Profile

Software Developer with 2+ years of experience building scalable backend systems and full-stack MERN applications. Specialized in Node.js and FastAPI microservices, RESTful API design, and cloud-native application deployment on AWS and Azure. Proficient in JavaScript, React.js, and Express.js, with strong expertise in database optimization, enterprise backend development, and Agile delivery using Docker, Jenkins, and Git.

Skills

Languages: JavaScript • TypeScript • Python • PHP
Frontend: React.js • Next.js • HTML • CSS • Tailwind
Backend: Node.js • Express.js • FastAPI • REST APIs • Microservices
Databases: MongoDB • PostgreSQL • Oracle PL/SQL • Redis
Cloud & DevOps: AWS (EC2, S3, Lambda) • Azure • Docker • Jenkins • CI/CD
Tools: Git • Postman • SoapUI • Figma

Experience

Associate Consultant (Backend Developer) - ORACLE **June 2023 – Present (2.5 Years)**

- Delivered **20+ new features and business logic enhancements** by updating frontend components (React, OJET, JavaScript) and backend services (Node.js, PL/SQL), reducing client request turnaround time to under one week.
- Designed and implemented **RESTful APIs using Express.js and PL/SQL**, enabling batch processing of hundreds of banking records and improving operational efficiency while reducing inter-system failures by 25%.
- Contributed to a **microservices-based Node.js architecture** by building modular services and implementing structured **logging, error handling, and optimizations**, improving scalability, maintainability, and faster diagnosis of production issues.
- Built **scalable Node.js backend services** using PM2 and the Cluster module, enabling multi-core utilization, high availability, and zero-downtime deployments, resulting in **99.9% system uptime**.
- Developed **asynchronous APIs and cron-based automation** for file ingestion, processing 2 SWIFT message formats and 2 KPLUS data types, eliminating manual intervention and improving data reliability.
- Performed **end-to-end testing and debugging** of 15+ REST and SOAP APIs using Postman and SoapUI, resolving 10+ production issues.
- Modernized legacy banking workflows by converting core functionalities into **reusable REST APIs**, accelerating integrations and improving cross-system interoperability.
- Implemented **JWT-based authentication, and secure role-based access controls** using custom middleware to ensure secure API endpoints, and ensuring consistent API behavior across environments.
- Collaborated within **Agile cross-functional teams**, participating in code reviews, sprint planning, and production releases to improve delivery quality and development velocity.

Full Stack Developer (Intern) - LUMINAR MEDIA **November 2021 – August 2022 (10 Months)**

- Contributed to **2 MERN stack projects**, developing scalable backend services using Node.js (cluster) and Express.js and building reusable, responsive UI components with React, achieving 99.9% application uptime.
- **Implemented 40+ RESTful APIs**, improving response performance and strengthening security using JWT authentication, role-based access control, and optimized legacy routing via Apache .htaccess.
- **Deployed applications on AWS and Vercel**, set up CI/CD workflows, and performed debugging and API validation using Postman and Chrome DevTools, while managing collaborative development through Git version control.

Education

VIDYALANKAR INSTITUTE OF TECHNOLOGY, August 2020 – May 2023
B.E. IN INFORMATION TECHNOLOGY **9.56 CGPA**

SANJAY GHODAWAT POLYTECHINC, April 2017 – June 2020
DIPLOMA IN COMPUTER SCIENCE **92.57 Percent**
