bharathnarasimman94@gmail.com

ABOUT ME

As a **Software Tester** with **3.6 years** of hands-on experience, I specialize in crafting and implementing robust testing strategies for diverse software applications. Proficient in both manual and automated testing methodologies, I am dedicated to upholding product quality standards. My commitment to ensuring customer satisfaction spans across multiple domains.

EDUCATION

- B.Tech
- SKP Engineering
- 2015

SKILLS

- Java
- Selenium WebDriver
- Cucumber BDD
- TestNG
- API Testing
- Postman , Rest Assured
- Appium
- Tricentis TOSCA
- Karate Framework
- Agile
- Manual , Automation & Mobile Testing
- Junit, POM, Data Driven
- JMeter , JIRA
- SQL , Oracle
- Eclipse
- Git & Git Hub
- Maven , Jenkins
- Windows Family & Linux

WORK EXPERIENCE

- NetXD inc.
- Feb 2024 - Aug 2024
- RADIIUSCARD SOLUTIONS PRIVATE LIMITED
- Jan 2021 - Feb 2024

PROFESSIONAL SUMMARY

- **3.6 years** of combined experience in 1.6 Years in Automation Testing and 2 Year Manual Testing.
- Proficiency in Mobile and API Testing, including Android, iOS, and REST-assured frameworks.
- Extensive experience in web automation using Selenium with Java.
- Expertise in UI Automation, enhancing test coverage and user interface validation.
- Strong skills in Java programming and OOP concepts.
- Experience in Oracle/MySQL DB Management for database-related testing.
- Proficiency in automation frameworks such as Cucumber BDD, TestNG, JUnit, POM, and Data- Driven frameworks.
- Familiarity with Build Automation tools (Maven) and Continuous Integration tools (Jenkins).
- Proficient in using Git and GitHub for source code management.
- Hands-on experience in defect tracking using JIRA.
- Knowledge of test case design techniques and effective test case writing.
- Implementation of unit testing using JUnit and TestNG Frameworks.
- Competency in various testing types (Smoke, Sanity, Regression).
- Experience in automating on cloud platforms such as Browser Stack for web and mobile testing.
- Involvement in Agile ceremonies, including Daily Scrum, Sprint planning, Sprint review,
- Retrospective, and reporting (Daily Status Reports, Weekly Status Reports, execution dashboards).
- Proficiency in cross-platform testing, ensuring compatibility and reliability across different devices and environments.
- Experience in generating comprehensive project insights through the creation of reports like Daily Status Reports, Weekly Status Reports, and execution dashboards.
- Strong familiarity with Agile methodologies and active participation in Agile ceremonies, contributing to efficient project delivery.
- Effective communication skills and collaboration with cross-functional teams to facilitate testing processes and defect management.

Project Worked

NetXD inc.

Project - 4 |Banking | Finwise **Feb 2024 - Aug 2024**

Worked on enhancing the FinWise Banking platform by performing comprehensive manual and automated testing on various modules, including account management, transaction processing, and security features. Ensured compliance with banking regulations, identified critical defects, and collaborated closely with development teams to improve system reliability and performance. Contributed to the successful deployment of multiple releases with a focus on delivering a seamless user experience.

Responsibilities :

- Design and develop automated test scripts using the Karate framework for validating RTP transaction workflows, ensuring that they meet functional and performance criteria.
- Execute manual test cases to verify RTP transaction processes, ensuring that edge cases, complex scenarios, and integrations are thoroughly tested.
- Create comprehensive test cases and scenarios based on business requirements and use cases for RTP transactions, ensuring coverage of all possible transaction paths.
- Perform API testing for RTP systems using the Karate framework, validating the accuracy of transactions, responses, and data integrity across systems.
- Log and track defects identified during testing phases in a defect management tool, providing detailed descriptions and working with developers to ensure timely resolution.
- Conduct performance testing of RTP systems to assess the speed, scalability, and reliability of transaction processing under various load conditions.
- Manage and prepare test data specific to RTP transactions, ensuring that test cases cover all necessary variations and conditions.
- Integrate automated test scripts into the CI/CD pipeline to ensure RTP transaction processes are validated with every build and deployment.
- Work closely with business analysts, developers, and other stakeholders to clarify requirements, provide feedback, and ensure the RTP system meets all business needs.
- Document all test activities, including test plans, test cases, execution reports, and defect logs, ensuring that all testing efforts are transparent and traceable.

RADIIUSCARD SOLUTIONS PRIVATE LIMITED

Project - 3 |E - Commerce| Clarks **May 2023 - Feb 2024**

- Clarks, a well-known footwear company, operates in the e-commerce domain. Clarks has a strong online retail presence, allowing customers to browse and purchase their footwear products through their e-commerce website.
- Their e-commerce platform showcases a wide range of footwear products, including shoes, boots, sandals, and accessories, catering to various customer preferences.
- Clarks focuses on providing a user-friendly and seamless online shopping experience, including features like product recommendations, size guides, and easy checkout options.

