VIGNESH KUMAR AP

Email: apvigneshkumar@gmail.com
Phone: +91 9943576658
Location: Bengaluru, India
LinkedIn: https://www.linkedin.com/in/ap-vignesh-kumar/

PROFESSIONAL SUMMARY

10+ years specialized in application development and backend engineering with 15 years of total professional experience, designing and building highly scalable backend systems, modernizing legacy platforms, and integrating AI tools in engineering workflows. Expertise in reviewing system architectures, monitoring production systems, and mentoring engineering teams. Specialized in microservices, event-driven architectures, and cloud-native solutions.

TECHNICAL SKILLS

Programming Languages: Java, Golang

Backend Technologies: Spring Boot, Spring Security, Spring Data JPA, JakartaEE, Hibernate, Microservices Architecture, REST APIs, gRPC, Message Queues, Event-Driven Architecture

Cloud & Infrastructure: GCP, Azure, Kubernetes, Docker, Apache Kafka, Container Orchestration

Databases & Storage: MySQL, Oracle, MongoDB, Apache Solr, Redis, BigTable, NoSQL, Database Design, Query Optimization

DevOps & Monitoring: Jenkins, CI/CD Pipelines, LGTM Stack (Loki, Grafana, Tempo, Mimir), Prometheus, VictoriaMetrics, Sentry, Firebase, BigQuery

AI Tools & Models: GPT, Sonnet, Gemini, NLP, MCP, Aider, Agentic AI tools, Prompt Engineering

---

PROFESSIONAL EXPERIENCE

Lead Backend Engineer | Glance (InMobi Group)
Dec 2021 - Nov 2025

Backend Architecture & Product Engineering

- Led the development of "Spaces", an event-driven content platform deployed across India and the US, currently serving 5 million users with infrastructure designed to scale to 100 million
- Designed and maintained real-time content pipelines using Java, Spring cloud,Kafka and gRPC, achieving a 20x latency reduction and enabling high-throughput,delivery of personalized content

- Played a core role in "Highlights" backend services, ensuring low latency and resilient systems architecture supporting millions of devices and around 50K QPS
- Contributed to infrastructure cost optimization by identifying and decommissioning unused services and transitioning workloads to spot instances
- Worked closely with product and engineering teams to align feature delivery with strategic roadmap goals

AI Platform Engineering

- Built Observa, a Golang CLI and IntelliJ plugin powered by LLMs like GPT-3.5-turbo and Gemini, to auto-generate LGTM observability stacks for Spring Boot repositories
- Developed an AI report generation framework by integrating Claude desktop with a suite of internal MCPs, enabling automated analysis and summarization of application health metrics

Infrastructure & Platform Engineering

- Built an internal mobile device farm with 20+ devices to support continuous testing with 70+ device hours/day
- Architected Fleet CT Platform: GitHub webhooks → Jenkins → Kubernetes → device infra with automated PR gating
- Created a unified Golang logging library that integrates structured logging and automatic error reporting to Sentry
- Engineered a real-time alerting system using Firebase and BigTable for various end-user applications
- Led initiatives that reduced Android build times by 40% through build pipeline optimizations

Principal Engineer | Pramati Technologies (Acquired by Accenture - July 2021)
Mar 2015 - Nov 2021

Backend Development & Platform Engineering

- Led the team of 5, designed and developed Raven, a test management and analytics platform built with Java, Spring Boot, SQLite, HighCharts, and TypeScript
- Built a live database query service with web UI, enabling users to execute SQL queries directly on production databases for real-time data analysis
- Built end-to-end validation systems across web, REST APIs, mobile, and database layers
- Developed cloud-integrated test automation platforms using Java, Python, and Ruby across AWS, BrowserStack, and SauceLabs

Senior Software Engineer | Oracle India
Apr 2012 - Feb 2015

- Automated Oracle Fusion mobile applications and built REST API test frameworks
- Designed batch processing and backend automation tools

Software Engineer | IBM India
May 2010 - Mar 2012

- Specialized in NetApp storage performance, enterprise system validations, and built test automation frameworks for performance benchmarking

---

KEY ACHIEVEMENTS

- **Scale Impact:** Built platforms serving 5M+ users with systems designed to scale to 100M+ users using high-throughput, low-latency architectures
- **Performance Optimization:** Achieved 20x latency improvements in real-time pipelines and reduced Android build times by 40%
- **Cost Optimization:** Delivered measurable cloud cost savings through intelligent workload management and infrastructure optimization
- **AI Innovation:** Pioneered AI integration in backend workflows, building internal tools and frameworks leveraging LLMs for observability
- **Platform Innovation:** Delivered scalable solutions and infrastructure optimizations that significantly improved system performance

---

EDUCATION

Master of Science in Software Systems
BITS Pilani | 2012 - 2014 | CGPA: 7.56

Bachelor of Engineering in Computer Science
Thiagarajar College of Engineering | 2006 - 2010 | CGPA: 8.65

AWARDS & RECOGNITION

- Multiple Emmy Awards - Glance (2022-2024) for technical innovation and platform scale
- Star Awards - Glance (2021-2024) for engineering excellence
- Star Employee of the Year - Imaginea (2015)
- Consistent awards across organizations for platform innovation
