PROFESSIONAL SUMMARY

Staff-level Senior Software Engineer with 11+ years of experience designing and delivering **secure, scalable, and resilient enterprise applications** using **Java, Spring Boot, and ReactJS**. Strong background in **distributed systems, microservices architecture, event-driven design, and cloud-native development on AWS**. Hands-on experience across the **full Software Development Life Cycle (SDLC)**, including system design, development, testing, deployment, and operational stability. Proven ability to build **high-quality production code**, optimize data-intensive systems using **SQL/NoSQL databases**, and apply **application resiliency, CI/CD, and security best practices**. Experienced in collaborating within **agile teams**, mentoring engineers, and driving continuous improvement through data-driven insights and modern engineering practices.

CORE TECHNICAL SKILLS

Backend: Java, Spring Boot, Microservices, Hibernate, RESTful API Development, Kafka, Tomcat
Frontend: ReactJS, Redux, JavaScript, TypeScript, Angular, CSS, jQuery
Databases: PostgreSQL, MySQL, SQL, NoSQL
Cloud & DevOps: AWS, Docker, Logging & Monitoring Systems
Other: OOP, System Design (LLD/HLD), Performance Engineering, Agile, JUnit, Mockito, DevOps

PROFESSIONAL EXPERIENCE

Senior Software Engineer II

Anthology

Jul 2020 – Present

- Designed, developed, and maintained **scalable and resilient backend systems** using **Java, Spring Boot, Hibernate, and microservices architecture**, supporting high-availability enterprise SaaS platforms.
- Designed and implemented Kafka-driven, event-based architectures to decouple services and enable scalable, asynchronous processing for high-volume workflows, while building fault-tolerant consumers with retry strategies, idempotent processing, and optimized consumer group configurations to ensure reliable message delivery at scale.
- Applied deep understanding of SQL optimization, query tuning, and relational database management (PostgreSQL, MySQL) to improve throughput and reduce latency.
- Led a 12-member cross-functional engineering team, owning system design, execution, and delivery while mentoring engineers through code reviews, design discussions, and architectural guidance.
- Collaborated with **cross-functional teams** (QA, Product, UX, TPM) to clarify requirements, scope features, and deliver end-to-end solutions.
- Mentored and coached junior engineers, improving team standards for design, coding, and testing practices.
- Leveraged GenAI coding assistants (GitHub Copilot) to enhance productivity, validate implementations, and maintain high-quality code.
- Participated in architecture and design reviews, providing input on functional/non-functional requirements, resilience patterns, and performance optimization.

Technology Analyst

Infosys

Jul 2017 – Jul 2020

- Delivered scalable full-stack solutions using React and Java SE/EE aligned with OOP standards and modular application design.
- Developed configurable UI components to support reusability and faster development cycles.
- Built an automated framework to extract and process Excel data, improving operational efficiency and delivering **annual savings of ₹8 lakhs**.
- Developed comprehensive unit tests with JUnit and Mockito, maintaining **90% test coverage** and improving reliability across services.

Software Engineer

Wondersoft Pte Ltd.

Aug 2014 – Jul 2017

- Designed a reusable web application template that improved workflow execution and operational efficiency by **30%**.
- Delivered full-stack solutions across logistics, eLearning, and eCommerce domains, supporting diverse business requirements.
- Built an end-to-end tracking system for Adidas ASN, improving logistics throughput and contributing to a **25% increase in customer satisfaction**.

EDUCATION

Scaler (2025)
Specialization: Software Development & Problem Solving
Bachelor of Engineering | Sri Krishna College of Technology (2013)

ADDITIONAL STRENGTHS

- System Architecture | API Development | Full-Stack Engineering | Performance Optimization | Code Quality | Agile Delivery | Team Collaboration | Technical Mentorship
