Professional Overview

- Dynamic professional with over 8 years of experience as a Software Engineer specializing in developing state-of-the-art software modules for E-Learning products and virtual network platforms.
- Completed a professional training program at Infosys Spark IT Training, acquiring valuable skills and knowledge.
- Proficient in all phases of the software development lifecycle, from analysis and design to coding, testing, and implementation.
- Deep understanding of Object-Oriented Principles, Object-Oriented Analysis, Design, and Design Patterns.
- Skilled in J2EE programming and well-versed in UI technologies, including HTML, JavaScript, jQuery, React, and CSS.
- Highly results-oriented, a diligent worker with a strong enthusiasm for learning and adapting to new technologies.

Strategic Strengths

Java	Multi-Threading	Object-Oriented Programming (OOP) Concepts
Design Patterns	Spring Framework (Spring MVC)	Spring Boot
REST Web Services	gRPC	BPEL (Business Process Execution Language)
Functional Programming	UI Technologies: HTML, JavaScript, jQuery, React, and CSS.	Documentation (User documents, Developer documents, and Functional documents).
Code Review and Code Checking.	Design Pattern Implementation.	Microservices

Professional Experience

Organisation	***Position***	***Duration***
TransUnion	Developer	May 2022-Till Date
Cognizant	Associate	May 2018-April 2022
IDC Technologies	Software Engineer	Jan 2018-May 2018
digiBlitz Technology	Junior Software Engineer	Oct 2015-Dec 2017

RESPONSIBILITIES HANDLED AT TRANSUNION

Project Name- Credit Service
Client-CIBIL
Roles and Responsibilities • Analyzing on the given Features for each PI and preparing LLD. • Providing estimation for the analyzed feature. • Delivering code on the estimated time. • Fixed the bugs raised by the QA team. • Maintained Code review and Code checking process. • Following Scrum methodologies to work on created User stories, Bugs and Tasks.
Technologies-Java
Framework- Spring Boot, Rest Webservices, gRPC, Spock framework, Cucumber, Kafka.
Tools-Git, Rally, Confluence, Putty, Postgres Developer.
Application Server- Embedded Tomcat
Project Highlights:
May 2022– Present
• Engaged in the development and ongoing maintenance of backend Microservices.
• Worked on Core Online, a platform housing multiple applications aimed at assisting banks and other vendors in obtaining CIBIL scores for requested subjects.
• Adopted a Test-Driven Development (TDD) approach as a Developer.
• Participated in daily SCRUM meetings and collaborated with clients to gather requirements and discuss solutions.

• Provided support for Quality Assurance (QA) and User Acceptance Testing (UAT) to ensure the successful launch of the product in a production environment.

RESPONSIBILITIES HANDLED AT COGNIZANT

Project Name- VNSP
Client- Verizon
Roles and Responsibilities • Getting the requirements from my manager and working on analysis, design and development. • Preparing LLD for the given requirements. • Fixed the bugs raised by the QA team. • Maintained Code review and Code checking process. • Following Scrum methodologies to work on created User stories, Bugs and Tasks
Technologies- Java
Framework- Spring Boot, Openstack, Rest Webservices, JUnit
Tools- Git, Eclemma, Swagger, Jira, Confluence, Putty, Oracle Developer.
Application Server- Embedded Tomcat
Project Highlights:
May 2018-April 2022
• Engaged in the development and ongoing maintenance of backend Microservices.
• Worked on SDN platform to create SD-WAN VNFs and VMs in Cloud and On-Premise.
• Adopted a Test-Driven Development (TDD) approach as a Developer.
• Participated in daily SCRUM meetings and collaborated with clients to gather requirements and discuss solutions.
• Provided support for Quality Assurance (QA) and User Acceptance Testing (UAT) to ensure the successful launch of the product in a production environment.

