Senior Devops Engineer

Name – Anil Kumar Singh
Ph No: +91 9958736552 | EMail: anilk1singh0@gmail.com
Address: Rajnagar Extension, Ghaziabad – 201017

Professional Summary:

- Currently having 6 years of experience in IT with focus on **DevSecOps** engineering, CI/CD automation, and production deployments.
- Hands-on experience in packaging, releasing and configuring applications across multiple environments.
- Strong knowledge of SDLC and Agile methodologies with active involvement in weekly release cycles.
- Provisioned and managed AWS Services including EC2, S3, ELB, RDS, IAM, VPC, Route53, and Auto Scaling.
- Experienced in Infrastructure as Code using Terraform for automated provisioning of cloud resources.
- Integrated Terraform into CI/CD pipelines for consistent deployments across dev, QA, and production.
- Designed and implemented CI/CD pipelines using Jenkins and AWS Code Pipeline.
- Automated build, artifact versioning, and multi-environment deployments (Dev/Staging/Prod).
- Developed branching strategies and source code management best practices using Git and GitHub.
- Integrated Jenkins with Git and implemented automated triggers using GitHub Webhooks.
- Worked with SonarQube to enforce code quality and Nexus for artifact repository management.
- Containerized applications using Docker, created custom Dockerfiles and managed container images/volumes.
- Deployed applications to Kubernetes clusters using automated CI/CD workflows.
- Managed on-premises Kubernetes clusters using Rancher and implemented GitOps workflows with ArgoCD.
- Implemented incremental IIS deployments, reducing deployment time significantly.
- Integrated Trivy scans and enforced CVE security compliance gates in CI/CD pipelines.
- Enabled monitoring, tracing, logging, and dashboards using Datadog (APM, Traces, RUM).
- Experience with Ansible for configuration management and multi-node automation.
- Performed application deployments on Nginx/Apache Tomcat web servers.
- Integrated and managed RabbitMQ for asynchronous processing and messaging workloads.
- Performed production support, monitored workloads, implemented rollback strategies, and reduced MTTR by ~30%.
- Implemented incremental IIS deployments, reducing deployment time by ~40%
- Implemented DevSecOps practices across CI/CD pipelines to shift security left and enforce secure coding standards.

Environment: Amazon Web Services (AWS), DevSecOps, SonarQube, Trivy, CVE, Git, GitHub, Maven, Tomcat, Apache, Nginx, Linux, Windows Server, Git Action, Jenkins, Terraform, Ansible, Docker, Kubernetes, ArgoCD, Shell Scripting, Groovy Scripting, YAML, Python Scripting, SQL Server, RabbitMQ Server, Prometheus, Grafana, Datadog, Jira.

Professional Experience:

- **Senior Devops Engineer**
  Bigship Technologies Pvt. Ltd. | Aug 2025 – De, 2025
- **Senior Devops Engineer**
  Softic Digitech Pvt. Ltd | January 2020 – Aug 2025

Professional Projects:

Project Name : Logistic Aggregator Project
Role : Sr. DevOps Engineer.

- Worked extensively on on-premises infrastructure, ensuring high availability, performance optimization, and secure operations for business-critical applications.
- Designed, implemented, and enhanced CI/CD pipelines using Jenkins, enabling automated build, test, and deployment workflows across multiple environments (Dev, Staging, Prod) for domestic, ERP and international projects.
- Integrated security scanning and quality checks into CI/CD pipelines, improving code quality, compliance, and early vulnerability detection across environments.
- Dockerized PHP applications, enabling container-based deployments and improving scalability and consistency across environments.
- Implemented parallel processing using Docker for Tesseract-OCR workloads, significantly improving OCR processing performance and throughput.
- Deployed and configured Datadog for full-stack observability, including:
  - ✓ Application Performance Monitoring (APM)
  - ✓ Distributed Tracing
  - ✓ Real User Monitoring (RUM)
- Created Datadog monitors, alerts, and dashboards to track application health, infrastructure performance, and user experience, enabling proactive issue detection and real-time team notifications.
- Played a key role in application architecture planning and documentation for cloud migration initiatives, covering Domestic, International, and ERP systems.
- Prepared end-to-end AWS migration documentation for applications with:
  - ✓ Frontend: Angular
  - ✓ Backend: .NET & PHP (Laravel)
  - ✓ Database: MS SQL Server
- Designed AWS architecture leveraging EC2, S3, VPC, Subnets, Security Groups, NACLs, Load Balancers, Auto Scaling, Route 53, and NGINX, ensuring scalability, security, and fault tolerance.
- Collaborated with development and testing teams to ensure smooth deployments, minimal downtime, and operational excellence.
- Provided continuous improvement recommendations for performance, observability, and cost optimization across infrastructure and applications.

