A Kumar Singh

Bengaluru, Karnataka, India aksjavacloudtech@gmail.com 8922838598 in/arvind-kumar-singh-java

PROFESSIONAL SUMMARY

A Software Engineer with over 6.8 + years of experience in designing, developing, and deploying web-based applications. Highly proficient in building cloud-native microservices and distributed systems using Java, Spring Boot, and AWS. Experienced in high-level and low-level design, event-driven architecture, and real-time data processing using Kafka. Adept at delivering scalable, resilient, and efficient software solutions in fast-paced, high-demand environments. Seeking to contribute to a dynamic, growth-oriented organization by leveraging strong technical and problem-solving skills..

KEY SKILLS

- Expertise in Object-Oriented Programming **(OOP)** concepts.
- Design and development of cloud-native microservices using **Java, Spring Boot,** and **Spring Cloud.**
- Proficient in various open-source frameworks such as **Spring MVC, Spring Boot, Spring Data JPA, Hibernate.**
- Experience in building **Docker images** and **deploying** code on **AWS**.
- Hands-on experience with **AWS services** such as **EC2, S3 Bucket, CloudFront, Load Balancer, Redis Cache, DynamoDB, and IAM.**
- **CI/CD** integration using **Jenkins and GitLab.**
- Knowledge of **ELK** stack, **Spring Cloud Gateway API**, and serverless architecture with **AWS Lambda** and **API Gateway.**
- Proficiency with databases including **RDS**, **Aurora DB, MySQL**, **Oracle**, **DynamoDB**, and **Redis Cache**.
- Strong experience in developing web-based applications using **Restful Web Services**, **Spring MVC**, and integrating **Spring with Hibernate**.
- Knowledge of **Spring AOP, Spring Annotations,** and caching mechanisms.
- Familiarity with design patterns such as **Singleton, Factory, Strategy, and Observer.**
- Strong experience in designing and implementing **distributed systems**, with a focus on **high-level and low-level system design**.
  - Experience working with **Kafka** for real-time data streaming and event-driven architectures.
  - Hands-on experience with **MongoDB** for NoSQL data storage and retrieval.

TECHNICAL SKILLS

- **Languages:** Java 1.7, Java 1.8, Java 17
- **Frameworks**: Spring (Core, MVC, Boot, Microservices), Hibernate/JPA
- **CI/CD Tools:** Jenkins, GitLab
- **Containerization:** Docker
- **Web Services:** REST, Spring REST
- **Cloud**: AWS (EC2, S3, Lambda, SQS, IAM, CloudFront, Load Balancer), Spring Cloud Gateway API
- **Event Streaming**: Apache Kafka – for real-time data streaming and event-driven architectures
- **Architecture & Design:** High-Level Design (HLD), Low-Level Design (LLD), Microservices Architecture, Distributed Systems
- **Databases**: Oracle, MySQL, DynamoDB, Redis Cache, Aurora, MongoDB
- **Design Patterns:** Singleton, Factory, Strategy, Observer
- **Version Control:** • **Languages:** Java 1.7, Java 1.8, Java 17
  - **Frameworks:** Spring (Core, MVC, Boot, Microservices), Hibernate/JPA
  - **CI/CD Tools:** Jenkins, GitLab
  - **Containerization:** Docker
  - **Web Services:** REST, Spring REST
  - **Cloud:** AWS (EC2, S3, Lambda, SQS, IAM, CloudFront, Load Balancer), Spring Cloud Gateway API

• **Event Streaming: Apache Kafka** – for real-time data streaming and event-driven architectures
• **Architecture & Design:** High-Level Design (HLD), Low-Level Design (LLD), Microservices Architecture, Distributed Systems
• **Databases:** Oracle, MySQL, DynamoDB, Redis Cache, Aurora, MongoDB
• **Design Patterns:** Singleton, Factory, Strategy, Observer
• **Version Control:** Git, SVN
• **Development Environments:** Eclipse, IntelliJ, SQL Developer, Spring Tool Suite (STS)
• **Build Tools:** Maven
• **Platforms:** Windows, Linux, macOS
• **Servers:** Apache Tomcat
• **Ticketing & Collaboration:** Jira (with Confluence)
• **Log & Monitoring Tools:** ELK Stack (Elasticsearch, Logstash, Kibana), Sumo Logic, Splunk, SignalFx
• **Tools & Technologies: Apache Kafka**, Docker, Jenkins, GitLab, AWS Services

