# PRANAY KUMAR RAY

Devops Engineer
8892545586 • kumarpranayray02@gmail.com

## PERSONAL SUMMARY

Experienced and results-driven **DevOps Engineer** with over **3 years of hands-on experience** in building and managing **CI/CD pipelines**, automating infrastructure, and deploying **containerized applications** across **Azure and AWS** environments. Proven expertise in **Docker**, **Kubernetes**, and **Terraform** for scalable, reliable, and efficient application delivery. Adept at integrating tools like **Prometheus**, **Grafana**, and **SonarQube** to support real-time data streaming, monitoring, and code quality enforcement. Strong background in **cloud-native security**, **infrastructure as code (IaC)**, and incident response automation. Known for reducing build/deployment times, ensuring high availability, and driving DevOps best practices across cross-functional teams. Actively seeking challenging opportunities to deliver high-impact solutions in dynamic, growth-focused DevOps environments.

**Skills:**

- **Operating Systems**: CentOS, RHEL- 7, Ubuntu, Linux, windows
- **Scripting Languages**: Shell scripting
- **Source Code Management (SCM)**: Git (GitHub, Bitbucket, Azure Repos)
- **Build Tools**: Maven, MSBuild
- **Code Coverage Tool**: SonarQube
- **Artifactory Tool**: Azure Artifactory, Nexus
- **CI/CD Tools**: Azure DevOps, Jenkins, TeamCity
- **Infrastructure as Code (IaC)**: Ansible, Terraform
- **Containerization Tools**: Docker, Kubernetes
- **Issue / Bug Tracking Tools**: Azure Boards, JIRA
- **Documentation/Collaboration**: Confluence
- **Cloud Platforms**: AWS, Azure
- **Monitoring Tools**: Azure Monitor, Amazon CloudWatch,Prometheus, Grafana
- **Databases:** PostgreSQL, MySQL, MongoDB, MSSQL

## Experience

Rezo.ai — noida
Cloud engineer — 09/2025 - Present

- Working on cloud infrastructure management, CI/CD pipelines, and automation of deployent process.
- Managing configuration and provisioning using tools like Terraform/Ansible.
- Collaborating with development teams to optimize cloud resources and streamline release workflows.

Tringapps (Client: Piramal) — Bangalore, India
Devops Engineer — 12/2024 - 09/2025

- **Designed, deployed, and managed Kubernetes clusters** using Rancher, improving visibility and reducing manual interventions by **60%**.
- **Built canary deployment pipelines** using Ansible, Jenkins, and Kubernetes, enabling **zero-downtime microservices releases** and reducing rollback time by **70%**.
- **Developed and optimized CI/CD pipelines** in Jenkins, cutting build and deployment times by **50%** and boosting release velocity by **3x**.
- **Containerized applications** with Docker, ensuring consistent environments and reducing environment-specific issues by **75%**.
- Integrated **Apache Kafka** for real-time event streaming, improving event handling and reducing data latency by **30%**.
- Managed cloud infrastructure on **AWS** (EC2, S3, IAM, CloudWatch), optimizing usage and lowering cloud costs by **25%**.
- Automated infrastructure provisioning with **Terraform and Ansible**, reducing setup time by **80%** and minimizing configuration errors.
- Implemented **centralized monitoring and logging** using Prometheus, Grafana, Loki, and CloudWatch, achieving **99.9% uptime** and faster issue resolution.
- Ensured code quality with **SonarQube** in CI pipelines, reducing critical issues by **60%** and increasing maintainability by **35%**.
- Collaborated with development and QA teams via **Jira and Confluence**, improving sprint efficiency and workflow visibility by **20%**.
- Configured and managed **load balancers using Rancher**, enhancing traffic distribution and high availability for production workloads.

