Apurva Shekhar

Software Engineer (Frontend) | 3 YOE | React.js • Express.js | Fintech • Edtech Data-Intensive Applications

Summary

Software Developer with 3 years of experience specializing in **frontend development**. Experience in building high-performance, data-intensive **React.js** applications, and optimizing app performance with intuitive UI. Deep expertise in **fintech/edtech** applications, and real-time data visualization (**WebSockets**), with backend proficiency in Django and Express.js.

Technical Skills

FrontEnd: ReactJs, React Native, Redux Toolkit, HTML, CSS/SCSS/SASS, MUI, Web Workers, Jinja/EJS templating, Tailwind
BackEnd: NodeJs, ExpressJs, SQL, Django, REST APIs
General Programming: Data Structures and algorithms (DSA), System Designs, Javascript, Typescript, Python, Microservices, Caching, Multithreading, Git version control, Agentic AI, Copilot

Experience

Software Engineer, ***Trendlyne Technologies*** **Apr 2024 - Present**

- Worked since **inception to deployment** of SmartOptions(FnO App), involved with web and native app development.
- Rendering high-frequency trading data; optimized React components using **memoization**, **Debouncing**, **Throttling** and **Virtualized Rendering**.
- Reducing unnecessary renders by over **30-40%** by efficient state management architectures.
- Achieved sub 200ms **INP** under by employing **WebWorkers** for multi-threading for heavy data processing.
- Implemented **WebSockets** for real-time market updates, ensuring zero latency in data reflection on the UI.
- Developed and integrated **webviews** for over 20% component reusability across platforms.
- Engineered **SEO-friendly** dynamic pages by integrating Jinja templating along with React, significantly improving the Lighthouse **SEO** score and **indexability.**
- Achieved sub 200kb **main bundle** size and sub 500kb vendor bundle size for fast **LCP**, using **webpack** config, **dynamic/lazy loading** and **code splitting**.

Associate Software Engineer, ***Cognitive Clouds*** **Feb 2023 - Apr 2024**

- Built pixel-perfect, 100% **responsive** UI with search and filtering feature with **debouncing** for optimization.
- Decreased server load by optimizing **API consumption** strategies, and used **sprites** and **CDN** for asset loading, reducing page load time.
- Achieved **90%+ test coverage** in unit testing using **Jest** and **React Testing Library** (RTL).
- Developed a Admin Dashboard using React and Express, to manage LMS content effectively.
- Engineered fullstack mentorship solution for a client, with ticketing system and on request meet scheduling.
- Used Figma and zeplin to manage and collaborate on designs for components with international teams.

Projects

PreptorAI: Developing an AI-powered personalised UPSC preparation app

- Developed a **full-featured test-taking engine** for UPSC preparation with automatic topic based test generation with real-time answer synchronization and auto-save functionality.
- Integrated **Highcharts-powered analytics** to render complex performance data—including accuracy heatmaps, topic-wise breakdowns, PYQ analysis, and comparative peer metrics.
- Achieved **sub-2s initial load times** through **code splitting**, **lazy loading**, and **optimistic UI** patterns, ensuring accessibility for users on 2G/3G networks and budget devices.

Full Stack E-commerce

- Developed a responsive shopping interface with complex state management for Cart and Checkout flows using Redux.
- Implemented client-side filtering and **debounced search** for instant product discovery.

Education

Bachelor of Engineering in Electronics and Communication Engineering **2014 - 2018**

Dayananda Sagar College of Engineering (VTU), Bangalore
