Summary

- DevOps Engineer with over 4 years of experience in designing, automating, and optimizing scalable cloud and containerized environments.
- Hands-on expertise in DevSecOps practices, microservices-focused CI/CD pipelines, and cloud-native principles across AWS, with exposure to Azure AKS, and GCP GKE.
- Proven success in reducing costs, improving release efficiency, and enhancing system security through infrastructure automation, observability, and collaboration with cross-functional teams.
- Recognized for achieving up to 40% efficiency improvements across CI/CD, infrastructure automation, and release workflows, directly supporting business objectives.

Skills

- **Cloud Platforms:** AWS (EKS, S3, EC2, VPC, Route 53, IAM), Azure (AKS), GCP (GKE)
- **Containerization & Orchestration:** Kubernetes, Docker, Helm
- **CI/CD & SCM:** GitLab, Git, Argo CD, Nexus Artifactory
- **Infrastructure as Code:** Terraform, Kustomize
- **Monitoring & Observability:** Prometheus, Grafana, OpenTelemetry, Lightstep, Thanos
- **Logging & Security:** Elasticsearch, Fluent Bit, Kibana, Vault, Keycloak, SonarQube
- **Scripting & OS:** Python, Bash, Shell, Linux, Windows
- **Principles & Practices:** DevSecOps, Cloud-Native, Microservices
- **Messaging & Streaming:** Apache Kafka

Professional Experience

DevOps Engineer, HighRadius | Feb 2025 – Present

- **Achieved Infrastructure automation of 60+ microservices** with ArgoCD, Helm, and Kustomize, **reducing manual efforts** and accelerating release cycles.
- Led migration of the CFO Tech Product from AWS EKS to Azure AKS, **coordinating with 4+ teams and migrating 20+ microservices.**
- Implemented Karpenter for intelligent compute allocation, **reducing infrastructure costs by 30%** while improving cluster efficiency.
- Set up Nexus Artifactory for automated distribution of Python packages.
- Migrated GitLab Runners from EC2 ASGs to Kubernetes, **reducing job queue time by 50%** and improving fault tolerance.
- Integrated Hashi Corp Vault with Secret Provider Class, **reducing in-cluster Kubernetes secrets by 80%** and significantly strengthening secret management security.
- Architected a reusable CI/CD pipeline template, **centralizing build and release automation in GitLab** and improving deployment consistency **across 30+ microservices.**

Associate DevOps Engineer, HighRadius | Feb 2021 – Jan 2025

- Identified and led the deployment of a secure, self-hosted Draw.io alternative and effectively communicated **integration workflows with Google Drive, enabling 100% secure backups**.
- Configured Horizontal Pod Autoscaling by fine-tuning CPU/memory requests and limits, **resulting in an 80% drop in OOM Kill events** and smoother workload performance.
- Integrated GitLab with Jira using pre-receive hooks, **automating reviews and reducing buggy merges by 60%.**
- Optimized Docker images, **cutting image size by 70%** using distroless images and caching.
- Embedded SonarQube & SAST in GitLab pipelines, **reducing high-severity vulnerabilities by 50%.**
- Calibrated Kubernetes resource limits, **enhancing utilization efficiency and increasing capacity planning accuracy by 40%.**
- **Integration of Kafka** as a subsystem with **Python and Maven** based microservices.

Awards & Achievements

- Recognized as “Highflyer of the Year” for **reducing EC2 costs by 30%** and improving release efficiency.
- Earned a double promotion within 12 months, contributing to high-priority project success and a 30% uplift in team delivery efficiency.

Education

Chitkara University | Aug 2018 - Aug 2022
Bachelor of Technology in Computer Science and Engineering