RESPONSIBILITIES HANDLED AT IDC TECHNOLOGIES

Project Name- GBM
Client- Indian Postal and Payment Bank (IPPB)
Position- Software Engineer **Organization** Accel Frontline Pvt. Ltd.
Location- Chennai
The Project Responsibilities • Analysis of functional modules of online product to support Government banks and preparation of User documents, Developer documents and Functional documents. • Implemented Design Pattern in our Product. • Cleared the bugs raised by the Testing team. • Developed the Business Requirements given by Business team. • Maintained Code review and Code checking process.
Technologies- Java, J2EE, JavaScript, HTML, CSS and SOAP Webservice.
Tools- Oracle Developer.
Application Server- Resin 4.0.2
Project Highlights:
2018 January – 2018 May
• Contributed to the development of a multi-tier web application for a Government Business Module in the role of a Software Engineer.
• Leveraged technologies including Java, J2EE, JavaScript, HTML, CSS, Oracle, and SOAP Web services.
• GBM is a Government Business Module which supports Government Banks.

RESPONSIBILITIES HANDLED AT DIGIBLITZ TECHNOLOGY

- Engaged in multi-tier web application development for an E-Learning system and the base platform as a Product Developer for the past 2 years and 7 months. Utilized technologies such as Java, J2EE, JavaScript, jQuery, HTML, CSS, MS SQL, SOAP Web Services, and BPEL.

Project Name- smartLehren Client Product Development
Position Developer–Trainee Software Engineer
Organization- digiBlitz Technologies
Location- Chennai
The Project Responsibilities • Analysis of functional modules of E-Learning system and preparation of User documents, Developer documents and Functional documents. • Implemented Design Pattern in our Product. • Cleared the bugs given by the Testing team. • Developed the Business Requirements given by Business team. • Maintained Code review and Code checking process.
Technologies- Java, J2EE, JavaScript, jQuery, HTML, CSS
Tools- Eclipse (Indigo), SQL Developer.
Application Servers- Jboss, Apache Tomcat.

Project Highlights:

2015 October – 2016 August

• smartLehren serves as an E-Learning Management System designed to cater to the needs of a University/College, offering a range of functionalities. It is a Cognitive Learning platform that brings education directly to the learner's home.

• This system combines Process Automation with a robust pedagogical environment, providing an empowering educational experience.

• The system encompasses various departments, including Administration, Finance, and Education. The primary administrative role holds control over all sub-roles.

• In accordance with the University's procedures, Program mentors assume the role of the head of specific programs. Each program has Course mentors responsible for individual courses and their respective assigned students.

• Report Management is available for generating reports, both for the management team and the students. Additionally, the system includes several modules that facilitate various other operations.

• Role Management plays a pivotal role in overseeing all other management functions, and it falls under the purview of the admin, who possesses the authority to create additional roles and govern the entire system.

Project Name- ELMT Client Products

Position Developer- Junior Software Engineer

Organization- digiBlitz Technologies

Location- Chennai

The Project Responsibilities • Writing Business Logic and providing the API to our Product team. • Solving problems in our product and fixing issues and clearing path for our System Integrators. • Developed a complete Online Test System. • Maintaining third party tools which has been integrated in our Product. • Implemented SOAP web-services to start a BPEL process. • Giving short presentation about our Product to our Business team. • Preparing documents for the API for the System Integrators. • Maintained Code review and Code checking process.

Technologies- Java, J2EE, JavaScript, jQuery, HTML, CSS, Web-services, BPEL Tools Eclipse (Indigo), SQL Developer.

Application Servers- Jboss, Apache Tomcat.

Project Highlights:

2016 September – 2017 December

• ELMT (Enterprise Landscape Management and Transformation) serves as the central platform overseeing all our products.

• Utilizing the Facade Design Pattern, ELMT operates as the core system, offering access to implementation details through APIs for clients.

• ELMT encompasses a range of services, including Role Management, Business Process Management, Artifact Management, and Learning Management.

• These four management modules are pivotal and available for clients in various scenarios.

• ELMT serves as the source for its subsystem, housing all the business logic classes and product implementations.

• As an enterprise-level application, it employs Enterprise Java Beans for managing business logic.

• ELMT is responsible for collecting and maintaining data related to our clients' contact details.

EDUCATION AND CERTIFICATIONS

- Bachelor’s Degree in “Computer Science and Engineering” in the year 2014
- Completed a course in “JSE, JEE, Oracle” at Naresh i Technologies, Chennai.
- Trained in INFOSYS Spark IT training from Talent Sprint, Chennai.
- Certified SAFe Practitioner 5 from Scaled Agile Inc.
- Completed Full Stack Developer certification in IIT Mandi.