Environment: Jenkins, GitHub, Docker, Datadog (APM, Traces, RUM), AWS (EC2, S3, VPC, VPC Peering, ALB, ASG, NACL, Route 53), SSL, NGINX, Linux Server, IIS, Windows Server, Shell Scripting, Groovy Scripting, Python Scripting, RabbitMQ Server, Jira.

Project Name : Fintech Project
Role : AWS DevOps Engineer.

- Designed, deployed, and managed AWS infrastructure using EC2, EBS, S3, Glacier, VPC, VPC Peering, Subnet, Security Groups, NACL, Route53, ELB, Auto Scaling, RDS, EKS, CloudFront, ElastiCache, CloudWatch, CloudTrail, Lambda, SNS, and Elastic Beanstalk to support highly available fintech platforms.
- Led on-prem to AWS cloud migrations using Terraform, Ansible, Kubernetes, Jenkinns, and ArgoCD, achieving zero-downtime production cutovers.
- Built and maintained Jenkins CI/CD pipelines for automated build, test, and deployment, significantly improving release frequency and deployment reliability.
- Implemented Git branching and release management strategies (feature, release, hotfix) to ensure controlled, traceable, and stable code promotion across environments.
- Automated server provisioning, application deployment, and Tomcat configuration using Ansible playbooks and roles, reducing manual effort and configuration drift.
- Provisioned and managed Infrastructure as Code (IaC) with Terraform, enabling repeatable, version-controlled, and secure cloud environments.
- Deployed and operated Kubernetes (EKS) clusters for microservices-based fintech applications, ensuring high availability, scalability, and fault tolerance.
- Implemented monitoring and observability using Prometheus and Grafana, with alerts and alarms for node health, application performance, and security events.
- Developed Shell scripts for system automation, log monitoring, backups, and deployment tasks to improve operational efficiency.
- Administered and optimized Linux servers, performing patching, performance tuning, and troubleshooting for mission-critical services.
- Built and supported secure, scalable API services used by multiple applications and external integrations.

Environment: AWS Services, Terraform, Ansible, Jenkins, Docker, Kubernetes, ArgoCD, GitOps, Prometheus, Grafana, SQL Server, Shell Scripting, Goovy Scripting, YAML, Tomcat, Linux, Jira.

Project Name : HealthCare Project
Role : Devops Engineer.

Job Responsibilities:

- Supporting, configuring and resolving issue on Git and GitHub, including repository management, branching strategies, pull requests, access control, and release governance.
- Built and operated CI/CD pipelines using Jenkins (2.x) with master–agent architecture, handling job creation, user management, build nodes, and parallel builds.
- Deployed enterprise Java applications on Apache Tomcat using WAR files and database scripts across multiple environments.
- Built and maintained Docker images and containers using Dockerfiles for Dev, Accept, and Production environments.
- Automated server provisioning, application deployment, and configuration management using Ansible playbooks, modules, and Shell scripting.
- Managed high-availability clusters and standalone Linux servers, ensuring stability, performance, and security.
- Monitored system and application performance using trend analysis and collaborated with development teams to implement tuning and optimization.

Environment: GIT, GitHub, Agile, CI, CD, Jenkins, Docker, Ansible, Prometheus, Grafana, SQL Server, Shell Scripting, Groovy, YAML, Tomcat, Linux, Jira.

Academic Details:

- **Post Graduation** - M. TECH
  A.P.J. Abdul Kalam Technical University in July, 2010 to June, 2014
- **Graduation** - B.Tech
  Uttar Pradesh Technical University in July, 2006 to June, 2010
- **12th/ Intermediate** – Science (Maths) M.G. Inter College in June, 2006

Place : Ghaziabad
Date : 12/01/2026
