Priyanka MN

AI LEAD

+91 9980553961 mnpriyanka0910@gmail.com **LinkedIn**

SUMMARY

Passionate and results-driven **AI Lead** with over 8 years of industry experience, including 4+ years focused on delivering high-impact solutions in **Generative AI.** Proven expertise in leveraging **Azure AI, OpenAI GPT models, and LangChain** to architect and deploy end-to-end machine learning systems that solve complex, real-world problems.

Holds a Master's in Data Science & Artificial Intelligence, with hands-on experience developing **RAG pipelines** and working extensively **with Large Language Models (LLMs).** Strong communicator with a demonstrated ability to translate advanced technical concepts into measurable business value across **fintech**, **healthcare, and manufacturing** domains.

SKILLS

Languages: Python, SQL
AI/ML Frameworks: Scikit-learn, TensorFlow, HuggingFace, LangChain, Langfuse, OpenAI GPT-4/mini, Microsoft Azure Gen AI Services, Gen AI
DevOps/MLOps: Docker, Kubernetes
Cloud Platforms: Azure
Tools & Libraries: FastAPI, Pandas, NumPy, Flask, GitHub
Techniques: RAG, Prompt Engineering, NLP, LLM, Classification

WORK EXPERIENCE

CGI

Technical Lead – WEBI to PowerBI Report Conversion Automation **Oct 2025 – Present**
Client: CGI Advantage

- Led the **architecture and development** of an AI-driven BI modernization platform automating SAP Business Objects (WEBI) to Power BI RDL migration using Python, Azure OpenAI API, and scalable ETL pipeline design.
- Architected LLM-based formula translation engine (WEBI → DAX) leveraging **Generative AI, prompt engineering for Generative AI**, and structured JSON parsing to intelligently convert calculated fields, aggregations, and report variables with intelligent business logic transformation (**85%+ accuracy**).
- Engineered dynamic RDL generation engine with namespace handling, metadata-driven template intelligence, parameter mapping, LOV (List of Values) integration, and automated dataset transformation using **prompt-optimized Azure OpenAI** for schema analysis and validation.
- Enabled enterprise-scale batch processing with memory optimization, intelligent error handling, and robust validation, reducing manual migration effort by ~70–80% and accelerating legacy BI conversion timelines for complex multi-tab financial and HR reports.
- Developed production-grade audit logging, observability framework, and comprehensive governance validation to ensure traceability, data integrity, compliance, and deployment readiness across 15+ legacy BI systems (FIN, HRM, APT domains).

Azure AI Engineer - Intelligent Chatbot Development **Jun 2025 – Sept 2025**
Client: Trex

- **Developed** a **POC intelligent chatbot** using **Azure AI** Studio to enhance self-service support for Trex customers.
- Integrated **Azure** Cognitive Services and **OpenAI GPT** models to enable contextual responses from brochures, warranty cards, and documentation.
- **Enabled** customers to check order status and warranty claims through a **conversational interface**, reducing support tickets by **40%**.

- **Built embedding pipelines** for document ingestion and retrieval using **RAG** (Retrieval-Augmented Generation).
- **Improved chatbot** accuracy by training on FAQs and warranty claim history, achieving **80%+** precision in real-time responses.
- **Delivered** user **analytics dashboards** to monitor **chatbot performance** and identify improvement areas.
- **Collaborated** with **UX** and customer service teams to refine conversational flow and user experience.
- **Validated** solution scalability through **Azure's** serverless architecture and presented findings to stakeholders.

Data Scientist – Auditor Virtual Assistant (AVA) **Nov 2022 - May 2025**
Client: Pulse Proper Pay

- **Engineered** an **AI-based assistant** for analyzing medical discharge summaries using **GPT-4o** and BERT embeddings.
- Applied **RAG** pipeline architecture to combine real-time retrieval with generative outputs for accurate document parsing.
- **Trained** domain-specific **NLP** models for discharge summary classification, entity extraction, and risk assessment.
- **Implemented** Airflow **DAGs** for automating data ingestion, processing, and inference pipelines.
- **Integrated fairness** and Responsible **AI** (RAI) principles to ensure model transparency and accountability.
- **Designed** scalable **FastAPI** services to deliver AI capabilities as microservices within hospital audit workflows.
- **Enabled cross-document** insights by developing embedding-based similarity scoring and classification logic.
- **Enhanced document processing** speed and **accuracy,** reducing manual effort by over **60%.**

