Srikant Verma

Chennai, Tamil Nadu, India srivm318@gmail.com 769-598-3393

SUMMARY

Java Tech Lead with 10+ years of experience building scalable microservices and cloud-native applications. Skilled in solving real-world customer problems, improving system efficiency, and leading Agile teams in fast-paced environments.

EXPERIENCE

Java Tech Lead

Marriot **Nov 2023 – Present, Chennai**

- Developed **Spring Boot 3.x** / Java 21 **microservices** with **REST API**s for real-time customer risk scoring and digital-key eligibility.
- Implemented **Kafka event stream**s for ingesting reservation, loyalty, and fraud data; built consumers with retry, backoff, and dead-letter handling.
- Integrated **Redis caching** for profile lookups and precomputed scores, reducing DB latency and improving throughput.
- Used Resilience4j (**circuit breaker, rate limiter, bulkhead**) for resilient communication with external identity, fraud, and loyalty services.
- Designed optimized **PostgreSQL** schemas, added composite indexes, and used multithreading to process large customer histories under 200ms.
- Built async workflows using **CompletableFuture & parallel streams** for high-volume risk calculations.
- Added full observability with custom **Grafana dashboards, and Splunk** log pipelines for production monitoring.
- Containerized and deployed using **Docker, Kubernetes (AKS), Helm**, and automated CI/CD pipelines (**Jenkins/GitHub** Actions).
- Improved code quality via **SonarQube**, API contract tests, and extensive unit/integration tests using **JUnit 5** & **Mockito.**
- Led **offshore/onshore team**, provided design reviews, and enforced coding standards for microservices best practices.

Java Tech Lead

Adobe **July 2020 – Nov 2023, Chennai**

- Developed new APIs under various **Microservices** to support customer dashboard, bill payments, enrollments.
- Developed GraphQL api using **Apollo GraphQL framework** on top of Springboot framework, created GraphQL schemas to generate query and mutation.
- Created **Reusable Modules** and Custom Api's in Springboot framework using Java8 which got used in various places of application using RAILS concept.
- Extensively used core java concepts like **Multithreading**, Collections Framework, File I/O, and concurrency.
- Used Java8 features in developing the code using **Lambda expressions**, creating resource classes, fetching documents from database.
- Exposing **Java Message Service** (JMS) queues to handle communication with clients and ensure asynchronous processing.
- Utilizing **Redis** for caching to enhance performance and reduce response times.
- Employing **Kafka** for event-driven communication between microservices, ensuring seamless data flow.
- Deployed applications into **Continuous integration environments** like Jenkins to integrate and deploy code on CI environments for development testing.
- Lead the team to resolve sonar code smells, Fortify vulnerabilities, Blackduck scans.
- Implemented Rest Template pooling, **Circuit Breaker**, Redis Cache to improve performance of **dashboard** api.

Lead Consultant -Technology

Polaris **March 2020 – July 2020, New York, USA**

- Involved in understanding the end-user requirements and business processes in creating and designing universes, queries, and reports.
- Created Microservices using Spring Boot framework and Java 7/8.
- Comprehensive knowledge of physical and logical data modeling, performance tuning and monitoring.
- Extensively used **Hibernate annotation**s for exception handling checks.
- Used Spring MVC framework and integrated it with Hibernate.
- Implemented the application using the concrete principles laid down by several Java/J2EE Design patterns like MVC, Session Facade, and Singleton.
- Used **Web Services-SOAP calls** for getting credit card information from third party.
- Developed test cases on **JUnit's** using Mockito framework.
- Used **Log4J** for logging and tracing messages.

Senior Java Developer

TCS **March 2018 – March 2020**

- Developed RESTful microservices using **Spring Boot**, applying MVC design principles and clean architecture.
- Built a **batch processing system** using **Java multithreading** for transactional updates across large datasets.
- Implemented **JMS-based async communication**, integrated **Redis** for caching, and optimized **MongoDB** collections.
- Wrote unit and integration tests using **JUnit** and **Mockito**; enforced code quality with **SonarQube** and security with **Black Duck**.
- Enabled service discovery with **Eureka**, logging with **Log4J**, and real-time monitoring via **Splunk**.
- Deployed microservices to **PCF** with automated CI/CD pipelines; used **Git** and **JIRA** for version control and Agile tracking.

Java Developer

Tech Mahindra Ltd **December 2013 – March 2018**

- Involved in Full Cycle Software Development from Analysis through Design, Development, Integration and testing phases.
- Developed various J2EE components like **Servlets**, **JSP**, JSTL, AJAX, SAX, XSLT, JAXP, JNDI, LDAP, JMS, and MQ Series by using RAD.
- Integrated Spring (Dependency Injection) among different layers of an application.
- Developed various applications using **core java**, **struts framework,** multithreading concepts.
- Designed the application by implementing JSF Framework based on **MVC Architecture**, simple JavaBeans as a Model, JSP and JSF UI Components as View and Faces Servlet as a Controller.
- Implemented Java EE components using Spring MVC, Spring IOC, Spring transactions and Apache CXF modules.
- Used Core Java concepts like **Collections**, **Multi-threading**, **Exception handling**, IO to develop business logic.
- Developed DAO's for retrieving and fetching the data from DB2 database using Spring JDBC.
- Tested web services using Postman tool in JSON format.
- Worked on JUnits, sonar code fixes for improving the code quality.

EDUCATION

Master of Computer Application (MCA)

DG Vaishnav College • Chennai, India • 2013

Bachelor of Computer Application (BCA)

Ramakrishna Mission Vivekananda College • Chennai, India • 2010

CERTIFICATIONS

Microsoft Certified Azure Fundamentals (AZ-900)

Microsoft Certified Data Fundamentals (DP-900)

Microsoft Certified AI Fundamentals (AI-900)

2025

SKILLS

Languages: Java (8–21), Shell Scripting
Frameworks: Spring Boot, Spring MVC, Spring Cloud, Hibernate, JPA
Architecture: Microservices, REST, GraphQL, Circuit Breakers (Resilience4j, Hystrix)
Messaging: Kafka, Kafka Streams, JMS, RabbitMQ
Databases: PostgreSQL, MySQL, MongoDB, Redis, Cassandra
Cloud: AWS, Azure, GCP, OCI, PCF – deployments using Kubernetes, Docker, Helm
DevOps: Jenkins, GitHub Actions, GitLab CI/CD, Helm
Monitoring: Grafana, Prometheus, Splunk, ELK Stack
Testing: JUnit 5, Mockito, WireMock, Testcontainers, Postman
Tools: Git, GitHub, GitLab, SonarQube, Fortify, Black Duck, Jira, Confluence
Performance: Multithreading, CompletableFuture, Caching, Rate Limiting, Thread Pools, Connection Pooling
