GURUPRASAD V

Senior DevOps / Platform Engineer
Bangalore, India | mailto:vgpguru94@gmail.com | linkedin.com/in/guruprasad.v | +91-9487549375

EXECUTIVE SUMMARY

High-impact Senior DevOps Engineer with 4+ years of production experience building reliable CI/CD platforms and cloud infrastructure across Azure, AKS, and hybrid environments. Delivered **35+ production releases/month**, improved platform availability to **99.95%**, reduced environment provisioning time by **50%**, and cut incident detection time by **40%** through automation, observability, and standardization. Strong hands-on ownership across Terraform IaC, Kubernetes operations, Azure DevOps pipelines, PowerShell automation, and cloud security. Known for production troubleshooting, pipeline reliability, and operational excellence.

CORE TECHNICAL SKILLS

Cloud & Platforms: Microsoft Azure, AWS, Hybrid / On- Prem, Virtual Networks, Load Balancing
Containers & Orchestration: Kubernetes (AKS), Docker, Helm, Azure Container Registry (ACR)
CI/CD & DevOps: Azure DevOps Pipelines, GitHub Actions, YAML Pipelines, Artifact Management, Git, TFS
Infrastructure as Code: Terraform, ARM Templates, Environment Automation, Modular IaC
Monitoring & Observability: Azure Monitor, Log Analytics, Prometheus, Grafana, Alerting, Dashboards
Security & Governance: RBAC, Secrets Management, Azure Key Vault, Secure Pipelines, Access Control
Automation & Scripting: PowerShell, Bash, Python
Operating Systems: Linux Administration
Reliability Engineering: High Availability, Disaster Recovery, Backup & Restore Automation, Incident Response
Tooling: SonarQube, Kafka

PROFESSIONAL EXPERIENCE

Senior DevOps Engineer – Odessa Technologies

February 2025 – Present

- Owned end- to- end CI/CD platform supporting **35+ production releases per month** across Azure, AKS, and hybrid environments, improving release reliability and deployment consistency.
- Designed reusable **Terraform modules and ARM automation**, reducing environment provisioning time by **50%** and eliminating manual configuration drift.
- Improved platform availability to **99.95% uptime** by optimizing Kubernetes resource requests/limits, rollout strategies, health probes, and scaling policies.
- Implemented centralized observability using **Azure Monitor, Prometheus, and Grafana**, reducing incident detection time by **40%** and improving MTTR through actionable dashboards and alerts.
- Built automation frameworks using **PowerShell, Bash, and Python** to standardize deployments, validate configurations, automate backups, and reduce operational errors.
- Hardened CI/CD and runtime security by enforcing **RBAC, secrets management via Azure Key Vault, least- privilege access, and pipeline governance**.
- Partnered with developers and QA teams to stabilize releases, automate quality gates, and improve deployment success rate.

DevOps Engineer – Odessa Technologies

June 2022 – February 2025

- Automated build and release pipelines delivering **20+ deployments per month**, improving release velocity and reducing manual deployment risks.
- Containerized enterprise workloads using **Docker and Kubernetes (AKS)** with secure image workflows through **Azure Container Registry (ACR)**.
- Standardized infrastructure provisioning using **Terraform and ARM templates**, improving environment consistency, scalability, and auditability.
- Implemented centralized monitoring, access control, and operational automation, improving system visibility and operational stability.
- Built automation scripts for environment validation, service management, and configuration checks, reducing manual effort and deployment errors.
- Supported production incidents, root cause analysis, and platform improvements with a strong focus on reliability and uptime.

KEY ACHIEVEMENTS

• Supported **35+ production releases per month** in a regulated enterprise environment.
• Accelerated environment provisioning by **50%** through **Infrastructure as Code and automation**.
• Maintained reliable application deployments on **Kubernetes (AKS)** with monitoring and operational support.
• Reduced incident detection time by **40%** using centralized monitoring and alerting.
• Standardized CI/CD pipelines and infrastructure across environments to improve deployment consistency.