SLK Software, Data Scientist – AutoML Platform. **Sep 2021 - Dec 2022**

- **Designed** and **developed** a proprietary **AutoML platform** to **automate the full machine learning lifecycle**, from data preprocessing to model deployment.
- **Leveraged Azure AutoML** to streamline model selection, hyperparameter tuning, and performance evaluation,reducing development time by **50%**.
- **Enabled business** users to **build ML models** with minimal technical intervention, improving accessibility and speed of **AI** adoption across teams.
- **Integrated** advanced monitoring features to track **model accuracy**, drift, and versioning post-deployment.
- **Delivered reusable pipelines** for data ingestion, **feature engineering**, and inference using **Python** and **Azure ML SDK.**
- **Collaborated** with business analysts and engineers to align **ML outputs** with business goals, **improving stakeholder satisfaction** and **decision making.**

Infosys, Data Engineer – MTrack (Client: Dell) **Dec 2014 - Jul 2015**

- **Developed** a **web-based tracking system** for hardware lifecycle management at **Dell**.
- **Built ETL pipelines** to extract and manage **hardware inventory**, shipment, and maintenance schedules.
- **Ensured** seamless **front-end** to **back-end integration** across modules.
- **Reduced** ticket resolution time **through real time visibility** into **material movement** and status.

Wipro **Sept 2011 - Nov 2014**

.Net Developer – SI Web

- **Designed** custom dashboards using **Web UI** to **track revenue, cost,** and **effort KPIs**.
- **Created automated reports** for **project-level financial** metrics across business units.
- **Integrated backend logic** to compute margins and **delivery efficiency per account**.
- **Collaborated** with finance teams to **enhance dashboard usability** for non-technical stakeholders.
- **Enabled predictive insights** using **statistical models** on project spend vs budget.
- **Improved decision making** by implementing data-driven exception alerts.
- **Played a key role** in **migration** and **testing** during global system upgrades.

CC Tool – Customer Feedback Platform

- **Built feedback capture workflows** for customer satisfaction tracking across **Wipro accounts**.
- **Developed reporting features** to **visualize enhancement requests**, pain points, and action items.
- **Mapped** client feedback to **project-level outcomes**, aiding strategic delivery planning.
- **Integrated survey tools** and **analytics APIs** for real-time **feedback scoring**.
- **Partnered** with **delivery managers** to optimize service based on **feedback analysis**.
- **Maintained audit logs** and history tracking for continuous **improvement**.

ACHIEVEMENTS

- Designed and deployed an intelligent **Azure-based chatbot** for Trex, enabling order tracking and warranty queries via conversational AI, reducing support tickets by **40%**.
- Built AVA (Auditor Virtual Assistant) using **GPT-4o** and BERT embeddings to extract and summarize key information from medical discharge summaries, cutting audit analysis time by **60%**.
- Developed a **RAG**-powered Financial Anomaly Detection system using Google Gemini LLM and Neo4j Knowledge Graphs, improving financial rule validation efficiency by **70%**.
- Engineered a robust **AI** Lifecycle Management platform with **Langfuse**, introducing real-time prompt tracking and version notifications, enhancing reliability in **GenAI** workflows.
- Reduced **ML** deployment cycles by **50%** through the design of an AutoML platform using Azure AutoML and **Python** at SLK Software, enabling no-code AI for business users.
- Built end-to-end FastAPI services integrated with **Azure OpenAI** and Airflow for scalable deployment of AI models in production environments across CGI projects.
- Improved model accuracy and relevance in multiple domains by combining retrieval-based methods with **GPT-4** generative models in chatbot and document intelligence use cases.

EDUCATION

Liverpool John Moores University **2024 - 2025**

Master's in Data Science & Artificial Intelligence

IIIT Bangalore + VTU **2020 - 2021**

PG Diploma in Data Analytics

Visvesvaraya Technological University (VTU) **2007 - 2011**

Bachelor's in Information Science Engineering
