Summary

Results-driven **Backend Developer** with 3 years of experience delivering scalable and secure server-side applications using the **MERN stack and FastAPI**, with deep expertise in **Dockerized deployments** and **AWS cloud infrastructure**. Proficient in managing the full **Software Development Life Cycle (SDLC)** — from requirement gathering and system design to deployment and maintenance. Strong track record in building **RESTful APIs**, implementing **CI/CD**, and automating cloud provisioning with **Terraform**. Skilled in building microservices architectures and real-time systems while ensuring high availability, performance, and security across all environments.

Technical Skills

Languages:	**JavaScript, Python**
Frameworks:	**Node.js, Express.js, Flask, FastAPI, RESTful APIs, Mongoose**
Databases:	**MongoDB, PostgreSQL**
DevOps & Tools:	**Docker, Kubernetes, Terraform, GitLab CI/CD, Jenkins, Git, Linux**
Cloud Platforms & Services:	**AWS (EC2, ECS, Lambda, ALB, EKS), Firebase, Cloudinary**
Monitoring & Logging:	**Prometheus, Grafana, Loki**

Work Experience

Nable Invent Solutions **Apr 2023 – Present**
Software developer

- Developed and maintained **RESTful APIs** using **Node.js** and **FastAPI** to power scalable backend services.
- Designed and optimized **MongoDB schemas** using **Mongoose, Beanie** enabling efficient, indexing, and data integrity.
- **Dockerized** backend applications and services, ensuring consistent environments across local development, staging, and production.
- Designed and integrated backend logic for critical features including **user authentication, role-based access control (RBAC)**, real-time booking, and secure payment processing using **Stripe** and **Razor Pay**.
- Leveraged AWS services (EC2, Lambda, ALB, S3) to deploy containerized microservices with 99.9% uptime and auto-scaling support for 2x traffic spikes.
- Built **CI/CD** pipelines using **Jenkins**, **Docker**, **SonarQube**, and **Trivy**, reducing deployment time by 60% and improving code quality coverage by 30%.
- Applied **Infrastructure as Code (IaC)** with **Terraform**, reducing manual provisioning by **60%**.
- Implemented **Kafka/Redis** for real-time event streaming and message-driven communication between microservices.
- Strong understanding of **Agile** methodologies and the **software development lifecycle (SDLC).**
- Developed backend monitoring and alerting using **Prometheus**, **Grafana**, and **Loki**, improving system observability and incident response.
- Integrated **OpenAI's NLP** models with a **RAG**-based workflow to enhance the accuracy and relevance of customer-specific insights and recommendations.

Project

AI Resume Reviewer

- **Designed and developed an AI-powered Resume Review platform** using **FastAPI** and **React.js**, enabling automated ATS compatibility checks, resume scoring, and AI-driven content improvement suggestions.
- **Integrated OpenAI/Gemini NLP models** to generate personalized insights and role-based responsibility recommendations, enhancing functionality and user engagement across the application.
