions, Docker, Gradle, Parallel Test Execution, Intelligent Test Selection
- **Tools & Platforms:** TestRail, Postman, Datadog, Lenses, MySQL, Git, Sauce Labs, Zeplin

WORK EXPERIENCE

Sep'22 – Present | Software Engineer II | Solera, Remote

Growth Path:
Associate Software Engineer (Sep'22 – Dec'24) → Software Engineer II (Dec'24 – Present)

As **Software Engineer II:**
Key Result Areas:

- Executing cross-browser automation to validate critical UI flows across Chrome, Firefox, and Edge.
- Designing reusable, data-driven test scripts to validate multiple input scenarios, enhancing coverage and minimizing manual effort.
- Optimizing regression suites by categorizing tests into critical and non-critical flows, reducing execution time.
- Establishing systematic defect tracking and prioritization workflow, improving bug resolution efficiency and developer collaboration.
- Authoring detailed framework and automation documentation, enabling faster onboarding and promoting team-wide standardization.

Highlights:

- Engineered a modular, scalable REST Assured API framework from the ground up, enhancing maintainability and boosting test coverage.
- Transitioned **4** projects to WebDriverManager, streamlining setup processes and reducing onboarding time for new QA engineers by **40%**.
- Standardized Gradle-based test modules across **8** automation projects, promoting code reuse and improving team velocity by **35%**.
- Orchestrated end-to-end automation pipelines with parallel execution, reducing regression cycle time and accelerating release readiness.
- Automated TestRail reporting to deliver real-time results and ensure **100%** traceability for stakeholders.
- Implemented intelligent test triggers that execute only affected module tests, cutting CI runtime by **50%**.

ACHIEVEMENTS

- **Framework Architecture:** Designed and implemented scalable automation frameworks from scratch, cutting test development time by **60%** and ensuring **85% API test coverage**.
- **Quality Champion:** Acted as a quality champion within the sprint team, mentoring peers on automation approaches and driving a shift from manual validation to an automation-first testing mindset.
- **Risk-Based Test Strategy:** Defined and implemented a risk-based automation strategy focusing on critical business workflow, enabling earlier defect detection and improving release confidence.
- **Automation Standards Ownership:** Established automation coding standards and best practices across projects, improving framework maintainability and reducing pull request review cycles.
- **Shift-Left Quality Enablement:** Collaborated with developers during design and implementation phases to improve testability, accelerating automation adoption and reducing downstream defects.

- Diagnosed and remediated **20+** production test failures, resolving **15+** flaky E2E tests and improving test reliability from **65% to 85%**.
- Conducted performance testing on TRS service APIs, uncovering **3** critical bottlenecks and improving response times by **40%**.
- Supported the enhancement of Cypress reporting with detailed metrics and failure screenshots, reducing debugging efforts by **50%**.
- Pioneered AI-assisted testing workflow to auto-generate test cases and API documentation, accelerating coverage by **30%** in Q4 2024.
- Developed automated API endpoint documentation from Copilot specifications, decreasing manual documentation effort by **80%**.
- Facilitated sprint QA ceremonies including retrospectives and demos; performed **50+** code reviews to ensure high-quality standards.
- Resolved critical infrastructure blockers with Sauce Labs and TestRail integrations, unblocking **2** major release cycles.
- Strengthened code quality by implementing automated static code analysis and linting in pipelines, reducing critical defects in production.
- Secured sensitive credentials by migrating all into environment variables into the system.

As **Associate Software Engineer:**
Key Result Areas:

- Developed automation scripts using Java, Selenium WebDriver, TestNG, and REST Assured, improving test coverage and efficiency.
- Integrated automated tests into CI/CD pipelines with GitLab CI and GitHub Actions, reducing regression cycles.
- Executed functional, regression, and smoke tests while identifying and documenting defects, enhancing overall product quality.
- Maintained test frameworks and mentored junior QA engineers, improving team productivity and onboarding efficiency.
