SUBHAJIT BEHERA

Python Developer

subhajit.behera97@gmail.com | +91 8457062256 | linkedin.com/in/subhajit-behera-b228581a0

DevOps Engineer with 4+ years of experience building scalable CI/CD pipelines, automating cloud infrastructure, and streamlining software delivery using tools like Jenkins, CI/CD pipelines, Ansible, Terraform, Kubernetes, Groovy, ArgoCD, CloudFormation and AWS. Reduced manual processes by automating workflows, accelerated deployment speed through optimized CI/CD pipelines, and enhanced system reliability across teams.

CORE SKILLS

Languages: Python, Java, SQL
CI/CD: Jenkins, GitLab, Groovy, Maven, Kubernetes, Dockers, Terraform
Cloud: AWS(IAM, VPC, EC2), Docker, Kubernetes, ArgoCD
Tools: Git, GitOps, Power BI, Django
Testing: Pytest

PROFESSIONAL EXPERIENCE

Fujitsu Research, Bangalore | Sept 2024 – Present

- Developed and integrated a Jenkins pipeline library, streamlining the CI/CD process and promoting code reusability and consistency, reducing code redundancy by 85%.
- Adopted Groovy DSL cutting error rates by 25% and recovery time by 30 mins.
- Directed sanity test execution as part of the CI/CD pipeline, enhancing the reliability and efficiency of the testing process reducing execution time and manual intervention by 70%.
- Strengthened pipeline architecture to support parallel execution of release stages, ensuring isolation and independence between different release cycles. Achieved in a 50% reduction in release cycle time.
- Leveraged code coverage tools and advanced debugging techniques to identify critical build failures by 20% boosting build reliability.
- Initiated a GitOps based pipeline using ArgoCD from scratch, reducing deployment time for developers from overnight builds (~24 hours) to 15 minutes.
- Improved CI/CD pipeline architecture, enhancing cross-team collaboration; modular stages reduced integration issues by 25%, accelerated product releases, and improved quality. Designed an early warning system, cutting error detection time by 80% and boosting system reliability.

Powersoft Global Solutions, Bangalore | Oct 2023 – Sept 2024

- Engineered and maintained Kubernetes, improving deployment times by over 50%.
- Streamlined build and deployment process with Jenkins and Maven, eliminating 85% of manual work.
- Facilitated migration of legacy systems to Python 3, streamlining development workflows and minimized maintenance overhead by 20%.
- Established continuous integration and deployment with GitLab CI/CD, reducing code integration time by 50% and accelerating feature releases.
- Developed interactive web components using JavaScript to enhance user experience and interface responsiveness.
- Automated data validation and dynamic content rendering in front-end modules using vanilla JavaScript.

Maveric Systems, Bangalore | Nov 2021 – Oct 2023

- Planned and deployed Python-based applications using Django, increasing system efficiency by 40% and reducing response times by 50%, enhancing overall user experience and satisfaction.
- Analyzed ORM to improve codebase efficiency, achieving 60% faster query execution.
- Introduced and configured RDBMS/SQL to support a large-scale application, conducting comprehensive integration testing and bug fixes; increased upgrade release efficiency by 40% and cut post-release issues by 30%.
- Architected and operated AWS auto-scaling infrastructure, optimizing resource allocation based on workload demands and improving system efficiency by 30%.
- Defined and maintained modernized CI/CD pipelines for code deployment using Jenkins while automating the deployment process, coordinated in the elimination of 70% of manual work and escalation of work efficiency.

EDUCATION

- North Orissa University | Master in Computer Application (MCA) | Aug 2018 – Nov 2020

ACHIEVEMENTS

- Received ‘Star of the Month’ at Maveric Systems for revamping the code debugging process, introducing 20+ best practices, reducing debugging time by 30%.
