Bengaluru

EDUCATION

SREE VIDYANIKETHAN ENGINEERING COLLEGE, TIRUPATI

2013 - 2017

- Bachelor of Engineering
- GPA: 8.1 / 10.0

SKILLS

- Version Control tools : GIT, GitHub
- Build tools: Maven, Gradle
- CI/CD tools: Jenkins, Github actions, ArgoCD
- Containerization: Docker
- Orchestration: Kubernetes, Yaml, helm, AWS EKS,Azure AKS
- Bug Tracking tools: JIRA
- Networking & CDN: Cloudflare
- Operating Systems: Linux, Rhel, Windows
- Cloud Environment: AWS, Azure, Terraform
- Monitoring tools: CloudWatch, Grafana, Kibana, Datadog
- Configuration Management: Ansible
- Other tools: MongoDB, SonarQube, Confluent, Artifactory(GHCR)
- Programming: Shell Scripting, Python

ABOUT ME

To leverage my skills and experience in cloud engineering to design, automate, and optimize secure, highly available cloud infrastructure, contributing to business innovation, regulatory compliance, and operational excellence at a leading fintech or Retail Technology organization. Seeking to drive impactful solutions using AWS, Azure, and DevOps tools, while continuously enhancing system reliability and scalability in a dynamic, growth-focused environment. Adept at collaborating with development and operations teams to troubleshoot production issues, handle customer escalations, and deliver secure, high-availability solutions aligned with business goals.

WORK EXPERIENCE

Paytm Pvt Ltd (Mar 2021- Nov 2025)

Mishipay India Private Limited (Nov 2025 - Present)

Cloud Operations

- Engineered, deployed, and maintained highly available payment infrastructure for web and mobile platforms using AWS services including EC2, VPC, EKS, ECR, S3, IAM,Storage Services (S3, Glacier and Lifecycle Management policies) and Azure cloud, ensuring seamless digital transactions for millions of users.
- Automated application delivery processes and managed robust CI/CD pipelines using Docker, Kubernetes, and tools such as EKS,AKS for secure, zero downtime deployments and periodic cluster upgrades.
- Conducted advanced troubleshooting, debugging and resolution of infra, platform and payment service issues, both proactively and in response to incidents, ensuring minimal transaction failures.
- Supported real-time, multi-channel payment operations through effective monitoring and alerting using CloudWatch, CloudTrail, Grafana, Datadog, and Linux-based systems, directly enabling prompt issue resolution under PagerDuty on-call support.
- Automated infrastructure provisioning with Terraform, managing AWS resources and Terraform state files.
- Proficient in AWS,Azure public cloud provider services Implemented and managed security best practices, configured IAM policies, and conducted regular audits for compliance, protecting sensitive financial and user data across distributed payment systems.
- Collaborated cross-functionally with SRE and development teams to deliver scalable solutions for web and mobile payments, contributing to key product features and infrastructure improvements affecting millions of daily transactions
- Led end-to-end deployment and migration of payment services to AWS and Azure, using Infrastructure as Code (IaC) with Terraform for repeatable, efficient cloud provisioning and seamless application delivery.

LANGUAGES

- English (Fluent)
- Telugu (Fluent)
- Hindi (Fluent)

PERSONAL DETAILS

PAN DOWPM3323F
DOB 16/10/1995

NATIONALITY : INDIAN

- Automated recurring operational tasks and environment setups with custom scripts and cloud automation tools, significantly reducing deployment time and human error in live payment rollouts.
- Proactively monitored, analyzed, and responded to critical incidents in production environments, improving incident response times and service recovery via effective playbooks and on-call rotations.
- Supported blue-green deployments, canary releases, and zero-downtime maintenance for high-traffic payment applications, ensuring continuous availability for end users.
- Engaged in cross-team planning and root cause analysis following major system events or outages, providing key technical input and driving permanent solutions to infrastructure challenges.
- Contributed to the development, review, and ongoing improvement of security controls, compliance practices, and cloud security documentation for sensitive financial data in a regulated environment
- Gained experience on server-side technologies such as Apache, Nginx, and Redis
- Hold excellent knowledge of common SCM practices, such as branching and code merging
- Used Terraform state management and change plans to audit, preview, and safely roll out upgrades or configuration changes with minimal operational risk
- Managed the real time data pipelines using Confluent Kafka, migrating data from various sources to a centralized analytics platform".
- Demonstrated advanced proficiency in Kubernetes components including Deployments, ReplicaSets, StatefulSets, Horizontal Pod Autoscaling (HPA), KEDA, Ingress controllers, and Services—managing complex multi-tier microservices deployments across production environments
- Spearheaded infrastructure cost optimization initiatives, reducing monthly cloud expenditure by 35% by reducing the number of nodes that are running more than the required by right-sizing resources and created life cycle management policies to clear the old-unused-storages.
