Career Objective

Looking for an innovative and challenging software testing environment where I can develop and utilize my skills and seek opportunities for personal growth, while being productive and profitable for the organization by accepting challenges.

Experience Summary

- **3.4 years** of experience in **Manual testing** and **Automation testing** with Selenium WebDriver.
- Hands on experience in testing Web Based Applications.
- Good Experience in developing the Test Scripts in Automation using **TestNG Annotations**.
- Extensive Experience in **TestNG & Hybrid** framework.
- Knowledge on Reflection, **Page Object model** for Automation Test Scripts.
- Extensive Experience in **Core Java**.
- Experience in executing the test scripts in parallel for **IE, Firefox and Chrome**.
- Good experience **of OOPS concepts, Arrays and String** Class in JAVA
- Hands on experience in writing **all type of Locators(Xpath,CSS,Id…)** for Automation.
- Experience in Manual Testing using **Black Box Technique**.
- Good understanding of Software Development Life Cycle (**SDLC**) and Software Test Life Cycle (**STLC**).
- Actively involved in **Agile** Development process.
- Actively involved in writing test cases by applying **Test Case Design Techniques**.
- Actively involved in **Smoke** testing, **Functional** testing, **Integration** testing and **System** testing and **Regression** testing.
- Extensive knowledge on **Defect, Defect Life Cycle & Defect Tracking**.
- Good Hands on experience in **RestAssured** and **Postman** for APITesting.
- Design and execute API test plans and test cases
- Understanding and validating **API documentation**, including **endpoints**, responses, **payloads**, and **parameters**.
- Working closely with development teams to understand the API design and requirements.
- Worked with all HTTP methods like **GET, POST, PUT, PATCH, DELETE**.
- Validate the **header, cookies, response time, Status codes**.
- Parsed **JSON/XML** response.
- Worker on different Authorization types(**API keys, Bearer tokens**)
  Developed and maintained automated test suites using Rest Assured and Java
- Collaborated with development teams to review **Swagger documentation,** clarify endpoint behavior, and resolve defects ,used **Curl URL.**
- Generated detailed **Test reports** and **Logs.**
- Conducted **regression, smoke** to ensure stability and scalability of APIs across releases**.**
- Good Knowledge on basic **SQL**
- Able to communicate professionally and attend Daily, weekly, and monthly review meetings.

Professional Experience:

- Currently working in **Sysbig Technologies Pvt Ltd,** Bangalore as Software Test Engineer from Aug 2022 to till date.

Educational Details:

- Bachelor of Computer Application with **81.49%** at Rani Chennamma University, Belagavi ,Karnataka.

Technical Skills:

Automation Testing Tool : Selenium Web Driver, TestNG, Hybrid Framework, Maven, GitHub,Postman, RestAssured
IDE : Eclipse
Defect Tracking Tool : Jira
Operating Systems : Windows Family
Programming Languages : Core Java
Database : SQL.

Project Profile:

Project #3

Project Name	:	**TrackZues**
Client	:	TrackZues
Team Size	:	04
Testing type	:	Automation & Manual
Role	:	Software Test Engineer
Tools Used	:	Postman,Maven,Jira,GitHub
Details of Skills used	:	Core Java,RestAssured,&TestNG.

Description:

In this project we are going one step ahead with GPS and going to track a vehicle using GPS and GSM. This Vehicle Tracking System can also be used for Accident Detection Alert System, Soldier Tracking System and many more, by just making few changes in hardware and software. Tracking of vehicle is a process in which we track the vehicle location in form of Latitude and Longitude (GPS coordinates). GPS Coordinates are the value of a location. This system is very efficient for outdoor application purpose. This kind of Vehicle Tracking System Project is widely in tracking Cabs/Taxis, stolen vehicles, school/colleges buses etc.

POST Man Roles & Responsibilities:

- Design and execute API test plans and test cases
- Understanding and validating API documentation, including endpoints, responses, payloads, and parameters
- Working closely with development teams to understand the API design and requirements.
- Working with all HTTP methods like GET, POST, PUT, PATCH, DELETE.
- Validate the response, response time, Status code.
- Validate the response body using JSON parser.
- Utilized Postman to test and validate multiple authorization types (API keys, Bearer tokens) across different request types to ensure security and consistent API behavior.

