Rahul Dikkar

Navi Mumbai, 400701, India | rahuldikkar2727@gmail.com | +91 8605872346

Profile

DevOps Engineer with **2.4+ years of hands-on experience** designing, deploying, and operating **highly available, scalable cloud-native platforms** in **production environments**. Deep expertise in **Kubernetes (GKE, EKS), CI/CD automation, and Infrastructure as Code (Terraform, Helm, Ansible)**, enabling reliable, repeatable, and secure deployments. Proven track record of implementing **SRE best practices**, **enterprise observability** (Prometheus, Grafana, Loki, Mimir, Tempo, ELK), and **incident management workflows** to achieve **99.9%+ uptime**, significantly **reduce MTTR**, and improve system resilience. Strong background in **DevSecOps, cloud security, distributed systems, Apache Airflow, Kafka (Confluent Platform), and PySpark**, delivering **high-throughput, low-latency platforms** supporting **large-scale, mission-critical workloads**.

Professional Experience

DevOps Engineer, Jio Platforms Limited, Navi Mumbai, Maharashtra
Oct 2023 — Present

- Designed and operated production-grade Kubernetes (GKE) clusters across multiple environments, maintaining 99.9% availability and secure deployments.
- Built and optimized CI/CD pipelines using Azure DevOps and Jenkins, reducing deployment time by 40% and improving release reliability.
- Implemented an enterprise observability stack (Prometheus, Grafana, Loki, Tempo, Mimir), improving incident detection and reducing MTTR by 30%.
- Automated infrastructure provisioning and configuration using Terraform, Helm, Ansible, Golang, and Bash, cutting manual operational effort by 60%.
- Strengthened cloud security and compliance by integrating HashiCorp Vault for secrets management and enforcing TLS-based secure communication.
- Deployed and operated Kafka clusters (Confluent Platform) to support high-throughput, low-latency distributed messaging workloads.
- Managed HA PostgreSQL and MySQL deployments on Kubernetes using Helm charts, improving database reliability, scalability, and failover handling.
- Optimized traffic management using NGINX Ingress and GCP networking (VPCs, subnets, firewall rules, internal load balancers, and peering), improving routing efficiency, security posture, and reducing application latency.
- Participated in production incident triage and post-incident reviews for high-traffic Kubernetes platforms.
- Designed and orchestrated Apache Airflow DAGs integrated with PySpark for large-scale ETL and analytics pipelines, automating daily data processing workflows.

Education

Bhameshwar Vidyalaya , Patoda, Maharashtra
10th SSC (87.40%), Jun 2016 — Mar 2017

Government Polytechnic, Ambad
Diploma in Computer Engineering (84.57%), Aug 2017 — Jul 2020

Maharashtra Institute of Technology, Chh. Sambhajinagar (Aurangabad)
BTech in Computer Science and Engineering (94.7%), Dec 2020 — Jul 2023

Technical Skills

Cloud & Containers:	Google Cloud Platform (GCP), Kubernetes (GKE, EKS), Docker, AWS, Linux Administration
CI/CD & DevSecOps:	Azure DevOps, Jenkins, Terraform, Ansible, Helm, Git, SonarQube, Blackduck, Fortify
Observability & Monitoring	Prometheus, Grafana, Loki, Tempo, Mimir, ELK Stack, Alerting, SLO/SLA, MTTR, Incident Response
Security :	HashiCorp Vault, SAST/SCA, Secrets Management, TLS, Secure CI/CD, IAM
Data & Messaging :	Apache Airflow, Apache Kafka (Confluent Platform), ETL Pipelines, PySpark, PostgreSQL, MySQL (HA, Replication, Failover)
Languages & Scripting :	Golang, Bash, Python, Shell Scripting
Networking & Load Balancing:	NGINX, GCP Load Balancer, VPC Networking, Firewall Rules, Service Mesh (Istio)

Projects

JioCX, Navi Mumbai
Oct 2023 — Present

- Architected and scaled a Kubernetes-based microservices platform on GCP, processing 500M+ messages per day with 99.99% availability and low latency.
- Implemented DevSecOps CI/CD pipelines using Azure DevOps, integrating SonarQube (SAST), Fortify, and Black Duck to enable shift-left security.
- Integrated HashiCorp Vault with Kubernetes for dynamic secrets injection, encryption at rest, and centralized audit logging across multi-cluster environments.
- Implemented GCP Workload Identity to enable Kubernetes workloads to securely access GCP resources using IAM service accounts, eliminating long-lived service account keys and strengthening cloud security posture
- Optimized traffic management using NGINX Ingress, GCP internal load balancersand automated firewall policies, improving throughput, security posture, and request latency.
- Implemented scalability and resilience enhancements by tuning Kubernetes resource requests/limits, horizontal pod autoscaling, and rolling deployment strategies, ensuring stable performance during peak traffic spikes.

JioObservability, Navi Mumbai
Oct 2023 — Present

- Designed and scaled an enterprise observability platform using Grafana, Prometheus, Loki, and Tempo on GKE, leveraging Helm for standardized deployments.
- Built dashboards, alerting rules, and incident workflows supporting 100+ critical applications, reducing MTTR by 35% and improving overall reliability.
- Provisioned scalable persistent storage using GKE-managed storage classes (PVCs) to support high-volume observability data workloads.
- Integrated AI/ML-based analytics in Grafana for proactive anomaly detection and advanced performance insights.
- Established end-to-end observability across distributed Kubernetes workloads by implementing metrics, logs, and distributed tracing to enable faster RCA.
- Standardized monitoring and alerting best practices across teams by defining reusable dashboards, alert templates, and SLO-based alerts, improving observability adoption and operational consistency.

Courses & Certifications

- **Certified Kubernetes Administrator (CKA), O'REILLY**
- **Azure DevOps and CI/CD with Git, O'REILLY**
