SUMMARY

Versatile and performance-driven Data Engineer with hands-on experience in building scalable data pipelines, stream processing systems, and full-stack platforms. Strong expertise in cloud platforms (AWS/GCP), Big Data tools (Spark, Kafka, Airflow), and backend development. Skilled in designing production-grade ETL workflows, integrating ML models, and delivering real-time analytics. Backed by solid academic foundations and leadership across high-impact projects in both industry and academia.

WORK EXPERIENCE

ANZ Sept 2025 – Present

Software Engineer - Data Science Team Bengaluru, IN

- **KnowHow Assist (Enterprise AI Assistant):** Engineered backend systems for ANZ's enterprise AI assistant. Built scalable retrieval pipelines using **FastAPI, FAISS vector search, and Gemini 3.0 embeddings, reducing knowledge-query latency to <1.5s.**
- **ML Feature Engineering Pipelines**: Designed large-scale **PySpark + Airflow** pipelines for feature extraction (embeddings, access logs, metadata flows), **increasing model training efficiency by 40%.**
- **LLM Model Serving & Optimization**: Containerized and deployed LLM micro services using **Docker, Kubernetes, and Redis caching**. **Improved inference throughput by 30%** through request batching and adaptive routing.
- Cross-functional Delivery: Collaborated with Data Scientists and Platform Teams to **productionize notebooks, standardize CI/CD, and monitor model performance in real-time.**

Junglee Games Sept 2024 – Sept 2025

Data Engineer Bengaluru, IN

- **Delta Migration for ETLs**: Migrated the entire data ecosystem (Rummy, Poker, Howzat) from Parquet to Delta Lake format, **reducing S3 and compute costs by 12% (~$2,500/month)** and enabling ACID transactions and faster query performance.
- **Finance Reconciliation ETL & Dashboard**: Built a real-time ETL pipeline for aggregating payment gateway data (Paytm, Google Pay) at game-level granularity. Enabled **80% reduction in manual reconciliation effort** and improved reporting accuracy across the Finance division.
- **AdTech Integration (Google/Facebook Ads):** Designed a **unified marketing data pipeline** for ingesting ad campaign data from multiple platforms. Enabled cross-team analytics, **real-time spend tracking**, and region/campaign-level performance insights.
- **Game Integrity Automation**: Contributed to **bot detection, anomaly flagging, and tournament reporting** through automated metrics tracking and standardized script logging — strengthening trust and gameplay fairness.
- **DAR Summarization Framework:** Developed a **PySpark based automation** system to **summarize daily gameplay and transaction data**. Integrated with dashboards for product and ops teams, enabling quicker insights and **reducing reporting overhead.**

PROJECTS

- **FitIQ:** AI-driven fitness assistant using **React, Python, Flask, and Computer Vision** for exercise tracking and personalized workouts. Project Link
- **Autosteer:** Autonomous driving assistant that predicts steering angles using **CNN models** on real-time video feeds. Project Link
- **CarbonWise: Flask** and **Python**-based app to calculate carbon footprints, suggest tree-planting offsets, and integrate **real-time data** via **RESTful APIs**. Project Link

EDUCATION

BMS Institute Of Technology & Management Dec. 2021 – May 2025

*Bachelor of Engineering in Information Science & Engineering (CGPA **9.65/10**)* Bengaluru, IN

SKILLS

Programming Languages: Python, Java, SQL, Javascript

Big Data Tools: Apache Spark, Kafka, Airflow, Hadoop, HDFS

Databases: PostgreSQL, MongoDB, MySQL, Firebase

Cloud & DevOps: AWS (EC2, S3, Glue, Lambda), Docker, Git, Google Cloud Platform, CI/CD (GitHub Actions)

Frameworks: Flask, Django, Node.js, Express, React, Keras, Tensorflow, OpenCV

Others: Software Development, Automation, Data Modelling & Warehousing, REST APIs, ETL Pipelines, MLOps

CERTIFICATIONS

- AWS Essentials - *Udemy*

- MERN Stack - *Udemy*
- Introduction to Generative AI - *Google Cloud*
- Introduction to Large Language Models – *Google Cloud*
