V VIGNESH

LEAD FULLSTACK DEVELOPER | CLOUD-NATIVE ENGINEER | TECHNICAL LEADERSHIP

+91-8870655769 | CHENNAI, TAMIL NADU, INDIA | VIKIEFY@GMAIL.COM | HTTPS://WWW.LINKEDIN.COM/IN/VIGNESH-VIKI-B5172458/

Objective

Full Stack Java Developer with 10+ years of experience in designing, developing, and leading enterprise-grade applications using **Java, Spring Boot, Microservices, Angular**, and **cloud-native platforms**. Strong hands-on expertise in **Docker-based containerization** and **Kubernetes orchestration (CaaS)**, along with extensive experience across **PaaS and SaaS models** on **GCP, AWS, and PCF**. Skilled in **system design, cloud migration, performance optimization, and technical leadership**, with a proven track record of delivering **scalable, secure, and high-availability solutions**. Seeking a role where I can leverage my **full-stack and backend expertise**, **cloud-native architecture skills**, and **mentoring capabilities** to drive digital transformation and build high-performing engineering teams.

Technical Skillset

Programming Languages: Java, JavaScript, PL/SQL
Backend Technologies: Spring Boot, Hibernate, JPA, Struts 2, J2EE
Frontend Technologies: Angular, jQuery, HTML, JSP
Databases & Query Languages: SQL, MySQL, Oracle
Web Services & APIs: RESTful APIs, SOAP, RMI
Cloud Platforms: Google Cloud Platform (GCP), Amazon Web Services (AWS)
Deployment & Runtime: OpenShift, PCF (Pivotal Cloud Foundry), Apache Tomcat, Glassfish, Oracle i-plant
Messaging & Caching: Kafka, RabbitMQ, Google Cloud Pub/Sub, Redis
Build & Version Control: Maven, Gradle, Ant, Git
Monitoring & Logging: Splunk, Dynatrace, New Relic, Log4j
Architectural Styles & Principles: Microservices Architecture, Event-Driven Architecture, Monolithic Architecture, Distributed Systems, Domain-Driven Design (DDD), Inversion of Control (IoC), Dependency Injection (DI)
Design Patterns: Gang of Four (GoF) Patterns (Creational, Structural and Behavioral)
Methodologies & Soft Skills: Agile Scrum, System Design, Problem Solving, Team Mentoring

Experience

FORD MOTOR COMPANY, Chennai | Technical Architect | June 2021 – Present

- **Architected and led** the end-to-end High-Level (HLD) and Low-Level (LLD) design for **5+ critical microservices** within a core scheduling and sequencing platform, applying MACH principles (Microservices-based, API-first, Cloud-native, Headless) to ensure high scalability, composability, and maintainability.
- **Integrated** advanced security tools (Checkmarx, Cycode), quality gates (42C, Fossa), and the Apigee API Gateway across **multiple services**, significantly enhancing security posture and streamlining API management.
- **Designed and implemented** scalable CI/CD pipelines and cloud infrastructure on **GCP & PCF**, architecting container-based deployments with **Docker** and **Kubernetes (OpenShift CaaS)**, resulting in a **60% reduction** in release cycles.
- **Led performance optimization** initiatives for legacy applications, resulting in an **80% reduction in response times** and a **75% improvement in throughput**.
- **Provided technical leadership** and mentorship to a team of **20 developers**, driving Proof-of-Concept (POC) analysis and development for emerging technologies, leading to the adoption of event-driven microservices, GCP Dataflow, Informatica.
- **Technologies:** Java, Spring Boot, GCP, MySQL, Kafka, PCF, OpenShift, Angular, Informatica.

CAPGEMINI, Chennai | Consultant | April 2019 – May 2021

- **Provided critical Level 2/3 production support** for high-volume financial applications (Mastercard domain), ensuring **99.9% uptime** and rapid incident resolution within strict SLAs.
- **Developed and implemented** key Change Requests (CRs) and an internal automation tool, enhancing operational efficiency and **reducing manual effort by 20 hours/week**.
- **Managed application deployments** and optimized memory utilization for critical applications, improving stability and **resource efficiency by 100%**.
- **Optimized backend batch processes**, reducing execution time by **90%** and increasing data throughput for critical financial operations.
- **Configured and managed server-level traffic** to ensure high availability and optimal load distribution across applications, preventing outages during peak loads.
- **Technologies:** Java, Spring Boot, Oracle, Struts2, jQuery, Oracle Web Server.

CHAIN-SYS INDIA PVT., LTD., Chennai | Software Developer | July 2016 – March 2019

- **Developed robust ETL tools** for **Big Data migration**, successfully transferring **10 TB of data** and improving data processing efficiency by **70%**.
- **Provided Level 1/2 run support** for Appconnect and Appmigrate applications, ensuring continuous data integration and operational stability for key clients.
- **Developed and maintained** manual batch jobs to support critical production releases and large-scale data processing tasks.
- **Performed in-depth analysis** of production application heap and thread dumps, identifying root causes of performance bottlenecks and implementing solutions that **improved stability by 95%**.
- **Technologies:** Java, Big Data Ecosystem (e.g., Hadoop, Spark), SQL.

SB TECHNOLOGIES, Coimbatore| Junior Engineer | June 2015 – July 2016

- **Developed C programs** tailored to specific industrial needs, optimizing operational processes and enhancing system functionality.
- **Contributed to low-level programming tasks** utilizing Assembly Language and C for embedded systems.
- **Technologies:** Assembly Language, C.

Education

B.E in Electrical and Electronics Engineering | 2012 - 2015

Anna University | Tamil Nadu, India