12thWonder — Pune, India
Devops Engineer — 06/2022 - 11/2024

- **Designed and implemented CI/CD pipelines** using **Azure DevOps** and **TeamCity**, automating build, test, and deployment processes across multiple projects and reducing build time by **40%**.
- **Wrote and maintained Shell scripts** to automate deployment, server provisioning, log rotation, and monitoring tasks, increasing operational efficiency and reducing manual work.
- **Managed jump server (bastion host)** to securely control access to production and staging environments, enhancing infrastructure security and audit compliance.
- **Used Terraform to provision cloud infrastructure from scratch to deployment**, enabling reproducible, scalable, and version-controlled infrastructure across **AWS** and **Azure**.
- **Managed infrastructure on Azure and AWS**, provisioning compute, storage, and network components, improving cloud cost efficiency by **20%** through optimization.
- Configured **Azure Blob Storage** and **AWS S3** for scalable backups, data storage, and archival needs.
- Built **monitoring and alerting dashboards** using **Prometheus**, **Grafana**, and **CloudWatch**, improving visibility and reducing response time by **35%.**
- Supported **Linux and Windows Server** environments, ensuring uptime and applying patches and configuration updates.
- Managed web servers (**Apache, Nginx, IIS, XAMPP**) and deployed apps built in **PHP, Angular, .NET, and .NET Core**.
- Integrated **SonarQube** with pipelines to enforce code quality and fixed multiple **dependency and build issues**, reducing release failures by **30%**.
- Integrated **SMTP email alerts** in CI/CD pipelines, enabling **real-time failure notifications** to service owners and infra team, reducing response time by **40%**.

## Education

### Dayanada Sagar College of Engineering
Bachelor of Engineering

Bangalore, India
08/2013 - 07/2017

## Projects

### Sustainium

- Built and maintained CI/CD pipelines in Azure DevOps, reducing deployment time by **40%** and enabling **100% automated** build, test, and release cycles across dev and prod environments.
- Containerized application components with Docker and deployed to Azure Kubernetes Service (AKS), improving system scalability and uptime to **99.95%**.
- Managed PostgreSQL databases with performance tuning and automated backups, reducing query latency by **30%** and ensuring **zero data loss** incidents.
- Integrated Prometheus and Grafana to deliver real-time infrastructure observability; decreased mean time to resolution (MTTR) by **35%**
- through proactive alerting.Used Terraform and Ansible to provision and configure infrastructure, achieving **80% reduction** in manual efforts and ensuring consistent, repeatable environments.
- Embedded SonarQube into CI pipelines, increasing code quality and reducing bugs in production by **25%** over 3 months.
- Leveraged Azure services (VMs, Storage, Networking) to deploy secure and cost-efficient infrastructure, cutting cloud expenditure by **20%** via resource optimization.

### Titan TLM

- Developed and maintained **20+ CI/CD pipelines** in TeamCity for Node.js, Angular, and .NET applications, reducing deployment time by 50% and enabling daily releases.
- Created and managed Shell scripts to **automate deployment tasks**, provision environments, and perform server health monitoring, reducing manual intervention across 10+ environments.
- Deployed and configured **web applications on IIS** hosted on Windows Server, **ensuring 99.9% uptime**, scalable architecture, and robust logging for streamlined troubleshooting.
- Integrated SonarQube with CI pipelines for projects to enforce static code analysis and quality gates, leading to a **40% reduction** in code smells and improved code maintainability.
- Implemented Prometheus and Grafana monitoring for applications and infrastructure components, **creating dashboards and alerting rules** to detect and respond to issues proactively.
- Collaborated with development and QA teams to streamline release workflows, **increase deployment success rates by 60%**, and cut release time from 1 hours to under 30 minutes.

### FinTech Platform – Real-Time Payment Processing System

- Designed and implemented a highly available **DevOps infrastructure** for a real-time payment processing platform handling thousands of transactions per second in a secure, compliant environment.
- Built and managed CI/CD pipelines in Jenkins for **200+ microservices (Java & Node.js)** in a FinTech environment, integrated with Git to automate testing, building, and deployment — enabling faster and more reliable delivery of code across distributed teams.
- Deployed and **orchestrated 200+ microservices using Docker containers and Kubernetes clusters**, managed via **Rancher** for simplified lifecycle management across multiple AWS environments — improving scalability and reducing infrastructure provisioning time by 60%.
- Integrated **Apache Kafka** for event-driven architecture and real-time message streaming between payment processing modules and fraud detection services.
- Configured **Prometheus** for collecting application and infrastructure metrics, and **Grafana** for creating real-time dashboards and alerting on performance and system health.
- Set up **Opsgenie** for alert routing and incident management, ensuring critical issues were escalated to **on-call engineers in under 30 seconds**.
- Deployed and managed cloud infrastructure on AWS, leveraging **EC2, EKS, RDS, and S3 to support 200+ microservices** — achieving **99.99%** availability, auto-scaling for peak traffic loads, and reducing infrastructure costs by 30% through optimization strategies.
- Used **Ansible** for configuration management and infrastructure automation, standardizing server configurations and reducing manual errors across all environments.
- Collaborated with development, security, and QA teams to implement secure CI/CD practices aligned with PCI DSS standards, enabling faster and more reliable releases — **improving deployment frequency by 50% and ensuring 100%** compliance in regulatory audits.
