Neeraj Pandey

neerajpandey429@gmail.com

+919739476245

Skills

Languages – Java, Python

Framework – Spring Boot, Spring Rest, Spring cloud, Spring security, Spring Data JPA, gRPC, REST Web services, Design Patterns.

Architecture - Microservices, Distributed Systems, RESTful APIs.

Messaging – RabbitMQ, Kafka.

Containers & Cloud - Docker, Kubernetes, Helm, AWS

Database – MySQL, MongoDB

Build Tools – Apache Maven, Gradle, Shell scripting

DevOps & Tools - Jenkins, Git, SonarQube, Swagger, Postman, JIRA

Design Patterns – OOP design patterns, Microservices design patterns.

Data Structure & Algorithms

SDLC – SAFE, Agile

Education

- B.Tech (Electronics & Communication Enginnering), 70 % from Punjab Technical University.
- 12th CBSE Board (70%)
- 10th CBSE Board (70 %)

Recognition

- Excellence Award for on-time release, demonstrating strong ownership and collaboration.
- Excellence Award for delivering multiple critical product features within committed timelines.

Professional Summary

Senior Software Engineer with 9 years of experience in building scalable, highly available backend systems for enterprise and product-based platforms. Strong expertise in Java, Spring Boot, microservices, and Kubernetes. Proven track record of owning greenfield product development, designing distributed systems, and delivering production-grade solutions used by large-scale telecom and network management products.

Experience

OpenText - Senior Software Engineer
Dec 2024 - Present | Bangalore, India

Project – ITOM - NNMi (Network Node manager)

- NNMi (Enterprise Network Monitoring Platform) - Contributing to backend development and stabilization of NNMi, an enterprise-grade network monitoring product used by large customers to manage complex network infrastructures.
- Working on Java-based components to improve reliability, defect resolution, and performance in production environments.
- Collaborating with QA, support, and product teams to deliver customer-impacting fixes in release cycles.

CommScope Networks - Staff Software Engineer
Dec 2020 - Dec 2024 | Bangalore, India

Project – Service Orchestration Tool (So-Tool)

Service Orchestration Tool (So Tool) - Designed and developed a greenfield service orchestration platform using Spring Boot and microservices architecture.
- Built and owned 10+ Spring Boot microservices deployed on Kubernetes, supporting automated provisioning and lifecycle management of network services.
- Implemented secure, scalable REST APIs using Spring Boot and Spring Security, enabling reliable inter-service communication across distributed systems.
- Led multiple features from proof-of-concept to production, ensuring scalability, fault tolerance, and maintainability.
- Containerized services using Docker and standardized deployments using Kubernetes, improving deployment reliability and reducing manual intervention.
- Worked closely with product owners and architects to translate complex business requirements into scalable technical solutions.

- Improved deployment efficiency by ~75%, reducing gNB node and edge service installation time from ~4 hours to ~1 hour, by introducing a Spring Quartz–based scheduler to pre-pull Docker images during idle hours, ensuring faster and predictable installations.

Technologies:
Java, J2EE, Spring, Spring Boot, Spring security, docker, Kubernetes, gRPC, RESTful web services, AWS

Nokia Networks - R&D Engineer
April 2017 - Dec 2020 | Bangalore, India
Project – Nokia Net-Guard Network Security & Nokia CSD

- Developed Spring Boot–based microservices for enterprise-grade network security and charging systems. –
- Designed Docker images and Helm charts to enable consistent Kubernetes deployments across environments.
- Integrated RabbitMQ for asynchronous messaging, improving system decoupling and reliability in distributed components.
- Implemented FCAPS based alarm management features to support fault monitoring and operational visibility.
- Played a key role in transitioning product development ownership from Poland R&D to Bangalore R&D, acting as a technical liaison during knowledge transfer.

Technologies:
Java, J2EE, Spring, Spring Boot, Spring REST, Spring security, gRPC, docker, Kubernetes
