CAREER OBJECTIVE

DevOps Engineer with 4+ years of experience in building and optimizing infrastructure for performance and reliability. Skilled in scripting, Infrastructure-as-Code, and automation, with a proven ability to enhance environments and drive team efficiency. Strong problem-solver committed to delivering scalable, innovative solutions aligned with business goals.

EDUCATION

Bachelor of Engineering in Civil (2021)

National Institute Of Engineering,Mysore (VTU)

SKILLS

- **Containerization** : Kubernetes , EKS, Docker
- **Cloud** : AWS, Azure
- **Config Management** : Ansible
- **IAC**: Terraform
- **CI/CD** : Jenkins
- **Code Quality** : SonarQube
- **Artifactory** : Jfrog
- **OS** : Linux, Ubuntu,Windows
- **SCM Tools** : Git , Bitbucket
- **Scripting** : Shell Script, Python
- **Web Server** : Tomcat , Nginx, Httpd
- **Monitoring Tools** : Grafana Prometheus , Cloudwatch
- **Other** : Jira, MySql
- **Project Management**: SCRUM, Agile.

WORK EXPERIENCE

DevOps Engineer

Coforge | Aug 2021- Present

TECHNICAL PROFILE

- ✅ 4+ years of hands-on DevOps experience in automating CI/CD workflows, container orchestration, and cloud infrastructure management across AWS and Azure.
- 🚀 CI/CD Automation using Jenkins, integrated with GitHub, Maven, and SonarQube to streamline build, test, and deploy stages.
- 🐳Strong expertise in Docker for containerization and Kubernetes (EKS) for deploying and managing scalable microservices.
- 🎯 Proficient in writing and managing Helm charts and Kubernetes YAML manifests for seamless application onboarding and versioned deployments.
- ☁️ Hands-on experience with AWS (EC2, S3, VPC, RDS, Lambda, IAM, CloudWatch) and Azure (VMs, Azure DevOps, Blob Storage, AKS, Resource Groups).
- 🛠️ Skilled in Terraform and ARM templates for Infrastructure-as-Code on AWS and Azure.
- 🔧Experienced in Ansible for configuration management and automating environment provisioning and application setup.
- 📁Managed Git repositories, enforced pull request policies, branch protection rules, and integrated with Azure Repos for enterprise-grade control.
- 🔄Active contributor in production deployments, hotfix rollouts, and cross-cloud environment troubleshooting .

PROJECTS

COFORGE, **Bengaluru**
Project 2
Client: Schneider Electric
Roles: DevOps Engineer
Period: Dec 2023 to till date
Environment: Kubernetes, Docker, AWS, Ansible, Git, Jenkins, SonarQube & Terraform.

Roles an Responsibilities:

- Server-related tasks like managing EC2 instances, creating AMIs, snapshots, changing instance types, Key Pairs, and creating new instances from AMIs.
- Storage-related tasks like disk addition, increase, and decrease of existing disks using EBS have been worked on in the S3 bucket to store data.
- Network-related tasks like the setup of a VPC, subnet, Routing Table, Security Groups, and Elastic IP.
- Worked on Kubernetes and created on-premise and EKS clusters from scratch.
- Implemented and managed Ingress controllers for Kubernetes Clusters, enabling external access and load balancing for applications.
- Managed PODs to manage containers and deployments using Kubectl while working on the Kubernetes Cluster.
- Creating definitions for manifest files for various K8s components, such as configmaps and secrets.
- Application-specific features including Ingress, ClusterIP, NodePort, and LoadBalancer expose.
- Worked on various Blue-Green-Canary, Rolling Update, and other Kubernetes deployment strategies.
- Used Helm charts and Kubernetes YAML for updating, scaling, and deploying applications.
- Implemented and managed Ingress controllers for Kubernetes clusters, enabling external access and load balancing for applications.
- Creating and Managing AMIs, Snapshots, Volumes, upgrades, and downgrades of AWS resources (CPU, Memory, and EBS).
- Created S3 backups using versioning enablement and moved objects to Amazon Glacier for archiving purposes.
- Hands-on experience in Creating VPCs, Subnets, Route tables, Internet Gateways, NAT, NACL, etc for a new environment.
- Ensuring the timely installation of Security patches, service packs, and updates to keep Windows systems up-to-date and secure.
- Identifying and resolving database-related issues, such as connectivity problems, data corruption, and performance.
- We used Terraform to create multiple resources, such as VPC, EC2, and S3, in AWS

PROJECTS

Project 1 : Supernova agent- Customer Experience support
Client : Adobe
Period : Aug 2021 to Nov 2023
Environment: Kubernetes, Docker, AWS, Azure, GIT, Jenkins, SonarQube & Shell Scripting.
Roles and responsibilities :

- Implemented Kubernetes RBAC (Role-Based Access Control) to restrict access based on team roles, ensuring secure multi-tenant cluster usage.
- Automated Kubernetes cluster upgrades using kubeadm with zero downtime and proactive monitoring for node failures.
- Optimized Docker images using multi-stage builds to reduce image size and improve container startup times.
- Integrated Docker image vulnerability scanning (Trivy, Clair) into CI/CD pipelines to enforce security compliance.
- Automated AWS infrastructure provisioning using Terraform for EC2, VPC, RDS, and S3 with version-controlled configurations
- Designed and implemented AWS Auto Scaling with ELB to ensure high availability and optimal resource utilization.
- Designed a Git branching strategy (GitFlow,) to streamline feature releases and hotfixes across environments.
- Integrated Jenkins with SonarQube and Nexus for automated code quality checks, dependency management, and security scans.
- Built dynamic Jenkins agents on Kubernetes to scale CI/CD pipelines based on workload demand.
- Developed Shell scripts for automated log rotation and system cleanup to prevent disk space issues Wrote Python automation scripts to manage AWS resources (EC2, S3, Lambda) and trigger infrastructure alerts.
- Implemented monitoring and alerting with Prometheus and Grafana, visualizing real-time metrics for proactive issue resolution deployments and troubleshoot issues.
- Automated infrastructure provisioning using Terraform and Ansible, managing cloud resources efficiently across AWS and Azure.
- Developed and maintained CI/CD pipelines with Jenkins, integrating with Git for automated builds, testing, and deployments.
- Monitored and optimized system performance using Prometheus and Grafana, setting up proactive alerting and dashboards.

SKILLS

I hereby declare that the above furnished information is true to the best of my knowledge.

Yours Sincerly
