# Daniel William

Full Stack Engineer - Backend Heavy

Bangalore, IN | +91 9497460763 | danielwilliam.dev@gmail.com

## Profiles

dwi13L

-daniel-william

## Summary

Go-to engineer for technology assessment, rapid prototyping, and turning ambiguous ideas into working proofs that guide product direction. Recognized for delivering extensible and maintainable services by leveraging solid principles and design patterns. Credibility backed by end-to-end service ownership and accelerated progression to Lead Engineer within three years.

## Skills

### Languages

Java, Python, JavaScript, TypeScript

### Frameworks & Libraries

Spring Boot, Apache Camel, FastAPI, Express, React Js, Redux

### Databases

PostgreSQL, MongoDB, Redis, ClickHouse

### Agentic AI Stack

LangGraph, OpenAI sdk, A2A, MCP, AWS OpenSearch, Pinecone

### DevOps

Git, Docker, AWS, Dynatrace, CI/CD

## Experience

**Tario AI** | **April 2025 - Present**
A Zycus subsidiary | Bangalore, IN

**Lead Engineer** | *April 2025 - Present*

- Designed, prototyped and developed AI agents and human-in-the-loop agentic workflows using LangGraph.
- Implemented integrations with email providers (Gmail, Outlook) using OAuth and enabled email retrieval and transformation.
- Built PoCs for RAG, Deep Research Agents with web scraping capabilities.

**Zycus** | **July 2022 - Present**
Bangalore, IN

**Senior Software Engineer** | *April 2024 - March 2025*

- Implemented external integrations and client data ingestion pipelines.
- Led the adoption of Cube JS as a semantic layer for Lythouse | ESG Platform resulting in 35% reduction in execution time.
- Developed AI powered SeaTunnel Job Configuration UI enabling end users to configure ETL jobs without the assistance of implementation experts.

**Associate Software Engineer** | *October 2022 - March 2024*

- Improved React UI component to handle 144k records and work seamlessly without lazy loading.
- Implemented user federation in Apache superset with Keycloak.
- Designed ABAC (attribute based access control) in superset to enable fine-grained access control.
- Modified Flowable engine to support multi-tenancy.

**Trainee Software Engineer** | *July 2022 - September 2022*

- Implemented nuanced Row Level Security in PostgreSQL with practically zero performance impact.
- Migrated and refactored J2EE features to Spring Boot improving maintainability and product stability.
- Developed internal tools for database cleanup and cache priming.

## Noteworthy

### Honors & Awards

- Promoted to Lead Engineer within 3 years (accelerated track)
- Endorsed by managers & peers for being a quick learner, design thinker and a team player.
- Top performance rating (5/5) for two consecutive years — 2024 & 2025
- Zycus Agility Award — October 2023 (recognition for agility and team spirit)

### Strengths

- Ability to think in terms of business value and translate it into technical solutions.
- Strong verbal and written communication skills which translates to effective prompt engineering.
- Experienced in using project management tools like Jira, Github Projects, Notion, running sprints and mentoring junior engineers.

Jira, Github Projects, Notion, Agile Methodology, Mentoring

## Education

**Executive Post Graduate Programme in Software Development** | **June 2022**
IIIT-B

Full Stack Development, Spring Boot, React, AWS

**Bachelor of Business Administration** | **March 2018**
Marian College Kuttikkanam