- **Development Environments**: Eclipse, IntelliJ, SQL Developer, Spring Tool Suite **(STS)**
- **Build Tools:** Maven,Gradle
- **Platforms:** Windows, Linux, macOS
- **Servers:** Apache Tomcat
- **Ticketing & Collaboration:** Jira (with Confluence)

- **Log & Monitoring Tools:** ELK Stack (Elasticsearch, Logstash, Kibana), Sumo Logic, Splunk, SignalFx
- **Tools & Technologies:** Apache Kafka, Docker, Jenkins, GitLab, AWS Services

PROFESSIONAL EXPERIENCE

NIKE – Senior Software Engineer

February 2025 – Present

Project : Order Finance

Tech Stack: Java 17, Spring Boot 3, Microservices, REST, JPA, Spring Cloud Gateway, Docker, GitLab, AWS (EC2, S3, RDS, SQS, IAM), **Kafka**, **Distributed Architecture**, **HLD**, **LLD**

Currently contributing to the **Order Financial Team at NIKE**, where I am responsible for the **design (HLD & LLD), development, maintenance, and optimization** of critical backend services, specifically **Order Payment Services** and **Order Tax Services**. My role involves working on a **distributed microservices architecture**, managing the **entire payment lifecycle—including authorization, capture, refund, and settlement**—across multiple geographies, ensuring seamless, accurate, and secure financial transactions.

This project plays a pivotal role in ensuring **financial accuracy**, **regulatory compliance**, and **exceptional customer experience** within Nike's global commerce ecosystem.

• Developed and maintained Order Payment and Tax Services handling global e-commerce payments
• Managed full payment lifecycle including authorization, capture, refund, and settlement
• Integrated with **Apache Kafka** to enable real-time, event-driven communication between distributed services
• Designed and implemented **high-level and low-level architecture** to ensure scalability and maintainability
• Ensured compliance with international tax regulations via external providers
• Collaborated with cross-functional teams to deliver scalable, secure, and compliant services
• Enhanced transaction traceability and audit-readiness, ensuring 99.99% API uptime

Accion Technologies Pvt Ltd – Software Engineer
May 2023 – January 2025
Project: SBOM-Manager (SCA) [VERACODE]

Technologies: JDK 1.8, JDK 17, Spring Boot 3, Microservices, Restful Services, JPA, Spring Cloud Gateway API, Docker, GitLab, Maven, **Apache Kafka**
• **Cloud:** AWS (EC2, S3, Load Balancer, SQS, IAM, CloudWatch, CloudFormation)
• **Architecture: Distributed Architecture**, **High-Level Design (HLD)**, **Low-Level Design (LLD)**

Project Overview:
SBOM (Software Bill of Materials) is a crucial element in the software development, security, and maintenance processes at Veracode. It offers a transparent and detailed overview of a software application's components, empowering organizations to make informed decisions regarding their software assets and security posture.

• The SBOM document is essentially a comprehensive list of the ingredients that make up a software component, including its dependencies, hierarchy, and relevant metadata.
• In addition to the component information, the SBOM also includes a detailed list of known vulnerabilities associated with the components. This information helps organizations address potential risks proactively.
• Users can securely upload SBOM files or utilize a copy/paste option to provide these files for analysis. The system allows users to view a list of SBOM documents along with a

summarized overview for each document, including critical metadata.
• For each SBOM document, users can also access detailed scan results that provide insights into the identified vulnerabilities and other essential information.
• The SBOM supports various industry-standard formats, with the primary ones being:
o **SPDX (Software Package Data Exchange):** An open standard for describing software components, licenses, and security vulnerabilities.
o **CycloneDX:** A lightweight SBOM standard designed for use in application security contexts.

This structured and detailed approach ensures that organizations can maintain high levels of transparency, compliance, and security in their software supply chain.

Responsibilities:
o Designed and developed microservices using **Distributed Architecture**, adhering to **HLD and LLD** principles.
o Implemented **Kafka-based event-driven communication** between services for real-time updates.
o Participated in daily scrum meetings, sprint planning, status updates, and issue tracking.
o Developed and exposed REST APIs for various SBOM-related business functions.
o Managed Docker-based containerization for seamless microservice deployment.
o Ensured security compliance by configuring IAM policies and secure access controls.
o Monitored applications and resources using **AWS CloudWatch** and performed log analysis.
o Managed infrastructure as code using **Terraform** for efficient resource provisioning and scaling.

