VIKAS GS

Bengaluru, Karnataka, India
+91-7483078339 ◦ vikasgiri2012work@gmail.com ◦ Linkedin

TECHNICAL STRENGTHS

Languages: Shell Scripting, Groovy Scripting, Python
Tools: Jenkins, Maven, Helm,Terraform, Ansible, Kubernetes, Docker, GIT, Gitlab, JFrog, FortifyHub, Grafana
AWS: VPC, EC2, S3, IAM, EKS

WORK EXPERIENCE

OpenText , Bangalore Aug 2022 - Present
Devops Engineer/ Platform Engineer

- **3.5+ Years** of experience in development and operations of microservices on **kubernetes**.

- **Docops onboarding to Jenkins:**
- Led the successful migration of over **190 Jenkins jobs** from traditional Linux-based execution to **Kubernetes POD-based systems**, resulting in significant cost savings on AWS EC2 instances and improved resource utilization.
- Created and maintained **three custom Docker images** tailored for CI/CD workloads, enhancing portability, consistency, and reducing onboarding time for new jobs.
- **Designed a scalable Jenkins pipeline architecture and centralized shared library**, eliminating code redundancy, improving maintainability, and earning formal recognition for engineering excellence.

- **Base imageAutomation:**
- Developed an end-to-end automation pipeline using **Groovy** and **Shell scripting** to streamline the update process of UBI base images across multiple repositories, reducing manual intervention and increasing consistency.
- Designed a robust **three-phase workflow** that automates pull request creation, triggers verification jobs, and seamlessly integrates with custom scripts for **automatic approval and merging** within GitLab.
- **Reduced development cycle time by 1.5 days per image update**, leading to significantly improved team productivity and faster release cycles.

- **Streamline the Projects:**
- Led the optimization and automation of converting legacy Freestyle Jenkins jobs into **Kubernetes POD-based Multi-branch Pipeline Projects**, significantly improving scalability, maintainability, and alignment with modern DevOps best practices.
- **Designed Python–Flask Microservice** to execute **parallel, multi-tenant API** workflows across 40+ endpoints and generate detailed functional and data accuracy reports. Reduced manual effort by 70% and significantly improved issue detection prior to production release.
- Used **Python Automation code** to update Java based Projects (POM.xml syncup mechanism) which reduce manual intervention of developers by half day.
- Collaborated closely with senior DevOps engineers to **architect a robust CI/CD project flow** and to **design a hierarchical, efficient Artifactory repository layout**, enabling seamless artifact management, faster retrievals, and streamlined access for cross-functional teams.
- Designed and developed a centralized Jenkins **Shared Library** to enforce standardized coding practices, eliminate duplication across pipelines, and enhance code reusability, resulting in improved reliability and maintainability across the organization's automation workflows.

- **CTK (Cloud Tool Kit):**
  Developed and maintained a Terraform-based Cloud Toolkit (CTK) to automate the provisioning of infrastructure across cloud environments for seamless application deployment.

EDUCATION

The National Institute Of Engineering *Aug 2018 - Aug 2022*
BE In Information Science And Engineering) CGPA: 9.33
