SUMMARY

Backend Engineer with 4.5+ years of experience building scalable backend systems, IOT platforms, automation pipelines, and cloud-native services. Specialized in Python, Django/Flask, microservices, system design, and cloud architectures.

EDUCATION

CGPA 8.43, Bachelor of Engineering, EEE, RVCE Bengaluru, Aug 2018
10+2, 96.5%, Alva's PU College, Moodabidri, Jun 2014
10, 98.08%, Alva's High School, Moodabidri, Jun 2012

EXPERIENCE

Intimetec – Senior Software Engineer **01/2021 – present**

- **Basic Wash – IoT Device Management, CRM & Billing (Python, Django, Flask, FastAPI, MySQL, React, AWS):**
  - Built a dashboard to remotely manage BalenaOS IoT devices (carwash controllers, payment terminals, wash bays) with real-time status tracking and command execution.
  - Implemented device grouping, location mapping, and role-based access to manage deployed devices.
  - Designed a subscription management system using Stripe + Active Campaign; built a customer portal for subscription management and data updates.
  - Created CRM tools including discount, referral, and AI-based campaign systems with a centralized data sync service.
  - Migrated subscription workflows from Mollie to Stripe, ensuring minimal downtime.
  - Developed reporting pipelines for revenue, uptime/downtime, and customer usage.
  - Built real-time monitoring with automated alerts for device failures.
- **Smarter Nozzle – Linux-based Video Player for Fuel Nozzles (Python, AWS, GTK, Linux):**
  - Developed a Linux-based video player for fuel-nozzle devices to play ads with playback tracking and proof-of-play reporting.
  - Added Bluetooth integration for audio playback and device synchronization.
  - Implemented playlist logic based on charging/discharging status, user preferences, and scheduled campaigns from backend dashboard.
  - Built a separate version for pump-topper displays on Ubuntu, optimized for continuous operation.
- **HRIntime – HR Platform (Python, Django, Celery, React, RabbitMQ, PostgreSQL):**
  - Designed and implemented a microservices architecture with 4+ services, each with isolated databases, ensuring scalability and fault tolerance.
  - Automated onboarding/offboarding, IT provisioning, and HR workflows using Python, reducing manual work by ~70%.
  - Built shift, scheme, leave, and attendance management modules with rules, validations, and real-time updates.
  - Built a dedicated Identity Provider Service with Azure AD for centralized authentication & authorization.
  - Designed a comprehensive RBAC system with granular permissions configurable by administrators.
  - Created an internal Python utility library to standardize common logic across microservices.
  - Implemented asynchronous task processing using RabbitMQ for notifications & background jobs.
- **Picoba – Trumpf ETL Migration (Python, Linux, ETL):**
  - Migrated legacy Talend ETL workflows to modular, fault-tolerant Python scripts, simplifying maintenance and improving reliability.
  - Developed a centralized GrayLogger submodule for structured logging across automation modules.

TECHNICAL SKILLS

Languages: Python, SQL; JavaScript, PHP, HTML/CSS, Bash/Shell (working knowledge).
Libraries & Frameworks: Django, Flask, FastAPI, GTK, Symfony, Celery.
Tools & Services: AWS, PostgreSQL, MySQL, Git, GitHub, Jira/Bitbucket, RabbitMQ, Docker.
Other: CI/CD pipelines, Problem solving, Data structures and algorithms.