Rest Assured Roles & Responsibilities:

- Developed and maintained automated test suites using Rest Assured and Java to validate RESTful API endpoints for functionality, reliability, and performance.
- Validated response status codes, headers, payloads to ensure compliance with API specifications.
- Parsed JSON / XML response.
- Performed authentication and to verify secure access control mechanisms.
- Collaborated with development teams to review Swagger documentation, clarify endpoint behavior, and resolve defects.
- Generated detailed test reports.
- Developing Test Scripts and Implemented using TestNG Framework.
- Conducted regression, smoke to ensure stability and scalability of APIs across releases.
- Participated in Agile meetings.
- Used Maven as a Build Management tool.
- Implemented and designed various pages with POM pattern design technique.
- Attending scrum calls and sprint events like sprint planning and retrospective etc.

Project #2

Project Name	:	**Yello Bus**
Client	:	BMTC
Team Size	:	03
Testing type	:	Automation& Manual
Role	:	Software Test Engineer
Tools Used	:	Selenium Web Driver, Maven , Jira , GitHub
Details of Skills used	:	Core Java, Selenium, Hybrid Framework,TestNG.

Description:

Bengaluru Metropolitan Transport Corporation(BMTC) is a state owned public road transport corporation in the Indain city of Bengaluru. It is wholly owned by the Government of Karnataka. It serves the Bengaluru Metropolitan Region. Which aimed to enhance the efficiency and effectiveness of the BMTC bus Trips . The project involved leveraging data analysis, Route optimization, and technology solution to improve the overall computer experience and reduce travel time.

Roles & Responsibilities:

- Preparing test cases as per requirement specification and updating the same in case of any requirement change.
- Understanding the Functional Requirements and Clients Business Workflow.
- Identified and developed automation test scripts using Core Java,
- According to Selenium WebDriver, TestNG and Hybrid framework in eclipse.
- Written Xpath for object identification using various Locators.
- Implemented and designed various pages with POM pattern design technique.
- Developing Test Scripts and Implemented using TestNG Framework.
- Executing Automation Scripts.
- Participated in Agile meetings.
- Used Maven as a Build Management tool.
- Involved in Writing test cases, Writing test scripts, and Executed those test cases.

- Performed, Smoke testing, Integration testing and Regression testing.
- Logging the defect and tracking the defect using JIRA defect tracking tool
- Interacting with Developers for the Issue resolution
- Performing API testing using Postman.
- Automating test cases using selenium and TestNG to test UI. And executing the test cases.
- Attending scrum calls and sprint events like sprint planning and retrospective etc.
- Extensive experience in diversified areas of analysis, design, development, implementation and testing web and enterprise applications using Java.

Project #1 : Profile Right (UK)

Role : Software Trainee
Team Size 5
Description : This application will enable the customers to use the website to maintain customer details online.

The banking application has the following functionalities:

The application enables an user to open an account enable an account to register to use the application, log on to the web site after entering their login details, view their account details, modification of any personal details such as address or phone number, provides utilities such as an interest calculator and a foreign exchange calculator it also enables a user to apply for different kinds of loans such as personal loan, home loan, education loan, auto loan etc.

Roles & Responsibilities:

- Done detailed study of the functional requirements of application.
- Documented QA Test Suites, Test Cases, Test results and defects using Quality Centre Creating Test Cases after analyzing the BRD's.
- Involved in manual testing of some use cases which were not automated.
- Fixed bugs in internal automation scripts written in Java.
- Analyzing the Regression test results and reporting the results.
- Maintained team co-ordination while performing root cause analysis for critical bugs.
- Performed defect logging and tracking using Jira Tool.
- Involved in retesting the application after defect fix.
- Attended the defect review meeting to resolve the issues.

I hereby declare that the information furnished above is true to the best of my knowledge.