Responsibilities :

- Develop and maintain comprehensive automated test scripts using Selenium WebDriver and Java for critical application functionalities.
- Create and execute test plans, test cases, and test scripts to validate web application and API functionality, performance, and security.
- Collaborate closely with cross-functional teams, including developers, product owners, and business analysts, to understand and address requirements for thorough test coverage.
- Conduct API testing using Postman to assess data integrity, response times, and error handling in RESTful APIs.
- Integrate automated tests seamlessly with CI/CD systems like Jenkins, ensuring efficient execution and report generation.
- Perform regression testing to ensure application stability and reliability by retesting existing features and verifying bug fixes.
- Execute mobile testing using Appium, automating tests for mobile applications across various devices and platforms.
- Implement behavior-driven development (BDD) using Cucumber to create human- readable acceptance tests, fostering collaboration and shared understanding among stakeholders.
- Actively engage in code reviews, providing constructive feedback to enhance test scripts and maintain code quality standards.
- Validate the performance of web applications and APIs to ensure they meet established criteria.
- Continuously improve and update automated test scripts to adapt to evolving application features and requirements, promoting ongoing quality assurance.

Project - 2|Healthcare| Froedterk Health — Mar 2022 - Apr 2023

- Froedtert Health is a healthcare organization that operates in the healthcare domain.
- Froedtert Health is a network of hospitals and healthcare facilities, providing a wide range of medical services and specialties to patients in the region.
- The organization is dedicated to delivering high-quality patient care, including medical treatment, surgery, diagnostics, and preventive healthcare services.
- Froedtert Health often collaborates with educational institutions and conducts medical research, contributing to advancements in healthcare and medical knowledge.

Responsibilities :

- Develop and maintain automated test scripts using Selenium WebDriver and Java for web application testing.
- Focus on critical application functionalities to ensure comprehensive test coverage.
- Create and execute test plans, test cases, and test scripts to assess functionality, performance, and security.
- Work closely with cross-functional teams, including developers, product owners, and business analysts, to understand requirements and achieve comprehensive testing.
- Utilize tools like Postman to conduct API testing, verifying data integrity, response times, and error handling within RESTful APIs.
- Seamlessly integrate automated tests with CI/CD systems like Jenkins to enhance testing efficiency, execution, and report generation.
- Dedicate efforts to regression testing to ensure application stability and reliability by retesting existing features and validating bug fixes.

- Implement data-driven and parameterized test scripts using TestNG to handle diverse test scenarios and input data sets effectively.
- Actively engage in code reviews, providing constructive feedback to enhance test scripts and uphold code quality standards.
- Contribute to the overall software product's quality by ensuring high-quality test scripts.
- Include security testing in your test plans to assess the security of web applications and APIs.
- Extend your testing to cover performance aspects, ensuring that the application performs well under various conditions.

Project - 1|Transportation and Logistics|BBD International **Jan 2021 - Feb 2022**

- BDP International is a global logistics and transportation company operating in the transportation and logistics domain.
- BDP International has a widespread presence and offers transportation and logistics services on a global scale, including freight forwarding, supply chain management, and customs brokerage.
- The company specializes in providing customized supply chain solutions to meet the unique needs of its clients, optimizing the movement of goods and materials across various industries

Responsibilities :

- Collaborate closely with the development team to understand project requirements and formulate comprehensive test plans and strategies.
- Create and execute manual test cases to validate software functionality and ensure compliance with project specifications.
- Employ exploratory testing techniques to proactively uncover potential defects and usability issues within the software.
- Identify, document, and report bugs and issues encountered during testing using a bug tracking system such as JIRA.
- Actively participate in daily stand-up meetings to provide progress updates on testing and address any challenges or obstacles.
- Work in tandem with developers to replicate and troubleshoot reported issues, providing precise reproduction steps and relevant logs or screenshots.
- Establish and maintain test data and environments that simulate real-world scenarios, ensuring comprehensive test coverage.
- Collaborate with cross-functional teams, including business analysts and product owners, to clarify requirements and ensure thorough test coverage.
- Conduct regression testing to confirm that previously resolved defects or newly implemented features do not introduce new issues.
- Continuously improve testing processes by identifying and implementing automation opportunities, using tools like JMeter, and advocating for Agile methodologies.
- Actively contribute to the overall quality assurance efforts of the team, promoting a culture of quality and excellence.
- Stay updated on industry best practices and emerging trends in software testing to enhance your skills and knowledge.
