Swarnendu Dutta

swarnenduduttas@gmail.com|+919556373419

Software Engineer

Software Engineer | 10+ Years Experience in Backend & Cloud-Native Development | Java, Spring Boot, Microservices.
Proven track record in building scalable, secure, high-performance applications using backend technologies. Experienced in Agile delivery, cross-functional collaboration, and team mentoring to deliver enterprise-grade products with strong analytical and communication abilities and a commitment to continuous learning.

KEY SKILLS

Software Development| Agile Methodologies| Problem Solving| Object-Oriented Design| Software Testing and Debugging| Continuous Integration and Deployment (CI/CD)| Documentation and Technical Writing| Team Collaboration

TECHNICAL SKILLS

Languages:	Java, Kotlin
Frameworks:	Quarkus, SpringBoot, Microservices, Hibernate, Mockito, Kafka
Deployment:	Kubernetes, Docker
Tools:	Eclipse IDE, Maven, Postman, SoapUI, JMeter, Putty, Helm, Jenkins
Servers:	Tomcat, Jetty, WebSphere App Server
Version Control:	Bitbucket, Github, Gitlab CI/CD, AzureDevOps
Operating System:	Windows, Mac OS, Unix
Database:	OracleDb, MongoDb, PostgreSQL
Web service:	RESTful, GraphQL
Cloud :	MS Azure

PROFESSIONAL EXPERIENCE

STANDARD CHARTERED, Bangalore | Senior Engineer	Aug 2023 - Present
MAERSK GSC, Bangalore | Software Engineer	Dec 2021- July 2023
BRITISH TELECOM, Bangalore |Software Engineering Professional	Sep 2019- Dec 2021
CAPGEMINI, Bangalore | Associate Consultant	Mar 2018- Sep 2019
INFOSYS, Bhubaneswar | Senior System Engineer	Oct 2014- Feb 2018

MAJOR PROJECTS

Customer 360

Role : Backend Team Lead

Led the design and development of platform that aggregates customer data and documents from multiple banking sources — including personal details, transactions, residence, employment, relatives, and purchase history — into a unified portal. Enabled fraud and anti-money laundering analysts to investigate individuals and organizations for potential money laundering, fraudulent transactions, or terrorism financing.

- Directed backend development from inception using **Kotlin**, later migrated to **Java 21** with **Quarkus** framework, delivering a high-performance, cloud-native application.
- Designed and exposed secure APIs via both **RESTful** and **GraphQL**, enabling flexible data access for diverse analytical use cases.
- Deployed services using **Azure Pipelines** and **Azure DevOps**, ensuring reliable CI/CD workflows.
- Collaborated closely with the **UI team** to achieve seamless integration between frontend and backend components.
- Built and scaled the engineering team by conducting interviews, hiring suitable candidates, and mentoring junior developers.
- Conducted **PR code reviews** to uphold coding standards, maintain quality, and enforce best practices.

Modular Contracts

Role : Backend Developer

Designed and implemented a scalable Contract Lifecycle Management (CLM) platform enabling users to log in, create modules, and add clauses collaboratively. Supported multi-user clause reviews, contract assembly and secure digital signing.

- Developed a **Contract Lifecycle Management solution** from scratch using **Java 17, Spring Boot** and **Microservices**, streamlining contract creation and digital signing with **DocuSign**.
- Implemented **OAuth2** authentication to secure multi-user access and ensure compliance with enterprise security standards.
- Implemented **scalable data models** with **MongoDB** and **Azure Cosmos DB**, supporting multi-tenant enterprise deployments.
- Designed **real-time messaging workflows** via **Kafka** and **Azure Event Hub**, improving collaboration and contract turnaround times.
- Strengthened product quality with **BDD integration tests** (Cucumber, Gherkin) and **JMeter** performance testing embedded in **Azure DevOps** pipelines and used **Datadog** to reduce mean time to resolution for production issues.

IIP-Microservices

Technology: Java 11, Spring Boot, Microservices, Docker, Kubernetes, GitLab CI/CD, MongoDB, ELK, Helm.
Role: Developer(Design & Development)
Client: British Telecom
Responsibilities handled:

- Develop code using **Java 11** and **Spring Boot**.
- Followed **12 Factor app** principles while developing services following **Microservices** architecture.
- Designing low-level (**LLD**) and high-level (**HLD**) architecture for the services based on requirements and following **SOLID** design principles.
- Perform unit test and integration test using **jUnit5** and **Mockito** framework.
- Performance and load testing using **JMeter**.
- Used **Docker** to create image of application.
- Used **GitLabCI/CD** pipeline for deployment in **Kubernetes** cluster.
- Monitor logs using **ELK**

FALCON-Gateway

Technology: Java 8, Spring MVC, JMS, IBM MQ, IBM WebSphere App Server, Bitbucket, Putty, OracleDB
Role: Developer(Design & Development)
Client: ANZ Bank
Responsibilities handled:

- Development application using **Java 8** and **Spring MVC** framework following **SOLID** principles.
- Implemented various java **Design Pattern**.
- Created java listeners pointing towards **IBM MQs** for consuming messages in **XML** format.
- Wrote java classes to using JMS to produce messages and send it towards **IBM MQs** using **XML** format**.**
- Creating tasks in **Jira** and developing code according to stories.
- Fetching data from **OracleDB** by calling stored procedure and wrote **SQL** queries.
- Unit testing using **jUnit** , **PowerMockito** , **Mockito**.
- Deploying **EAR** in **IBM WebSphere App Server** using **Udeploy** application.
- Monitoredserver logs in **UNIX** environment
- Version control using **Bitbucket**
- Followed **Agile** methodology and participated in **Scrum** and **Sprint** planning.

SHIFU RE-QUOTES

Technology: Java 8, Spring MVC, RESTful, JSON, Oracle DB, Unix, Postman, Putty, Mockito, Github, Hibernate
Role: Developer
Client: Apple Inc.
Responsibilities handled:

- Development application using **Java 8 and Spring MVC** framework.
- Exposing endpoints following **HTTP RESTful** protocol and **JSON** structure.
- Interacting with **Oracle DB** using stored procedure.
- Creating tasks in **Jira** and developing code according to stories.
- Wrote unit test case using **Mockito**.
- Local testing using **Postman**.
- Deploying **.war** in **Unix** server.
- Followed **Agile** methodology and participated in **Scrum** and **Sprint** planning
- Version control using **Github**

CERTIFICATION

2025 GitHub Copilot Certification

EDUCATION

2014 W.B.U.T | Bachelor of Technology (Electronics and Instrumentation)
