Stella K

Tirunelveli, Tamil Nadu

kstell528@gmail.com

+91 9677720997

Around 2.9 years of experience in Software testing with sound knowledge on Testing Techniques, Test Planning, Validation, Test Evaluation and Documentation. Strong in Manual Testing and Automation Testing with good knowledge in coupled with good experience in managing teams. Committed to delivering bug-free products through thorough testing and collaboration with cross- functional teams.

PROFESSIONAL SUMMARY

• Expertise in Test case creation, execution, and defect management.

• Proficient in using Azure DevOps and JIRA for issue tracking and progress monitoring.

• Skilled in performing various types of testing, including regression, functional, system, and integration testing to ensure comprehensive software validation.

• Experienced in clearly communicating test results and defects, helping teams resolve issues efficiently and ability to coordinate with End to End testing.

• Well versed with all stages of Software Development Life Cycle (SDLC) and Software Testing Life Cycle (STLC).

• Experience in executing SQL DB queries in order to view successful transactions of data and for validating data.

• Worked in MongoDB to optimize database performance, and for executing CRUD operations.

• Experienced in API testing using Postman like test case creation, response validation, and working with HTTP methods like GET, POST, PUT, and DELETE.

EDUCATIONAL QUALIFICATION

M.Sc IT and Networking Jun 2020 – May 2022

St. John's College (Tirunelveli)

Bachelor of Computer Application Jun 2017 – Apr 2020

St. John's College (Tirunelveli)

CERTIFICATION

- TypeWriting

KEY SKILLS & EXPERTISE

- Manual & Automation Testing.
- Testing Tools: Eclipse, Selinium, Postman
- Defect Tracking: Azure DevOps, JIRA
- Database Testing: Postgres SQL, SQL Server, MongoDB
- API Testing: Proficient in GET, POST, PUT, DELETE using Postman
- Cross-Functional Collaboration
- Software Development & Testing Life Cycle (SDLC & STLC)
- Communication & Reporting.

PROFESSIONAL EXPERIENCE

Global Software Solutions | Tirunelveli Jun 2022 – Present

Currently working as a Software Test Engineer in Global Software Solutions, Tirunelveli

PROJECTS

NPSS (National Payment Systems Strategy)

National Payment Systems Strategy (NPSS) or UAE Instant Payment Platform (IPP) is designed to make payment systems universally interoperable and faster the transaction to a cashless society built around realtime. It is the Instant Payment Platform (IPP) that enables real-time faster payments and funds transfers and digital payments across the UAE financial sector.

PROJECT RESPONSIBILITIES

- Led manual testing for the UAE Instant Payment Platform (IPP) for outward and inward payments, which supports P2P (Person to Person), P2B (Person to Business) and IBAN – to – IBAN transfers, ensuring seamless,real-time transactions across the UAE financial sectors.
- Executed end to end testing and comprehensive API testing for P2P, P2B and IBAN to IBAN flows, ensuring users could transfer fundss ecurely and instantly.
- Tested the manual initiation process of transaction reversal within the National Payment Systems Strategy (NPSS), enabling funds to be reversed to the sender's account using Automation Testing.
- Managed testing for batch payment processing for ensuring secure and efficient processing of large volumes of payments.

• Ensured that the platform complied with PCI-DSS and tested fraud detection mechanisms and secure transaction processes for real time payments.

• Used Putty to access remote servers and validate transaction logs for both batch and real- time payments, ensuring accurate logging, transparency, and compliance with financial regulations.

TORUS

Torus is low code tool which is a development environment that contains data fabrics, UI fabrics and process fabrics that enables users to create applications with minimal hand-coding. Instead of writing extensive code, can use visual interfaces, drag-and-drop tools, and pre-built components to build apps quickly.

PROJECT RESPONSIBILITIES

• Tested Data Fabric in Torus by validating data integrations from multiple sources (e.g., databases, APIs, stream and file) and ensuring data consistency and accuracy across applications.

• Tested user interfaces built with UI Fabric to ensure responsiveness, usability, and cross- platform compatibility, improving the user experience across different devices and browsers.

• Tested business process automation workflows within Process Fabric, ensuring accurate execution of decision trees, business rules, and logic with minimal manual intervention.

• Validated end-to-end process automation scenarios in Process Fabric, ensuring correct flow of tasks and integration with other fabrics (data and UI).

• Tested and validated deployment pipelines using Continuous Deployment Fabric (CDF) to automate and streamline application releases, ensuring smooth and error-free deployments.
