Arpit Batra

EMAIL – batra1990@gmail.com Cell - 9560055606

Summary

Arpit Batra is a Senior Manager with Morgan Stanley, working as **Tech Lead and an Active Backend Developer** for the squad. He joined Morgan Stanley in Jan 2019 and has led several projects including developing applications from scratch and working on existing complex apps which encompassed the full software development cycle in agile driven environment. As a result of this work, he has valuable experience in designing, implementing and maintaining data driven, object oriented and micro service-based system.

In addition to his technical expertise, Arpit has gained holistic understanding of the lifecycle of Corporate Actions and to further his interest in financial domain he went through extensive curriculum of CFA U.S and cleared all three levels in first attempt only.

Skills	
Languages	Core Java 8, SQL
Frameworks	REST, Spring 4.0, Mockito, Spring Boot, JUnit
Basics	Design Patterns, Algorithms, Data Structures
Practices	Agile

Education

B.E, ECE, 2012, **Thapar University**, Patiala CGPA – 7.54/10

Additional Details

- Completed **CFA (U.S)** program in **1.5 years** by clearing all the exams in **first attempt** only.
- Secured 99.33 percentile (**AIR-5297**) in All India Engineering Entrance Examination(AIEEE)

Work Experience

Morgan Stanley, Senior Manager, Tech Lead, Jan 2019 To Present

Roles and Responsibilities

- My Primary role is of **Tech Lead** and an **active backend developer**.
- Make sure that we are developing scalable, performant and maintainable application.
- Collaborate with stakeholders, business and Technical Architects to ensure that the Solution is accurate to deliver outcomes to the client and reliable from a technology perspective.
- Mentor the squad in functional as well as technical areas.
- Lead others toward technical accomplishment and build up a collaborative team environment.
- Work with clients to understands the bottlenecks of system to come up with solutions to reduce the manual work and increase straight through processing.
- Beside being a tech lead I work as an active developer, **primarily working on middle layer as well as database but also contributing to frontend** when required.
- Additional to above roles I'm working as a scrum master as well for more than 2 years and primary objective is to assure that squad is performing at its best, mentoring team members, managing expectation of PO (Product Owner), setting up process for areas of improvement, drive all the agile ceremonies, represent squad at fleet meetings and share the learnings.

Milestones

- Delivered a project supposed to be worked upon by 3 people, single handedly in the same timeframe.
- Led and delivered a time critical mandatory regulatory project by meeting all the deadlines. That project was a major enhancement in an existing application of which whole squad has bare minimum idea. Made sure to understand the application by going through the documents and code and sharing that knowledge with that squad in timely manner.
- Led and delivered multiple projects for different markets of ASIA and EMEA to increase the straight through payment by understanding the complexities of markets.
- Ideated, Developed and Delivered a crucial project to reduce the day-to-day work done outside of system and provided functionality within the system to handle the complete lifecycle.

Recognitions

- Got the **best possible year end rating** last year and second best the year before.
- Have been recognized by multiple quarterly awards for Going above and beyond, leadership and excellent delivery.
- Have been appreciated numerous times for my ability to adapt, be it learning new technologies or understanding exiting complex application by myself.

Sapient, Sr. Associate, Client – Morgan Stanley, Apr 2016 To Dec 2018

Project 1 – Corporate Action Processing – Java, SQL, Spring, MQ's, JXB, REST, Dot net, Pl Scripts.
Existing applications of firm which fully process both voluntary and mandatory corporate actions on equity positions for Institutional clients (ISG).

Roles and Responsibilities

- Drive the assigned enhancements from design to implementation to user sign off, enhancements are raised either to adopt to regulatory change or user requirement to automate some task, add new functionality or reduce breaks.
- Gasped the functionality of multiple critical modules by going through the code and few presentations by myself with no knowledge transfer and currently driving most of enhancements for those modules from Mumbai and mentoring few resources on those modules.
- Drove 3 technically complex enhancements from conceptual stage to delivery in initial six months under leadership of our Onshore SME, with successfully meeting all the timeframes.
- Recognized as a responsible and resourceful contributor and was given a chance to work on few modules of new strategic platform.

Project 2 - Corporate Actions for Wealth Management – Java, SQL, Spring, Rest, Angular

Java based web application developed completely from scratch to partially process voluntary corporate actions for wealth management (WM) clients.

Roles and Responsibilities

- Sole resource responsible for core backend development of web services and respective procedures.
- Perfectly tune all the queries as data was present in mainframe DB and app DB is step up on distributed side.
- Provided critical input for the design of app DB schema.
- Designed workflow to implement reviewer and approver process once a user has processed any corporate action

IBM India, Application Developer, Apr 2015 To Mar 2016

Project – Reporting Tool for Order Booking System – Java, Struts 2, SQL

Reporting application for its upstream application to view delayed orders up to last 3 years.

Roles and Responsibilities

- Sole resource responsible for core backend development of new reports and enhancements to accommodate changes of upstream application.

- Grasped all the functionality of project in minimal time which included understanding the workflow, DB model and scripts, and drove multiple critical release single handedly.
- Wrote complex SQL queries for new reports and modified existing queries to improve the response time.

CenturyLink India, Software Engineer, Aug 2012 To Mar 2015

Project 1 – Order Booking System – Oracle forms, SQL

Standalone application to validate the customer's location, identity, and availability of resources for new order coming to CenturyLink for Broadband and then actually provide services to user.

Roles and Responsibilities

- Solely Responsible for requirement gathering from on-site coordinator and core-backend development including requirement analysis, designing, coding and unit testing for 1 of the 3 modules.
- Worked on two major enhancements with an aim to reduce the frequency of data tickets so as cut down number of data tickets resources and to speed up the process for clients by reducing dependency.

Project 2 – Project Matrix Tool – Java, Spring, SQL

An Internal role based tool for project management. It contains various reports which are being used at management level like metric's report, project effort, various project KPIs, resources and other details.

Roles and Responsibilities

- Core backend development for new reports and provide fixes to the existing issues on quarterly basis