Addicor Technologies Pvt Ltd – Software Engineer *Oct 2018 – April 2023*

Project: DostawaEx (Delivery Services) *Jan 2020 – April 2023*

Technologies: JDK 1.8, Spring Boot 2.6.2, Microservices, RESTful Services, Hibernate/JPA, Spring Cloud Gateway API, Docker, AWS (EC2, S3, CloudFront, DynamoDB), **Apache Kafka**
• **Architecture: Distributed Architecture**, **High-Level Design (HLD)**, **Low-Level Design (LLD)**

Project Overview:
The objective of the project was to deliver a comprehensive, continuous delivery solution tailored to meet the diverse needs of a wide range of customers and end-users. This included business vendors seeking to provide doorstep services for their products, individuals utilizing a pick-and-delivery model, and corporate or partnered entities catering to various customer groups.

The platform aimed to serve as a one-stop solution by integrating multiple delivery models under a unified system. It was designed using a **distributed microservices architecture**, enabling high scalability, fault tolerance, and performance across geographies. The platform supported the following five core delivery services:

• **Merchant Goods Delivery Service:** Facilitating deliveries for merchants to their customers
• **Daily Delivery Service (Frequency):** Regular, scheduled delivery services
• **Pick and Delivery Service:** Handling pick-up and delivery requests for individuals
• **Corporate Delivery Service:** Tailored delivery solutions for corporate clients
• **Partnered Store Service:** Delivery integration for partner retail outlets

Responsibilities:
o Designed and developed microservices using **distributed architecture**, incorporating **HLD and LLD** design principles
o Integrated **Kafka** for asynchronous, event-driven communication between services
o Implemented caching mechanisms and optimized performance of RESTful services
o Built an automated mailing system using Spring Boot for customer communication
o Managed complex transaction flows using Spring Transaction API
o Participated in daily scrum meetings, sprint reviews, and collaborative technical discussions
o Developed and optimized REST APIs for multiple service modules, ensuring scalability and reliability

Project: OSTA (Marketplace) *Oct 2018 – Dec 2019*

- **Technologies:** JDK 1.8, Spring 4.3.2, Restful, Hibernate 4.0, Spring Tool Suite 3.9.3, MySQL, JSP

  Project Overview:
  This project involved developing an innovative online platform that delivers a hybrid combination of E-Classified and E-Commerce services. The platform allows customers to access multiple services, making it distinct from traditional e-commerce platforms by offering unique customer-to-customer and customer-to-platform exchanges.
  Key Services Provided:

1. **Product Exchange**: Customers can exchange their old products (in good working condition) for pre-owned items available on the platform.
2. **Customer-to-Customer Service**: The products available for exchange are provided by other customers, enabling a seamless customer-to-customer marketplace.
3. **Immediate Product Sale**: If a customer wishes to sell a product immediately, the platform can purchase the item directly. However, the direct sale price is typically lower than the exchange price.
4. **Exchange Options**: The platform offers two types of exchanges:
   - **Customer-to-Customer Exchange**: Facilitates direct product exchanges between customers.
   - **Customer-to-Platform Exchange**: The platform itself can purchase products directly from customers

- Responsibilities:
  - Developed a hybrid platform combining eClassified and eCommerce services.
  - Enabled customer-to-customer and customer-to-platform product exchanges.
  - Developed persistence logic using MySQL and Hibernate.
  - Designed and implemented REST APIs for business functionalities.
  - Managed transaction logic with Spring Transaction API.

Teaching Experience
Oracle Computer Education Point, Ayodhya – Faculty
Oct 2016 – Oct 2018
Guest Lecturer
Rishi Raj Singh Degree College, Ambedkar Nagar
Aug 2010 – Oct 2016

EDUCATION

- **MCA** – Dr. Ram Manohar Lohia Avadh University, 2010 70 %
- **MA (English)** – Dr. Ram Manohar Lohia Avadh University, 2005 59 %
- **BA (English)** – D.D.U Gorakhpur University, 2003 50 %

CERTIFICATIONS & AWARDS

- **AWS Certified Developer – Associate (DVA-C02)**
- **Oracle Certified Java Programmer (OCJP)**
- **HashiCorp Certified: Terraform Associate (003)**
- 5+ "Spot On" Awards for on-time project delivery

DECLARATION
I hereby confirm that the information furnished above is true to the best of my knowledge and belief.
